Just download the UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) PDF dumps file and start the UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) exam questions preparation right now. Whereas the other two UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) practice test software is concerned, both are the mock UiPath UiPath-ADAv1 Exam Dumps and help you to provide the real-time UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) exam environment for preparation.

UiPath Automation Developer Associate v1 Exam Sample Questions (Q207-Q212):

NEW QUESTION # 207

Where in the REFramework template project is the "SetTransactionStatus.xaml" invoked?

- A. In the Finally section of the Try Catch activity in the Process Transaction state.
- B. In the Try section of the Try Catch activity in the End Process state.
- C. In the Try and Catches sections of the Try Catch activity in the Process Transaction state.
- D. In the Catches section of the Try Catch activity in the Process Transaction state.

Answer: A

Explanation:

Explanation

The SetTransactionStatus.xaml file is invoked in the Finally section of the Try Catch activity in the Process Transaction state of the REFramework template project. This file is responsible for setting the status of the current transaction item based on the outcome of the process. It also closes all applications that are used by the process and logs relevant information. (UiPath Studio - REFramework - UiPath Academy) References:

NEW QUESTION # 208

A developer loaded an existing workflow that uses UI Automation in Google Chrome. The Google Chrome extension has not been installed on the developer's machine How should the developer load the Google Chrome extension from UiPath Studio?

Instructions: Drag the Description found on the left and drop on the correct Step found on the right.

Answer:

Explanation:

Explanation:

The developer can load the Google Chrome extension from UiPath Studio by following these steps:

* Step 1 = Navigate to Home in UiPath Studio. This is the section where you can create, open, or manage your projects.

* Step 2 = Click Tools to see UiPath Extensions. This is the section where you can install or update various extensions for different applications or browsers.

* Step 3 = Select Chrome and then click Install. This will launch the Chrome browser and redirect you to the Chrome Web Store page for the UiPath extension.

* Step 4 = Click Enable extension in the Google Chrome confirmation pop-up. This will add the UiPath extension to your browser and allow you to use UI automation activities in Chrome.

NEW QUESTION # 209

When a developer runs a process using the REFramework, with the process utilizing Orchestrator queues and a queue already created with the Name provided and the Auto Retry function disabled, which states will be executed without errors?

- A. Initialization -> Get Transaction Data -> End Process
- **B. Initialization -> Get Transaction Data -> Process Transaction -> End Process**
- C. Initialization -> End Process
- D. Initialization -> Process Transaction -> End Process

Answer: B

Explanation:

Explanation

The REFramework is a template that provides a structured and consistent way to develop automation processes using state machines. The REFramework has four main states: Initialization, Get Transaction Data, Process Transaction, and End Process. Each state performs a specific function and transitions to another state based on the outcome. When a developer runs a process using the REFramework, with the process utilizing Orchestrator queues and a queue already created with the Name provided and the Auto Retry function disabled, the following states will be executed without errors:

Initialization: This state is used to initialize the application, read the configuration data, and log in to Orchestrator. If the initialization is successful, the state transitions to Get Transaction Data; otherwise, it transitions to End Process. (UiPath ReFramework documentation1) Get Transaction Data: This state is used to retrieve a transaction item from the Orchestrator queue and assign it to a variable. If there is a transaction item available, the state transitions to Process Transaction; otherwise, it transitions to End Process. (UiPath ReFramework documentation1) Process Transaction: This state is used to execute the business logic for the current transaction item and handle any exceptions that may occur. If the transaction is successful, the state updates the status of the transaction item to Successful and transitions to Get Transaction Data; if the transaction fails due to a business exception, the state updates the status of the transaction item to Failed and transitions to Get Transaction Data; if the transaction fails due to a system exception, the state updates the status of the transaction item to Failed and retries the transaction based on the MaxRetryNumber parameter from the Config file. If the retry limit is reached, the state transitions to End Process; otherwise, it transitions to Get Transaction Data. (UiPath ReFramework documentation1) End Process: This state is used to close all applications, log out of Orchestrator, and terminate the process. This state does not have any transition. (UiPath ReFramework documentation1)

NEW QUESTION # 210

What is a valid way to install a custom activity package in UiPath Studio?

- A. Go to Package Manager, click on "All Packages," search for the package, and click "Install".
- B. Double-click on the activity in the "Activities" panel of UiPath Studio.
- C. Download the package from an external source and drag it into UiPath Studio.
- D. Search for the package in the UiPath Marketplace and then manually install it.

Answer: A

Explanation:

A valid way to install a custom activity package in UiPath Studio is to go to the Package Manager, click on "All Packages," search for the package you want to install, and click "Install". This allows you to add custom activities to your project from the managed packages available.

NEW QUESTION # 211

A developer needs to create an array of folder names from the String variable. FilePath = "C:\Users\UiPathRobot\Documents\Technologies". Based on best practice, which method will return an array of only the folder names?

- A. `Split(FilePath, "\", StringSplitOptions.RemoveEmptyEntries)`
- B. `SplitV, FilePath, StringSplitOptions.RemoveEmptyEntries)`
- C. `SplitV, FilePath)`
- D. `Split(FilePath/V)`

Answer: A

Explanation:

To create an array of folder names from the String variable FilePath, the method that will return an array of only the folder names is: `Split(FilePath, "\", StringSplitOptions.RemoveEmptyEntries)`

This method uses the String.Split method, which returns an array of strings that are separated by a specified delimiter. The delimiter in this case is the backslash character ("\") which is used to separate the folder names in the file path. The StringSplitOptions.RemoveEmptyEntries option is used to remove any empty entries from the resulting array, such as the one before the first backslash or after the last backslash. For example, if the FilePath variable has the value:

FilePath = "C:\Users\UiPathRobot\Documents\Technologies"

Then the method `Split(FilePath, "\", StringSplitOptions.RemoveEmptyEntries)` will return an array of four strings:

`{"C", "Users", "UiPathRobot", "Documents", "Technologies"}`

These are the folder names in the file path, without any empty entries.

References: String.Split Method from UiPath documentation.

NEW QUESTION # 212

.....

TestPassKing is one of the leading platforms that has been helping UiPath Exam Questions candidates for many years. Over this long time, period the UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) exam dumps helped countless UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) exam questions candidates and they easily cracked their dream UiPath UiPath-ADAv1 Certification Exam. You can also trust UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) exam dumps and start UiPath Automation Developer Associate v1 Exam (UiPath-ADAv1) exam preparation today.
