Topic 10	<ul style="list-style-type: none"> Transport modes: This section aims to analyze different methods to collect and read data from the production environment.
Topic 11	<ul style="list-style-type: none"> Verifying recoverability: This section of the exam covers the creation of automated tests to ensure recoverability from backups and replicas.

Veeam Certified Engineer v12 Sample Questions (Q151-Q156):

NEW QUESTION # 151

Veeam is being used to back up a Microsoft SQL VM with transaction logs being backed up every 30 minutes to a repository that is local to the Veeam Backup and Replication server. Business requirements dictate that the database backup and all logs also be stored on a secondary, standalone repository in the DR datacenter.

What should the Veeam engineer configure to meet the requirements?

- A. SOBR with Copy mode enabled
- B. Backup Copy Job in Periodic Copy mode
- **C. Backup Copy Job using the SQL Transaction Log Job as the source**
- D. Backup Copy Job in Immediate mode

Answer: C

Explanation:

In Veeam Backup & Replication, to meet the business requirements of having both the database backup and transaction logs stored at a secondary location, a Backup Copy Job can be configured. The Backup Copy Job can be set to include both the VM backup and the transaction logs, ensuring that the database's recovery points are consistent and available at the DR site. The transaction logs backup every 30 minutes can be specified as the source for the Backup Copy Job, ensuring that the transaction log backups are also copied to the secondary repository.

NEW QUESTION # 152

What is necessary prior to configuring replica mapping?

- A. A Veeam backup in the production site
- B. A Veeam replica in the production site
- C. A Veeam backup in the disaster recovery site
- **D. A Veeam replica in the disaster recovery site**

Answer: D

Explanation:

NEW QUESTION # 153

Veeam ONE _____ can detect when a potential ransomware attack is happening and be configured to take mitigating actions.

- A. Data Protection View
- **B. Alarm Management**
- C. Reporting
- D. Alert Management

Answer: B

Explanation:

Explanation

Veeam ONE can help notify you of suspicious activity in your datacenter through the Possible Ransomware Activity alarm. This alarm can be configured to take mitigating actions such as sending an email notification, running a script or creating a support case.

NEW QUESTION # 154

A backup job is configured as follows.

Mode	Forward incremental with weekly synthetic full
Start time	Every day at 20:00
Active full	Sunday
Restore points to keep	14 restore points
Time to finish job	1 hour
Job created	Friday, 13:00

How many full and incremental restore points will be in a repository on day 16 at 23:00?

- **A. 2 full and 12 incremental**
- B. 3 full and 15 incremental
- C. 1 full and 13 incremental
- D. 3 full and 14 incremental

Answer: A

NEW QUESTION # 155

A Veeam administrator has been tasked to create a backup that will automatically make a copy of data on a different media type, while also being off site, without creating additional backup or backup copy jobs. The administrator has determined that a Scale-out Backup Repository can be used as part of the solution. How can this be accomplished?

- **A. Add a capacity tier to the Scale-out Backup Repository and enable the "Copy" option.**
- B. Add an archive tier to the Scale-out Backup Repository and enable the "Copy" option.
- C. Add an archive tier to the Scale-out Backup Repository and enable "GFS Tiering".
- D. Add a capacity tier to the Scale-out Backup Repository and enable the "Move" option.

Answer: A

By adding a capacity tier to the Scale-out Backup Repository and enabling the "Copy" option, the administrator can create a backup that automatically copies data to a different media type (object storage) and also ensures that the data is offsite. This is accomplished without creating additional backup or backup copy jobs. The "Copy" option allows for immediate copying of backups to the capacity tier, meeting the criteria specified.
