Brain Dump JN0-481 Free & JN0-481 Valid Exam Testking

JN0-481 exam certification is very useful in your daily work in IT industry. When you decide to attend the JN0-481 exam test, it is not an easy thing at begin. First, you should have a detail study plan and have a basic knowledge of the JN0-481 actual test. Here, Juniper JN0-481 test pdf dumps are recommended to you for preparation. JN0-481 Pdf Torrent will tell you the basic question types in the actual test and give the explanations where is available. With the help of the JN0-481 vce dumps, you will be confident to attend the JN0-481 actual test and get your certification with ease.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q77-Q82):

NEW QUESTION # 77

Which of the following two statements are correct?

- A. VXLAN is a Layer 2 encapsulation protocol
- B. VXLAN is a Layer 3 encapsulation protocol
- C. VXLAN encapsulation discards VNIs
- D. VXLAN encapsulation discards VLAN IDs

Answer: A,D

NEW QUESTION # 78

In Juniper Apstra, which statement is correct?

- A. VMware anomaly detection requires a VMware hypervisor with exports enabled.
- B. VMware anomaly detection requires a vCenter server configured under External Systems
- C. VMware anomaly detection is on by default.
- D. VMware anomaly detection requires an Apstra server running on VMware.

Answer: B

Explanation:

VMware anomaly detection is a feature of Apstra that provides visibility and validation of the virtual network settings and the physical network settings in a VMware vSphere environment. To enable this feature, Apstra requires a connection to a vCenter server that manages the ESX/ESXi hosts and the VMs connected to the Apstra-managed leaf switches. The vCenter server must be configured under External Systems in the Apstra web interface, and the vCenter integration must be staged and committed in the blueprint. This allows Apstra to collect information about VMs, ESX/ESXi hosts, port groups, and VDS, and to flag any inconsistencies or mismatches that might affect VM connectivity.

NEW QUESTION # 79

How does Apstra use Fabric Device Management to ensure consistency across the network?

- A. By assigning different agents to devices based on their location
- B. By randomly assigning system IDs to devices
- C. By adjusting the color-coding of cables in the data center
- D. By enforcing uniform configurations on all network devices

Answer: D

NEW QUESTION # 80

When editing a device configuration to install some manual changes, which procedure should be followed?

- A. Add a persistent change to a device configuration with a configlet.
- B. Delete the device from the Juniper Apstra system, change the configuration, then re-import the device.
- C. Edit the pristine configuration of the device.
- D. Edit the configuration on the device directly by the CLI; the changes will automatically be adjusted in the Juniper Apstra configuration

Answer: A

Explanation:

A configlet is a small piece of configuration that can be applied to a device or a group of devices to make persistent changes that are not overwritten by Apstra. Configlets can be used to install manual changes that are not part of the Apstra rendered configuration, such as custom commands, scripts, or features. Configlets can be created, edited, and deleted from the Apstra GUI or CLI.

NEW QUESTION # 81

In the Apstra design phase, what is the role of DC Reference Design?

- A. It specifies the color scheme for network cables

- Answer: C**
