QSA_New_V4試験関連赤本 & QSA_New_V4資格難易度

最近、PCI SSC QSA_New_V4試験に合格するのは重要な課題になっています。同時に、QSA_New_V4資格認証を受け入れるのは傾向になります。QSA_New_V4試験に参加したい、我々CertJukenのQSA_New_V4練習問題を参考しましょう。弊社は1年間の無料更新サービスを提供いたします。あなたがご使用になっているとき、何か質問がありましたらご遠慮なく弊社とご連絡ください。

PCI SSC Qualified Security Assessor V4 Exam 認定 QSA_New_V4 試験問題 (Q65-Q70):

質問 # 65

An entity wants to know if the Software Security Framework can be leveraged during their assessment. Which of the following software types would this apply to?

- A. Any payment software In the CDE.
- B. Validated Payment Applications that are listed by PCI SSC and have undergone a PA-DSS assessment.
- C. Only software which runs on PCI PTS devices.
- **D. Software developed by the entity in accordance with the Secure SLC Standard.**

正解: D

解説:

Software Security Framework Overview

* PCI SSC's Software Security Framework (SSF) encompasses Secure Software Standard and Secure Software Lifecycle (Secure SLC) Standard.

* Software developed under the Secure SLC Standard adheres to security-by-design principles and can leverage the SSF during PCI DSS assessments.

Applicability

* The framework is primarily for software developed by entities or third parties adhering to PCI SSC standards.

* It does not apply to legacy payment software listed under PA-DSS unless migrated to SSF.

Incorrect Options

* Option A: Not all payment software qualifies; it must align with SSF requirements.

* Option B: PCI PTS devices are subject to different security requirements.

* Option C: PA-DSS-listed software does not automatically meet SSF standards without reassessment.

質問 # 66

According to the glossary, "bespoke and custom software" describes which type of software?

- A. Any software developed by a third party.
- B. Virtual payment terminals.
- **C. Software developed by an entity for the entity's own use.**
- D. Any software developed by a third party that can be customized by an entity.

正解: C

解説:

As per the PCI DSS Glossary, "bespoke and custom software" is defined as software that is developed specifically for, and often by, the entity using it. This includes internally developed applications and externally developed applications created specifically for the entity.

* Option A: Incorrect. Not all third-party software is custom - much is commercial off-the-shelf (COTS).

* Option B: Incorrect. Customisability does not equal bespoke development.

* Option C: Correct. Bespoke software is tailored by or for the entity's specific needs.

* Option D: Incorrect. Virtual terminals are payment interfaces, not types of software.

質問 # 67

Which of the following describes "stateful responses" to communication initiated by a trusted network?

- A. Logs of user activity on the firewall are correlated to identify and respond to suspicious behavior.
- B. Administrative access to respond to requests to change the firewall is limited to one individual at a time.
- **C. Active network connections are tracked so that invalid "response" traffic can be identified.**
- D. A current baseline of application configurations is maintained and any misconfiguration is responded to promptly.

正解: C

解説:

Stateful inspection (or stateful packet filtering) tracks the state of active connections and determines which packets are part of a valid session. Requirement 1.4.2 references the use of network security controls (NSCs) with stateful filtering capability to allow legitimate traffic only in response to trusted requests.

* Option A: Incorrect. Firewall admin procedures are not what "stateful" refers to.

* Option B: Correct. "Stateful responses" mean tracking existing connections to block unauthorised or spoofed responses.

* Option C: Incorrect. That describes configuration management, not stateful filtering.

* Option D: Incorrect. Logging is important but not part of stateful inspection.

質問 # 68

A "Partial Assessment" is a new assessment result. What is a "Partial Assessment"?

- A. An assessment with at least one requirement marked as "Not Tested".
- B. A ROC that has been completed after using an SAQ to determine which requirements should be tested, as per FAQ 1331.
- C. A term used by payment brands and acquirers to describe entities that have multiple payment channels, with each channel having its own assessment.
- D. An interim result before the final ROC has been completed.

正解: A

解説:

According to Section 12.2.3.3 of PCI DSS v4.0.1, a Partial Assessment is defined as a result where at least one PCI DSS requirement is marked as "Not Tested." This is typically seen during gap assessments or pre-validation efforts, not official compliance validation.

* Option A#Incorrect. SAQs are self-assessments; Partial Assessment is a different concept.

* Option B#Incorrect. Interim drafts are not labeled as "Partial".

* Option C#Incorrect. That is a misinterpretation of segmentation by payment channel.

* Option D#Correct. "Not Tested" = Partial Assessment.

質問 # 69

Which of the following is a requirement for multi-tenant service providers?

- A. Provide customers with a shared user ID for access to critical system binaries.
- B. Ensure that a customer's log files are available to all hosted entities.
- C. Provide customers with access to the hosting provider's system configuration files.
- D. Ensure that customers cannot access another entity's cardholder data environment.

正解: D

解説:

For multi-tenant service providers, isolation and segmentation are critical. As per Requirement 12.10.3, each customer's environment must be segregated and protected such that no tenant can access another's data or systems.

* Option A#Correct. This is the foundational control - isolation of customer environments.

* Option B#Incorrect. Exposing system config files is a security risk.

* Option C#Incorrect. Shared user IDs are explicitly prohibited by Requirement 8.2.1.

* Option D#Incorrect. Customers should only access their own logs.
