Scenario: The Help Desk team is troubleshooting a printing issue. Users connect to print servers located in two different datacenters. The print servers host identical drivers and queues. Upon investigation, a Citrix Administrator finds that users can only print to one of the print servers successfully.

How can the administrator fix this issue?

- A. Create a Citrix policy that disables direct connections to the print servers.
- B. Create a Citrix policy to auto-create printers.
- C. Install Universal printer drivers to all print servers.
- D. Create a Citrix policy that limits the bandwidth consumption used by printing.

**Answer: A**

Explanation:

Explanation

According to the Citrix Printing Quick Start Guide<sup>1</sup>, Citrix recommends that you disable Direct connections to print servers if your Worker VMs and print servers are not in the same LAN. This is because in this situation the print job sent direct to the print server is not compressed. When the print job is routed via ICA it is compressed. This setting can be configured via Citrix policy under Printing > Client Printers > Direct connections to print servers<sup>2</sup>. Disabling this setting will allow users to print to both print servers via the ICA protocol. The other options are not relevant to the issue or the scenario.
