問題 #42

Question:

A customer uses FCIP to connect local and remote FC SANs. The remote SAN is replicated to and used to store daily backup data. Latency over the IP WAN increases to unacceptable levels during peak replication periods. No other data transfer services using the WAN experience the same latency problem.

What is the likely cause of the data replication performance issue?

- A. IP packet segmentation
- B. Ethernet frame segmentation

- C. FCIP gateway FC ports set to TE_Port mode
- D. FCIP gateway FC ports set to EX_Port mode

答案： A

解題說明：

IP packet segmentation can cause replication performance issues over the WAN.

Since FCIP tunnels FC frames over IP networks, if the IP packet size exceeds the MTU, packets are fragmented and reassembled, increasing latency.

* TE_Port mode is used for trunking, not related to packet fragmentation.

* EX_Port mode is used for inter-switch connectivity (FCR).

* Ethernet frame segmentation is not relevant in FCIP tunneling.

問題 #43

Question:

What is the first step in the machine learning process?

- A. Collecting the datasets
- B. Training the model
- C. Selecting the type of learning
- D. Analyzing the data

答案： A

解題說明：

The first step in any ML project is to collect the datasets that will be used to train and validate the model.

This data collection step ensures you have enough representative examples.

After this, data is analyzed, learning type is chosen, and the model is trained.

問題 #44

Question:

A company is implementing a new information security policy. They want to ensure that the policy aligns with its risk appetite, internal policies, and external regulations. Which framework can help the company achieve this goal?

- A. GDPR
- B. ITIL
- C. GRC
- D. COBIT

答案： C

解題說明：

GRC stands for Governance, Risk, and Compliance. It's a comprehensive framework that helps organizations align their IT operations with business objectives, manage risks effectively, and ensure compliance with internal and external regulations.

* GDPR: A specific regulation focusing on data protection and privacy in the EU.

* COBIT: A framework for IT governance and management, but not as comprehensive in risk and compliance aspects.

* ITIL: Focuses on IT service management, not directly on governance or compliance.

問題 #45

Question:

What is a key challenge in managing the variety aspects of Big Data?

- A. Reducing data volume to manageable sizes

- B. Combining data from various sources and formats cost-effectively
- C. Storing transaction-based data over the years
- D. Generating real-time data

答案： B

解題說明：

Big Data's 'variety' refers to the challenge of integrating different data types (structured, semi-structured, unstructured) from various sources.

The key challenge is to combine and manage this data cost-effectively, ensuring analytics systems can process it seamlessly.

* Generating real-time data is about velocity, not variety.

* Storing data over years is about volume.

* Reducing volume is more about data management, not variety.

問題 #46

Question:

A company is concerned about unauthorized access to its sensitive data. They want to implement security measures to ensure that only authorized users can access the data. Which goal of information security are they primarily addressing?

- A. Integrity
- B. Accountability
- C. Confidentiality
- D. Availability

答案： C

解題說明：

Confidentiality ensures that sensitive data is only accessible to authorized users. This is a primary goal of information security, achieved by:

* Access controls (authentication, authorization)

* Encryption to protect data in transit and at rest

* Monitoring and auditing to detect unauthorized access

* Availability: Ensuring data/services are accessible when needed.

* Accountability: Tracking actions of users (audit trails).

* Integrity: Protecting data from unauthorized modification.
