Fortinet FCP - FortiGate 7.6 Administrator 認定 FCP_FGT_AD-7.6 試験問題 (Q91-Q96):

質問 #91

A network administrator is reviewing firewall policies in both Interface Pair View and By Sequence View.

The policies appear in a different order in each view.

Why is the policy order different in these two views?

- A. By Sequence View groups policies based on rule priority, while Interface Pair View always follows the order of traffic logs.
- B. The firewall dynamically reorders policies in Interface Pair View based on recent traffic patterns, but By Sequence View remains static.
- C. Policies in Interface Pair View are prioritized by security levels, while By Sequence View strictly follows the administrator's manual ordering.
- D. Interface Pair View sorts policies based on matching interfaces, while By Sequence View shows the actual processing order of rules.

正解: D

解説:

Interface Pair View organizes policies grouped by source and destination interfaces, whereas By Sequence View displays policies in the exact order they are processed by the firewall.

A web filter profile configuration and firewall policy configuration are shown.

You are trying to access www.facebook.com, but you are redirected to a FortiGuard web filtering block page.

Based on the exhibits, what is the possible cause of the issue?

- A. The firewall policy inspection mode is incorrect.
- **B. The web rating override configuration is incorrect.**
- C. The web filter profile feature set is configured incorrectly.
- D. For www.facebook.com, the URL filter action is incorrect.

正解: B

質問 #93

What is the primary FortiGate election process when the HA override setting is enabled?

- **A. Connected monitored ports > Priority > HA uptime > FortiGate serial number**
- B. Connected monitored ports > Priority > System uptime > FortiGate serial number
- C. Connected monitored ports > HA uptime > Priority > FortiGate serial number
- D. Connected monitored ports > System uptime > Priority > FortiGate serial number

正解: A

解説:

When HA override is enabled, FortiGate uses the following election order: number of connected monitored ports, then device priority, followed by HA uptime, and finally FortiGate serial number as a tiebreaker.

質問 #94

Refer to the exhibit.

```
HQ-NGFW-1 # diagnose test application ipsmonitor 1
pid = 2044, engine count = 0 (+1)
0 - pid:2074:2074 cfg:1 master:0 run:1
```

As an administrator you have created an IPS profile, but it is not performing as expected. While testing you got the output as shown in the exhibit.

What could be the possible reason of the diagnose output shown in the exhibit?

- A. FortiGate entered into IPS fail open state.
- B. Administrator entered the command diagnose test application ipsmonitor 99.
- C. There is a no firewall policy configured with an IPS security profile.
- D. Administrator entered the command diagnose test application ipsmonitor 5.

正解: C

解説:

The output shows the IPS engine count as 0, indicating no active IPS engines are running. This typically means no firewall policy is referencing the IPS security profile, so the IPS profile is not being applied or triggered.

質問 #95

Refer to the exhibits.

HQ-NGFW-1 HA configuration

```
HQ-NGFW-1 # config system ha
HQ-NGFW-1 (ha) # show
config system ha
    set group-id 5
    set group-name "Training"
    set mode a-p
    set password ENC nmk7zGYiRrux1
    set hbdev "port7" 0
    set session-pickup enable
    set override disable
    set priority 200
    set monitor "port1"
end
```

HQ-NGFW-2 HA configuration

```
HQ-NGFW-2 (ha) # show
config system ha
    set group-id 5
    set group-name "Training"
    set mode a-p
    set password ENC n40G3dmn0K50s
    set hbdev "port7" 0
    set session-pickup enable
    set override disable
    set priority 100
    set monitor "port1"
end
```

An administrator configured both members of an HA cluster at the same time. After one week of monitoring, the administrator wants to verify the HA failover performance.
How can the administrator force a failover?

- A. The administrator must reset the HA uptime on HQ-NGFW-1.
- B. The administrator must increase the HA priority on HQ-NGFW-2.
- C. The administrator must set the monitored port to down on HQ-NGFW-1.
- D. The administrator must set the parameter override to enable on HQ-NGFW-2.

正解: A
