NEW QUESTION 27

A company has an application that logs all information to Amazon S3. Whenever there is a new log file, an AWS Lambda function is invoked to process the log files. The code works, gathering all of the necessary information. However, when checking the Lambda function logs, duplicate entries with the same request ID are found.

What is causing the duplicate entries?

- A. The Lambda function failed, and the Lambda service retired the invocation with a delay.
- B. The S3 bucket name was specified incorrectly.
- C. There was an S3 outage, which caused duplicate entries of the same log file.
- D. The application stopped intermittently and then resumed.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q166-Q171):

NEW QUESTION # 166

A company is migrating a single-server, on-premises web application to AWS. The company intends to use multiple servers behind an Elastic Load Balancer (ELB) to balance the load, and will also store session data in memory on the web server. The company does not want to lose that session data if a server fails or goes offline, and it wants to minimize user's downtime.

Where should the company move session data to MOST effectively reduce downtime and make users' session data more fault tolerant?

- A. An Amazon ElastiCache for Redis cluster
- B. An Amazon EC2 instance dedicated to session data
- C. The web server's primary disk
- D. A second Amazon EBS volume

Answer: A

NEW QUESTION # 167

A developer at a company writes an AWS CloudFormation template. The template refers to subnets that were created by a separate AWS CloudFormation template that the company's network team wrote. When the developer attempts to launch the stack for the first time, the launch fails. Which template coding mistakes could have caused this failure? (Select TWO.)

- A. The network team's template does not export the subnets in the Outputs section
- B. The Mappings section of the developer's template does not refer to the subnets.
- C. The developer's template does not use the Ref intrinsic function to refer to the subnets
- D. The developer's template does not use the ImportValue intrinsic function to refer to the subnets
- E. The network team's template does not export the subnets in the Mappings section

Answer: A,D

NEW QUESTION # 168

A developer is writing an AWS Lambda function. The developer wants to log key events that occur during the Lambda function and include a unique identifier to associate the events with a specific function invocation. Which of the following will help the developer accomplish this objective?

- A. Obtain the request identifier from the Lambda context object. Architect the application to write logs to a file.
- B. Obtain the request identifier from the Lambda context object. Architect the application to write logs to the console.
- C. Obtain the request identifier from the Lambda event object. Architect the application to write logs to the console.
- D. Obtain the request identifier from the Lambda event object. Architect the application to write logs to a file.

Answer: B

NEW QUESTION # 169

A database specialist is building a system that uses a static vendor dataset of postal codes and related territory information that is less than 1 GB in size. The dataset is loaded into the application's cache at start up. The company needs to store this data in a way that provides the lowest cost with a low application startup time.

Which approach will meet these requirements?

- A. Use an Amazon RDS DB instance. Shut down the instance once the data has been read.
- B. Use Amazon S3 and load the data from flat files.
- C. Use Amazon Aurora Serverless. Allow the service to spin resources up and down, as needed.
- D. Use Amazon DynamoDB in on-demand capacity mode.

Answer: A

NEW QUESTION # 170

A large company is using an Amazon RDS for Oracle Multi-AZ DB instance with a Java application. As a part of its disaster recovery annual testing, the company would like to simulate an Availability Zone failure and record how the application reacts during the DB instance failover activity. The company does not want to make any code changes for this activity. What should the company do to achieve this in the shortest amount of time?

- A. Use a blue-green deployment with a complete application-level failover test
- B. Use the RDS console to reboot the DB instance by choosing the option to reboot with failover
- **C. Use RDS fault injection queries to simulate the primary node failure**
- D. Add a rule to the NACL to deny all traffic on the subnets associated with a single Availability Zone

Answer: C
