Pass NCP-US-6.5 Exam with Pass-Sure Review NCP-US-6.5 Guide by TestPDF

BONUS!!! Download part of TestPDF NCP-US-6.5 dumps for free: https://drive.google.com/open?id=10B7XwnJj9NBCsAUMRiZmj3HbX02tQ882

TestPDF NCP-US-6.5 valid exam dumps will help you pass the actaul test at first time, and you do not try again and again. Try the Nutanix NCP-US-6.5 free demo and assess the validity of our NCP-US-6.5 practice torrent. You will enjoy one year free update after purchase of Nutanix study dumps. The comprehensive contents of NCP-US-6.5 Pdf Dumps will clear your confusion and ensure a high pass score in the real test.

Nutanix NCP-US-6.5 Exam Syllabus Topics:

Topic	Details
Topic 1	• Configure Nutanix Files with advanced features • Determine the appropriate method to ensure data availability • recoverability

Topic 2	• Deploy and Upgrade Nutanix Unified Storage • Perform upgrades • maintenance for Files • Objects implementations
Topic 3	• Troubleshoot issues related to Nutanix Objects • Troubleshoot issues related to Nutanix Volumes
Topic 4	• Configure and Utilize Nutanix Unified Storage • Identify the steps to deploy Nutanix Objects
Topic 5	• Identify the steps to deploy Nutanix Files • Given a scenario, determine product and sizing parameters
Topic 6	• Configure Nutanix Objects • Describe how to monitor performance and usage
Topic 7	• Analyze and Monitor Nutanix Unified Storage • Describe the use of Data Lens for data security
Topic 8	• Troubleshoot issues related to Nutanix Files • Explain Data Management processes for Files and Objects

Quiz Accurate Nutanix - NCP-US-6.5 - Review Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Guide

So many candidates have encountered difficulties in preparing to pass the NCP-US-6.5 exam. But our study materials will help candidates to pass the exam easily. Our NCP-US-6.5 guide questions can provide statistics report function to help the learners to find weak links and deal with them. The NCP-US-6.5 Test Torrent boost the function of timing and simulating the exam. They set the timer to simulate the exam and help the learners adjust the speed and keep alert.

Nutanix Certified Professional - Unified Storage (NCP-US) v6.5 Sample Questions (Q30-Q35):

NEW QUESTION # 30
Which scenario is causing the alert and need to be addressed to allow the entities to be protected?

- A. One or more VMs or Volume Groups belonging to the Consistency Group contains state metadata
- B. One or more VMs or Volume Groups belonging to the Consistency Group is part of multiple Recovery Plans configured with a Witness.
- C. One or more VMs or Volume Groups belonging to the Consistency Group may have been deleted
- D. The logical timestamp for one or more of the Volume Groups is not consistent between clusters

Answer: C

Explanation:
The scenario that is causing the alert and needs to be addressed to allow the entities to be protected is that one or more VMs or Volume Groups belonging to the Consistency Group may have been deleted. A Consistency Group is a logical grouping of VMs or Volume Groups that are protected together by a Protection Policy. A Protection Policy is a set of rules that defines how often snapshots are taken, how long they are retained, and where they are replicated for disaster recovery purposes. If one or more VMs or Volume Groups belonging to the Consistency Group are deleted, the Protection Policy will fail to protect them and generate an alert with the code AI303551 - VolumeGroupProtectionFailed. NEW QUESTION # 31
What is the network requirement for a File Analytics deployment?

- A. Must use the Client-side network
- B. Must use the CVM not work
- C. Must use the Backplane network
- D. Must use the Storage-side network

Answer: A

Explanation:
Nutanix File Analytics is a feature that provides insights into the usage and activity of file data stored on Nutanix Files. File Analytics consists of a File Analytics VM (FAVM) that runs on a Nutanix cluster and communicates with the File Server VMs (FSVMs) that host the file shares. The FAVM collects metadata and statistics from the FSVMs and displays them in a graphical user interface (GUI). The FAVM must be deployed on the same network as the FSVMs, which is the Client-side network. This network is used for communication between File Analytics and FSVMs, as well as for accessing the File Analytics UI from a web browser. The Client-side network must have DHCP enabled and must be routable from the external hosts that access the file shares and File Analytics UI. NEW QUESTION # 32
Question: Deploying Files instances requires which two minimum resources? (Choose two.) Options:

- A. 8 vCPUs per host
- B. 8 GiB of memory per host
- C. 4 vCPUs per host
- D. 12 GiB of memory per host

Answer: C,D

Explanation:
Nutanix Files instances are deployed using File Server Virtual Machines (FSVMs) that run on the Nutanix cluster's hypervisor (AHV, ESXi, or Hyper-V). The minimum resource requirements for deploying FSVMs are specified in the Nutanix Files documentation to ensure proper performance. These requirements are typically defined per FSVM, not per host, as FSVMs are virtual machines distributed across the cluster's hosts.
According to the official Nutanix documentation:
* vCPUs: Each FSVM requires a minimum of 4 vCPUs to operate effectively.
* Memory: Each FSVM requires a minimum of 12 GiB of memory (RAM).
The question asks for the "minimum resources" required for deploying Files instances, and the options are framed as "per host."
However, in the context of Nutanix Files, resource requirements are specified per FSVM, as FSVMs are the entities consuming these resources. The options likely reflect a misunderstanding in the original question phrasing, but based on the standard Nutanix Files deployment requirements:
* 4 vCPUs per FSVM (option D) is correct, as this is the minimum vCPU requirement.
* 12 GiB of memory per FSVM (option C) is correct, as this is the minimum memory requirement.
Options A (8 vCPUs per host) and B (8 GiB of memory per host) do not align with the documented minimum requirements for FSVMs:
* 8 vCPUs is higher than the minimum requirement of 4 vCPUs per FSVM.
* 8 GiB of memory is lower than the minimum requirement of 12 GiB per FSVM.
Exact Extract from Nutanix Documentation:
"For a Nutanix Files deployment, each File Server Virtual Machine (FSVM) requires the following minimum resources:
* 4 vCPUs
* 12 GiB of RAMThese resources ensure that the FSVM can handle file service operations efficiently."- Nutanix Files Deployment Guide, Version 4.0, Section: "System Requirements for Nutanix Files"
:
Nutanix Files Deployment Guide, Version 4.0, Section: "System Requirements for Nutanix Files" (Nutanix Portal).

NEW QUESTION # 33
An administrator has received an alert AI303551 - VolumeGroupProtectionFailed details of alerts as follows:
Which error logs should the administrator be reviewing to determine why the relative service is down:

- A. solver.log
- B. arithmos.ERROR

Answer: B

Explanation:
The error log that the administrator should review to determine why the relative service is down is arithmos.ERROR. Arithmos is a service that runs on each CVM and provides volume group protection functionality for Volumes. Volume group protection is a feature that allows administrators to create protection policies for volume groups, which define how often snapshots are taken, how long they are retained, and where they are replicated. If arithmos.ERROR log shows any errors or exceptions related to volume group protection, it can indicate that the relative service is down or not functioning properly. NEW QUESTION # 34
What tool can be used to report on a specific user's activity within a Files environment?

- A. Prism Central Activity menu
- B. Files Console Usage
- C. Prism Element Alerts menu
- D. Data Lens Audit Trails

Answer: D

Explanation:
The tool that can be used to report on a specific user's activity within a Files environment is Data Lens Audit Trails. Data Lens Audit Trails is a feature that provides detailed logs of all file operations performed by users on Files shares and exports, such as create, read, write, delete, rename, move, copy, etc. Data Lens Audit Trails can help administrators track and audit user actions and identify any unauthorized or malicious activities. The administrator can use Data Lens Audit Trails to filter and search for a specific user's activity based on various criteria, such as file name, file type, file size, file path, file share, file server, operation type, operation time, operation status, and so on.
