Because our products will help you solve the problem, it will never let you down if you decide to purchase and practice our SCR latest question.

The Global Association of Risk Professionals (GARP) has recently introduced a new certification exam, the Sustainability and Climate Risk (SCR) Certification. SCR exam is designed to help professionals in the financial industry to better understand and manage the risks associated with climate change and sustainability issues. The SCR Certification is a testament to the growing recognition of the importance of sustainability and climate risk in the financial industry.

GARP SCR Exam covers a wide range of topics related to sustainable finance and risk management, including climate change, sustainable investing, ESG integration, green bonds, and sustainable risk assessment. SCR exam is divided into two parts, with the first part focusing on the fundamentals of sustainability and climate risk and the second part covering advanced topics related to sustainable finance and risk management.

## GARP Sustainability and Climate Risk Sample Questions (Q25-Q30):

### NEW QUESTION # 25

A senior portfolio analyst at a global asset management firm performs a portfolio review to identify assets that may be affected by climate risk. Preliminary findings show the firm heavily invests in food and beverage companies with high climate risk exposure due to extreme temperatures and droughts. In a report to senior management, the analyst notes the firm can improve portfolio performance by examining physical risk, as the firm currently focuses primarily on transition risk.

Which approach to examining physical risk at the portfolio level should the analyst recommend?

- A. Best- and worst-in class of an index
- B. "Warming potential" measurement on portfolios
- C. Downscaled global climate modeling
- D. Temperature score methodology

**Answer: A**

#### NEW QUESTION # 26

A West African energy company plans to expand beyond regional operations to markets throughout the continent. Executive leadership determines integrating SDGs into operations can help the company appeal to new consumers and political decision makers. The company CSO develops a strategy to promote the SDGs to external stakeholders.

What should the strategy include?

- A. Calculation of the economic benefits of an SDG before applying a strategy.
- B. Prioritization of SDGs that incorporate nature-based solutions.
- C. Quantification of each SDG target to measure progress.
- D. Disclosure of the SDG alignment to investors to allow comparability among peers.

**Answer: C**

#### NEW QUESTION # 27

Organizers of an upcoming UN Climate Change Conference prepare a document highlighting successes and failures of climate accords over the last 20 years.

The document lists what success from the 2009 Copenhagen Accord?

- A. Acceptance of a quantitative long-term global warming limit
- B. Establishment of a uniform emissions reduction target baseline
- C. Unconditional emissions reduction targets by Annex II parties
- D. Binding short-term GHG emissions reduction commitments

**Answer: A**

#### NEW QUESTION # 28

The sustainability team at a global airline company enhances long-term operational efficiency and resilience.

The team reviews potential strategies using scenario analysis to assess climate transition risks and optimize logistics. How can the airline company use scenario analysis to assess transition risk?

- A. Integrate detailed data on regional hazards, exposure, and vulnerability.
- B. Apply a shadow carbon tax in cost assessment models.
- C. Incorporate physical risk impacts from extreme weather events into operational models.
- D. Use historic weather data to improve route resilience.

**Answer: B**

#### NEW QUESTION # 29

A sustainability analyst at a global energy company assesses trends in the electric power sector for the next 10 years. To inform strategy, the analyst focuses on the interaction among climate risks, advancements in renewable energy, and stranded asset risk for fossil fuels.

According to the analyst, what trend will likely emerge during the next decade?

- A. Power plants that replace natural gas with coal will reduce transition risks in the event of rising carbon prices.
- B. The global levelized cost of energy for renewables increases to compete with fossil fuel energy generation.
- C. Solar and wind newbuilds require stronger subsidies to be competitive in most parts of the world.
- D. The transportation sector faces technology risk if the trajectory of the learning curve for battery storage remains the same.
