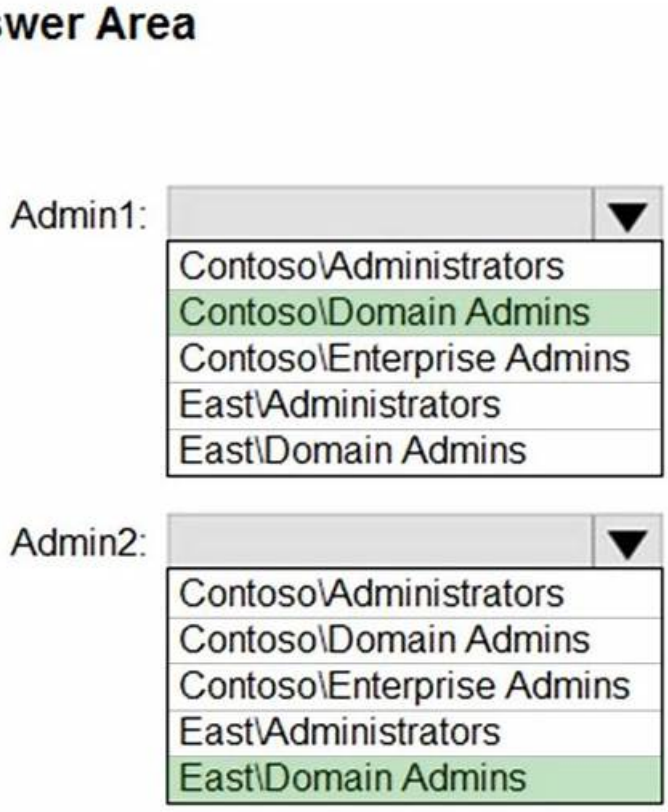
800-150 Free Braindumps & Latest 800-150 Exam Experience



2026 Latest TestkingPass 800-150 PDF Dumps and 800-150 Exam Engine Free Share: https://drive.google.com/open?id=15c5ljUR3a-jbqGuOYbInwpcZXiMu96Xe

To find better job opportunities you have to learn new and in-demand skills and upgrade your knowledge. With the Supporting Cisco Devices for Field Technicians 800-150 Exam you can do this job nicely and quickly. To do this you just need to get registered in the TestkingPass Supporting Cisco Devices for Field Technicians exam and put all your efforts to pass this challenging Supporting Cisco Devices for Field Technicians exam with good scores. However, you should keep in mind that the Supporting Cisco Devices for Field Technicians exam is a valuable credential and will play an important role in your career advancement

Cisco 800-150 Exam Syllabus Topics:

Topic	Details
Topic 1	• Cisco Infrastructure and Collaboration Infrastructure: This section of the exam measures the skills of a Collaboration Engineer and focuses on Cisco infrastructure devices, endpoints, and collaboration technologies. It introduces network devices, collaboration endpoints like IP phones and video systems, and explains on-premises collaboration deployments using tools like Cisco Unified Communications Manager. It also covers how video systems integrate into collaboration environments and highlights Cisco's cloud services for enterprise communication, including Webex Meetings, Webex Teams, and hosted collaboration solutions.

Topic 2	• Networking Foundations: This section of the exam measures the skills of a Network Engineer and covers the basic building blocks of computer networking. It explains different types of networks like local area networks and wireless networks, and introduces lightweight wireless LANs. It describes the layers of communication models like the OSI model and TCP • IP stack, and explains how data moves across networks. It also discusses the physical cabling used in networks, such as Ethernet and fiber optics. Students will learn about network switching, IP addressing, subnetting, and routing at Layer 3. The section also introduces Cisco's campus network devices, data center switches, UCS servers, and collaboration devices, describing their roles and functions in the network.
Topic 3	• Cisco UCS and Data Center Architecture: This section of the exam measures the skills of a Data Center Engineer and introduces Cisco's UCS and data center solutions. It explains the devices found in a data center, including switches, UCS servers, and director switches, and describes different server deployment models. Students will also learn about virtualization components like virtual machines, hypervisors, cloud computing concepts, and deployment models. The section covers how Cisco UCS devices fit into campus networks, edge locations, and data centers, and explains the key components and connections used in UCS architecture.
Topic 4	• Cisco Software: This section of the exam measures the skills of a Network Engineer and discusses Cisco's software systems and licensing. It explains the difference between IOS install and bundle modes and gives an overview of different licensing models. Students learn how to manage Cisco software images, including backing up, transferring, and installing images via FTP, TFTP, or USB. It also covers how to handle configuration files to keep devices running properly and ensure smooth upgrades or replacements.

Latest 800-150 Exam Experience, 800-150 Pdf Demo Download

We are all well aware that a major problem in the industry is that there is a lack of quality study materials. Our 800-150 braindumps provides you everything you will need to take a certification examination. Details are researched and produced by 800-150 Dumps Experts who are constantly using industry experience to produce precise, logical verify for the test. You may get 800-150 exam dumps from different web sites or books, but logic is the key.

Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q41-Q46):

NEW QUESTION # 41
Which step must be performed immediately after powering off the device when replacing a Cisco chassis?

- A. Remove the chassis ground.
- B. Remove the chassis.
- C. Label and remove all I/O cables.
- D. Back up the device configuration.

Answer: C

Explanation:
After powering off a Cisco device in preparation for chassis replacement, theimmediate next stepis tolabel and remove all I/O cables. This step is crucial to ensure that all connections can be accurately restored after the new chassis is installed.
Proper labeling prevents confusion and potential misconfigurations during reassembly. Only after all cables are safely disconnected should you proceed to remove the chassis ground and then the chassis itself.
Reference:Supporting Cisco Devices for Field Technicians (FLDTEC) - Maintenance and RMA Procedures

NEW QUESTION # 42
Which Cisco UCS management platform is specifically designed for managing standalone Cisco UCS C- Series rack servers and E-Series servers?

- A. Cisco UCS Central
- B. Cisco Integrated Management Controller
- C. Cisco Intersight
- D. Cisco UCS Manager

Answer: B

Explanation:
TheCisco Integrated Management Controller (CIMC)is the embedded management solution designed specifically forstandalone Cisco UCS C-Series rack servers and E-Series servers. It allows administrators to perform out-of-band management functions such as BIOS configuration, firmware updates, remote console access, and power control.
* Cisco UCS Manageris used for managing UCS blade chassis environments.
* Cisco UCS Centralis intended for centralized management across multiple UCS domains.
* Cisco Intersightis a cloud-based management platform that can extend CIMC functionality but is not the embedded, standalone option.
Reference:Supporting Cisco Devices for Field Technicians (FLDTEC) - Cisco Equipment and Related Hardware

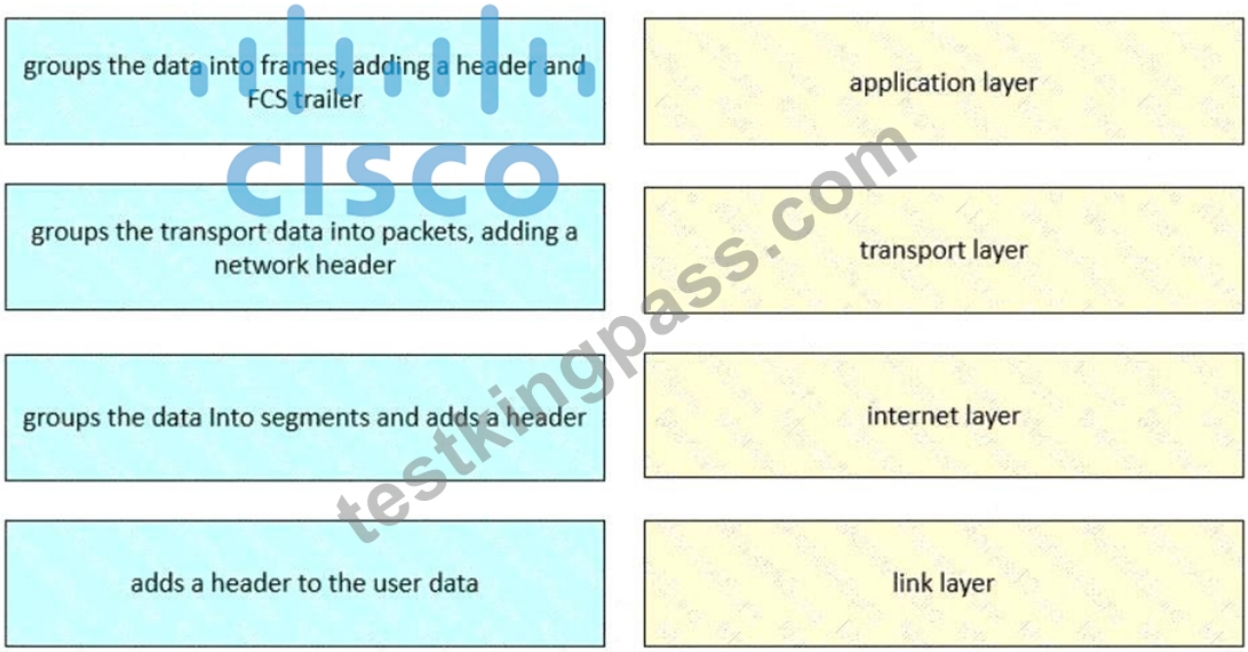
NEW QUESTION # 43
Drag and drop the tools from the left onto the corresponding primary functions on the right.

Answer:

Explanation:

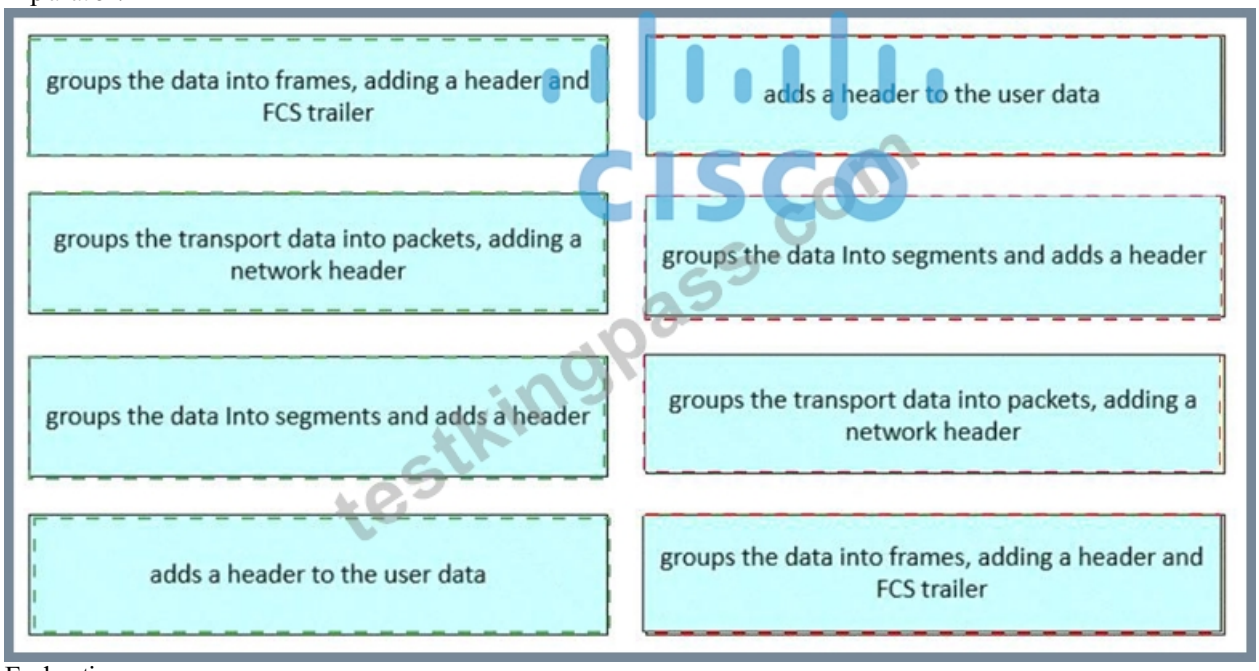
Explanation:
In theFLDTEC curriculum, technicians are trained on physical tools essential for support in the field. These tools and their uses are explained as follows:
* Flash Card Reader:Used with removable CompactFlash cards commonly found in older Cisco routers and switches. These cards hold the IOS image or config files.
* USB Thumb Drive:Used for transferring IOS files or configs directly to and from Cisco devices that support USB storage. Convenient for portable backups.
* RJ-45 Ethernet Loopback Connector:A diagnostic tool that loops the signal back into the port. Helps verify port functionality by simulating a live Ethernet connection.
* RJ-45 Coupler:Allows two patch cables to be connected, effectively extending the reach of a cable - useful in setups where a single cable is not long enough.

NEW QUESTION # 44
Refer to the exhibit. Drag and drop the steps in the TCP/IP encapsulation process from the left onto the corresponding layer on the right.

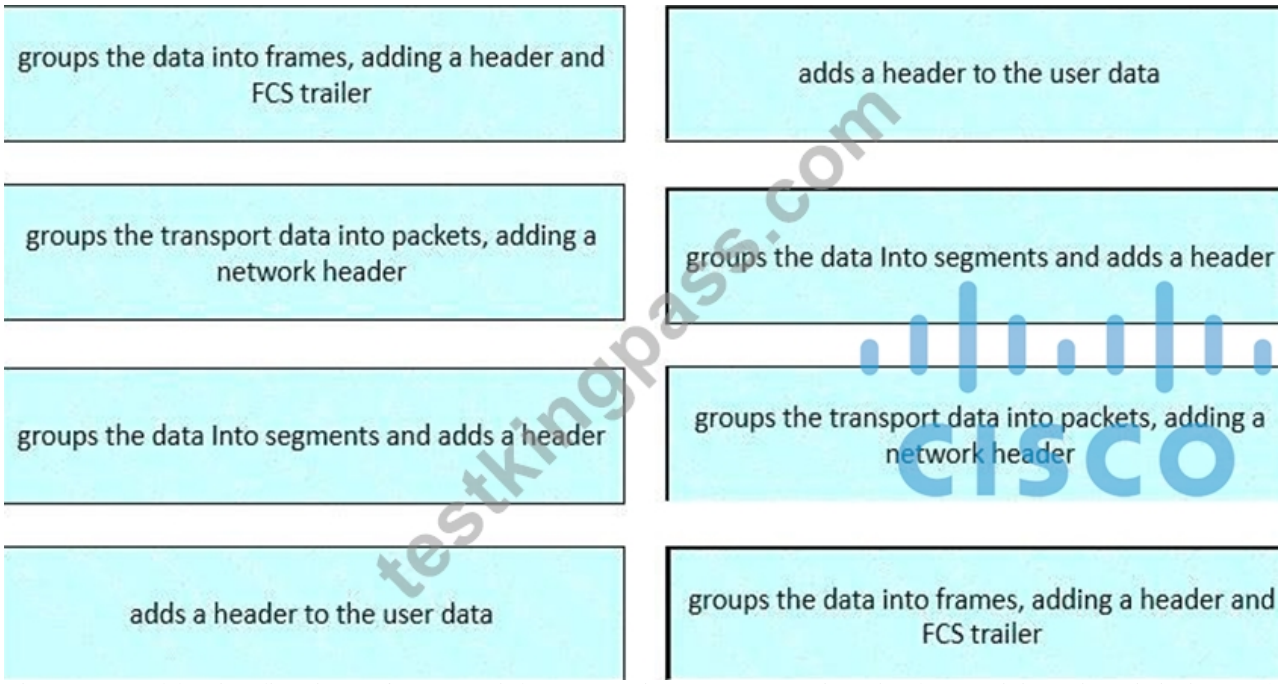


Answer:

Explanation:



Explanation:



TheFLDTECtraining describes theTCP/IP encapsulationas a step-by-step process where data is passed down through the layers of the TCP/IP model:
Application Layer: User data is created (email, file, request) and the application layeradds the application header, creating a data payload.
Transport Layer: The data is segmented. Each segment receives a transport-layer header (TCP/UDP), enabling proper sequencing and error handling at the destination.
Internet Layer: Segments are encapsulated intopackets(IP datagrams), with an IPheader added to facilitate routing between networks.
Link Layer: Finally, packets are framed with Layer 2 headers and trailers (including theFrame Check Sequencefor error detection), creating aframeready to be transmitted on the physical medium.
This layered encapsulation ensuresinteroperabilityandtroubleshooting clarity, which is why it is emphasized inFLDTEC's IOS Software Basics module.

NEW QUESTION # 45
Refer to the exhibit. Drag and drop the names of the field-replaceable units from the left onto the corresponding letters on the image of the Cisco Catalyst 9400 modular switch.

Answer:

Explanation:

Explanation:
A # Power supply modules
B # Fan tray assembly
C # Line card slots 1 and 2
D # Supervisor modules
E # Line card slots 5, 6, and 7
The power supply units (A) are at the top, the fan tray (B) is a vertical module on the left, line cards (C and E) span multiple slots horizontally, and supervisor modules (D) are typically placed centrally for control functions.
In theFLDTEC courseunderCisco Modular Hardware Overview, the Cisco Catalyst 9400 series is broken down into clearly defined FRU zones:
* Power Supply Modules (A):Located at thetop of the chassis, these provide redundant, hot-swappable power to the switch.
* Fan Tray Assembly (B):Mounted vertically on the left, this ensures proper cooling and airflow throughout the chassis.
* Line Card Slots 1 and 2 (C):Located in the upper section for network expansion.
* Supervisor Modules (D):Positioned centrally, they handle control plane operations, management, and switching logic.
* Line Card Slots 5, 6, and 7 (E):Lower slots for high-density port expansion.
Correct FRU identification ensures successful maintenance, upgrades, and hardware replacement during field operations.

NEW QUESTION # 46
.....

At the moment you come into contact with our 800-150 learning guide you can enjoy our excellent service. You can ask our staff about what you want to know. After full understanding, you can choose to buy our 800-150 exam questions. If you use the 800-150 study materials, you have problems that you cannot solve. Just contact with us via email or online, we will deal with you right away. And we offer 24/7 online service. So if you have any problem, you can always contact with us no matter any time it is.
