Pass Guaranteed Quiz 2026 Newest BCS TM3: Practice ISTQB Certified Tester Advanced Level - Test Management v3.0 Test Online

As you know that a lot of our new customers will doubt about our website or our TM3 exam questions though we have engaged in this career for over ten years. So the trust and praise of the customers is what we most want. We will accompany you throughout the review process from the moment you buy TM3 Real Exam. We will provide you with 24 hours of free online services to let you know that our TM3 study materials are your best tool to pass the exam.

BCS ISTQB Certified Tester Advanced Level - Test Management v3.0 Sample Questions (Q46-Q51):

NEW QUESTION # 46
During which test planning task are the test design techniques to be applied during the project, identified and selected?

- **A. Define test approach, and estimate and allocate resources**
- B. Identify risk treatment approaches

- C. Understand the context and organise test planning
- D. Establish test plan

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:
In theTest Planningactivities of the CTAL-TM v3.0 syllabus (Chapter 3), the selection oftest design techniquesis part of defining thetest approach. The syllabus describes that when thetest manager defines the test approach, they determinehowtesting will be performed, including thetest design techniquesto be used, and align resources and estimates accordingly.
The earlier tasks in planning set the stage (understanding context and organization) and address risk treatment choices, while theestablish test plantask documents and baselines the already chosen approach and decisions.
Why the other options are incorrect:
A). Understand the context and organise test planning- This task focuses on analyzing the test context, stakeholders, constraints, and organizational aspects to prepare for planning; it does not yet select specifictest design techniques.
B). Identify risk treatment approaches- This task deals with how risks will be addressed (e.g., through mitigation, contingency, or targeted testing focus); it informs priorities but does not itself selecttest design techniques.
D). Establish test plan- This task records and baselines the plan (including approach and techniques already chosen). The selection of techniques has already occurred when defining the approach.
References (ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus):
Chapter 3:Test Planning, Monitoring, and Control- subsection describingtest planning tasksand the activity todefine the test approach(which includes selectingtest design techniques), followed by estimation/resource allocation and subsequent establishment of thetest plan.

NEW QUESTION # 47
Factors that are important to take into account when performing test estimation include:
i. The quality of the test basis
ii. The availability of test automation
iii. The amount of rework required
iv. The distribution of testing across several locations
The various factors can be grouped by characteristic. Examples of characteristics include:

- A. Development processWhich factor is related to which characteristic?
- B. A = iv, B = iii, C = ii, D = i
- C. A = iv, B = iii, C = i, D = ii
- D. A = i, B = ii, C = iii, D = iv
- E. Product
- F. A = ii, B = iii, C = iv, D = i
- G. Test results
- H. Test context

Answer: G

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:
Product characteristic # quality of the test basis (C = i):The syllabus lists the quality and stability of the requirements/specifications (test basis) as a product-related estimation driver.
Test results characteristic # amount of rework (B = iii):Expected rework/defect-fix cycles and their impact on retesting and confirmation testing are identified through past results/defect patterns and directly affect estimates.
Test context characteristic # distribution across locations (A = iv):Organizational and logistical context (multiple sites, time zones, communication overhead) influences test effort.
Development process characteristic # availability of test automation (D = ii):Process/tooling capability (e.g., presence of automation frameworks) is treated as a development/process factor affecting test efficiency and thus estimation.The syllabus groups estimation drivers into characteristics such as product, development process, test results/history, and test/organizational context, and recommends mapping specific factors to these groups to structure estimation.

NEW QUESTION # 48

Which of the following activities in the test process is considered to deliver a document which can be used as a major input for test process improvement?

- A. Test Monitoring
- B. Test Execution
- C. Test Planning
- D. Test Completion

Answer: D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:
In the ISTQB CTAL-TM v3.0 syllabus (Chapter:Testing Process, section onTest Completion), the Test Completion activity includes producing thetest summary report, capturinglessons learned, and finalizing
/archiving testware. Thetest summary report and lessons learned are specifically identified as key inputs to test process improvement, enabling organizations to refine their approach, improve efficiency, and address gaps revealed during the test effort. This makesTest Completionthe activity that delivers the document(s) most directly used for ongoingtest process improvement.
(Reference: CTAL-TM v3.0 Syllabus - Chapter "Testing Process", subsection "Test Completion":
responsibilities include creating the test summary report, collecting lessons learned, and providing input to process improvement.)

NEW QUESTION # 49
Which of the following tools help to understand which part of the test object has been exercised by testing?

- A. Code coverage tool
- B. Test execution tool
- C. Requirements management tool
- D. Static analysis tool

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:
UnderTest Tool and Automation, the syllabus explains thatcoverage tools(often calledcode coverage tools) measurewhich parts of the code or structure(e.g., statements, branches, conditions) have beenexecuted by tests. This directly answers the question about "which part of the test object has been exercised." Amanages requirements and traceability, not execution coverage.
Bexecutes tests but typically does not measure structural coverage of the code by itself.
Canalyzes code without executing it; it identifies defects or coding standard violations, not runtime coverage.
Relevant syllabus areas:Test Tool and Automation-Coverage measurement tools(structural coverage for assessing extent of code exercised by testing).

NEW QUESTION # 50
You are a test manager in charge of integration, system, and acceptance testing for a bank. You are working on a project to upgrade an existing ATM to allow customers to obtain cash advances from supported credit cards. The system should allow cash advances from €20 to €500 (both inclusive) for all supported credit cards. The supported credit cards are American Express, VISA, Eurocard, and Mastercard. The system should be easy to use for all users, including new users.
In the master test plan, the following items are listed in the section named "items and/or features to be tested":
I. All supported credit cards
II. Language localisation
III. Valid and invalid advances
IV. Usability
Assume that the project has now been completed, and the ATM system has been in use for just over two months. You are planning a retrospective meeting for the testing work performed.
Which of the following areas is most likely to be considered in this retrospective?

- A. The requirements engineering process
- B. Operational defects occurred during the first two months of production
- C. Comparing actual tests completed versus estimated number of tests

- D. Documenting the final and open defect list

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:
In theTesting Process(Test Completion and improvement), the syllabus directs the test manager to useproduction and operational feedback(includingdefects found in live operation) as key inputs tolessons learnedandtest process improvement. A retrospective held after two months in production wouldspecifically examine operational defect datato evaluate test effectiveness, coverage, and the adequacy of acceptance criteria and non-functional aspects (e.g., usability, localization).
OptionB(final/open defect list) is part oftest completiondeliverables at project close, not the primary new focus of apost-deployment retrospective.
OptionC(requirements engineering process) may be discussed, but themost directly relevant and new evidencefor improvement after release isoperational defects.
OptionD(planned vs. executed tests) is amonitoring/controlactivity during the project; it can inform improvement, butlive defect trendsare the principal post-release focus.Relevant syllabus areas:Testing Process-Test Completion(lessons learned; inputs from production and operations to improve future test planning and approach).

NEW QUESTION # 51

......

No matter when you need help on our TM3 training questions, the after-sale service staffs in our company share a passion for you, an intense focus on teamwork, speed and agility, and a commitment to trust and respect for all individuals. At present, our company is a leading global provider of TM3 Preparation exam in the international market. And as you know, the first-class quality comes with the first-class service. So you will find our TM3 is the best in every detail!
