Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q456-Q461):

NEW QUESTION # 456

What are two ways a network administrator transparently identifies users using Active Directory on the Cisco WSA? (Choose two.)
The eDirectory client must be installed on each client workstation.

- A. Deploy a separate Active Directory agent such as Cisco Context Directory Agent.
- B. Create NTLM or Kerberos authentication realm and enable transparent user identification
- C. Deploy a separate eDirectory server: the client IP address is recorded in this server
- D. Create an LDAP authentication realm and disable transparent user identification.

Answer: A,B

Explanation:

* Transparently identify users with authentication realms - This option is available when one or more authentication realms are configured to support transparent identification using one of the following authentication servers:

* Active Directory - Create an NTLM or Kerberos authentication realm and enable transparent user identification. In addition, you must deploy a separate Active Directory agent such as Cisco's Context Directory Agent. For more information, see Transparent User Identification with Active Directory.

* LDAP - Create an LDAP authentication realm configured as an eDirectory, and enable transparent user identification. For more information, see Transparent User Identification with LDAP.

Details:

https://www.cisco.com/c/en/us/td/docs/security/wsa/wsa11-0/user_guide/b_WSA_UserGuide/b_WSA_UserGuid
