

# Update ZDTE Exam Practice Questions keeps Latest Information of ZDTE

## ZDTE Questions and Answers| New Update with 100% Correct Answers

Whats a common feature of SD-WAN GRE Tunnels and IPSec Tunnels?

Provide secure communication between different network segments

What are the challenges of extending legacy network and security to the public cloud?

Creating VPCs and VNETs add overhead. Increases attack surface.

What are the use cases for ZT Cloud?

Workload to internet, intracloud, multi-cloud, hybrid?

What is the purpose of a GRE tunnel in the ZTE?

To load balance traffic properly

What two items most accurately describe ZT connectors?

1. Access is granted but never shared at the network layer
2. Independent of anyh network for control or trust

Main advantage of using an SD-WAN vendor to connect of Zscaler over traditional routers?

One-click configuration of the connection.

What prevents unauthorized SD-WAN router connections to the Zscaler service?

The partner key

Which tunnel types does Zscaler support between a router and a Zscaler data center?

In today's society, many enterprises require their employees to have a professional ZDTE certification. It is true that related skills serve as common tools frequently used all over the world, so we can realize that how important an ZDTE certification is, also understand the importance of having a good knowledge of it. The rigorous world force us to develop ourselves, thus we can't let the opportunities slip away. Being more suitable for our customers the ZDTE Torrent question compiled by our company can help you improve your competitiveness in job seeking, and ZDTE exam training can help you update with times simultaneously.

## Zscaler ZDTE Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"><li>• Cyberthreat Protection Services: Covers mechanisms for detecting, preventing, and mitigating cyber threats in real time.</li></ul> |
| Topic 2 | <ul style="list-style-type: none"><li>• Data Protection Services: Explains how sensitive data is secured, monitored, and managed within the platform.</li></ul>            |

|         |  |
|---------|--|
| Topic 3 | <ul style="list-style-type: none"> <li>Platform Services: Details the core platform functionalities that enable security, scalability, and reliability.</li> </ul> |
| Topic 4 | <ul style="list-style-type: none"> <li>Risk Management: Focuses on identifying, assessing, and mitigating risks to users and organizational assets.</li> </ul>     |
| Topic 5 | <ul style="list-style-type: none"> <li>Zscaler Zero Trust Automation: Explains automating security and access policies based on Zero Trust principles.</li> </ul>  |
| Topic 6 | <ul style="list-style-type: none"> <li>Identify Services: Explains how user identities are managed and integrated within Zscaler services.</li> </ul>              |

## Free PDF 2026 Zscaler ZDTE: Pass-Sure Zscaler Digital Transformation Engineer Valid Test Papers

Our ZDTE questions pdf is up to date, and we provide user-friendly ZDTE practice test software for the ZDTE exam. Moreover, we are also providing money back guarantee on all of ZDTE test products. If the ZDTE braindumps products fail to deliver as promised, then you can get your money back. The ZDTE Sample Questions include all the files you need to prepare for the ZDTE exam. With the help of the ZDTE practice exam questions and test software, you will be able to feel the real ZDTE exam scenario, and it will allow you to assess your skills.

### Zscaler Digital Transformation Engineer Sample Questions (Q24-Q29):

#### NEW QUESTION # 24

In an LDAP authentication flow, who requests the user credentials?

- A. Active Directory
- B. SAML Identity Provider
- **C. Zscaler**
- D. NSS Server

**Answer: C**

Explanation:

In a Zscaler LDAP authentication flow, the Zscaler service is the component that actually prompts the user for credentials. The user's browser is redirected to a Zscaler-hosted login page where the username and password are entered. Zscaler then acts as the LDAP client: it takes those credentials and performs an LDAP bind against the organization's directory (for example, Microsoft Active Directory) to verify them.

Active Directory (or another LDAP directory) is therefore the authentication authority, but it does not directly "request" credentials from the user; it simply evaluates the bind request received from Zscaler and returns success or failure. The NSS Server is a Nanolog Streaming Service used for log export, and it is not part of the user authentication path. Similarly, a SAML Identity Provider is used for SAML-based SSO flows, not for direct LDAP authentication.

Because Zscaler owns the login page and collects the credentials before passing them securely to the LDAP directory for validation, the correct answer is that Zscaler is the component that requests the user credentials.

#### NEW QUESTION # 25

Which report provides valuable visibility and insight into end-user activity involving sensitive data on endpoints?

- A. Malware report
- **B. Endpoint DLP report**
- C. Incidents report
- D. Data usage report

**Answer: B**

Explanation:

In Zscaler, the Endpoint DLP report is specifically designed to give security teams visibility into how end users interact with sensitive

data on their endpoints (laptops, desktops, etc.). This report aggregates activity such as copying, saving, printing, uploading, or otherwise handling sensitive content that is detected and classified by Zscaler Endpoint DLP. It focuses on data risk rather than just malware or traffic volumes, so it shows which files, users, and devices are involved in policy matches, along with the context of each event.

Unlike a generic malware or data usage report, the Endpoint DLP report is tightly aligned with DLP policies and data classifications you configure (such as PII, financial data, source code, or custom patterns). This allows you to quickly see which policies are triggering on endpoints, which channels or applications are most frequently involved, and where to fine-tune rules or add additional controls. Because it is endpoint-focused, it covers scenarios even when users are off the corporate network, giving a unified view across inline and endpoint DLP enforcement. For exam purposes, this is why Endpoint DLP report is the correct answer.

#### NEW QUESTION # 26

An organization wants to upload internal PII (personally identifiable information) into the Zscaler cloud for blocking without fear of compromise. Which of the following technologies can be used to help with this?

- A. IDM
- **B. EDM**
- C. Engines
- D. Dictionaries

**Answer: B**

Explanation:

Zscaler's advanced data protection stack includes Exact Data Match (EDM), Indexed Document Match (IDM), dictionaries, and predefined DLP engines. Zscaler describes EDM as a technique that "fingerprints" sensitive values—such as PII from structured data sources (databases or spreadsheets)—so the platform can detect and block exact matches to those values while greatly reducing false positives.

With EDM, an on-premises index tool hashes the sensitive fields (for example, names, IDs, or other PII) and then uploads only these hashes—not the readable PII itself—into the Zscaler cloud. Zscaler documentation emphasizes that only hashed fingerprints are sent, allowing organizations to protect internal data "without having to transfer that data to the cloud" in plain form. This directly addresses the requirement to block exfiltration of internal PII without fear of compromise.

Dictionaries and core DLP engines focus on pattern- or keyword-based detection (such as generic PII patterns) rather than matching exact records from an internal dataset. IDM, on the other hand, fingerprints whole documents or forms (for example, templates or high-value documents) rather than row-level PII records. Therefore, for uploading organization-specific PII in a privacy-preserving, hashed form to enable precise blocking, EDM is the correct technology.

#### NEW QUESTION # 27

Which of the following external IdPs is unsupported by OIDC with Zscaler ZIdentity?

- **A. Microsoft AD FS**
- B. PingOne
- C. OneLogin
- D. Auth0

**Answer: A**

Explanation:

The ZIdentity documentation on external identity providers explains that Zscaler supports various third-party IdPs over SAML and OIDC, and then provides specific configuration guides for each provider. For PingOne, Auth0, and OneLogin, the ZIdentity help explicitly describes configuring each as an OpenID Provider (OP) for ZIdentity, clearly stating that they are used to provide SSO via OpenID Connect (OIDC).

By contrast, the ZIdentity guides for Microsoft AD FS consistently describe configuring AD FS "as the SAML Identity Provider (IdP) for ZIdentity," and the examples focus on SAML assertions, claim rules, and certificate bindings—not OIDC flows. In other words, AD FS is supported in a SAML mode with ZIdentity, but it is not listed among the IdPs configured as OpenID Providers for OIDC-based integrations.

The Digital Transformation Engineer identity modules reinforce this differentiation by mapping external IdPs to either OIDC or SAML in the ZIdentity configuration, and the hands-on labs use Azure/Microsoft Entra ID or PingOne for OIDC examples, while AD FS is shown only in SAML scenarios.

Therefore, among the options listed, Microsoft AD FS is the external IdP that is unsupported by OIDC with Zscaler ZIdentity, making option C the correct answer.

### NEW QUESTION # 28

What are the building blocks of App Protection?

- A. Traffic Inspection, Vulnerability Identification, Action Based on User Behavior
- B. Policies, Controls, Profiles
- C. Controls, Profiles, Policies
- **D. Profiles, Controls, Policies**

**Answer: D**

Explanation:

In Zscaler App Protection, the core design model is built around three fundamental building blocks presented in a specific logical order: Profiles, Controls, and Policies. The Digital Transformation Engineer material explains that App Protection's goal is to apply fine-grained security actions to applications and user sessions based on risk and context.

First, Profiles define who is being governed. They group users or devices that share common characteristics (such as department, location, or risk level). Next, Controls define what actions are allowed, restricted, or inspected. Examples include limiting copy-and-paste, file uploads and downloads, printing, clipboard usage, or enforcing additional inspection for sensitive content and risky behaviors. Finally, Policies define when and where those controls are applied by mapping profiles to specific applications or traffic categories under defined conditions (such as user risk posture, device posture, or access method).

Options A and B contain the same elements but in the wrong conceptual order compared to how App Protection is taught and implemented. Option C describes generic security concepts, not the explicit App Protection building-block terminology. Therefore, the correct sequence and terminology, matching the App Protection framework, is Profiles, Controls, Policies.

### NEW QUESTION # 29

.....

ZDTE exam dumps provided by Real4test are tested through practice, and are the most correct and the newest practical ZDTE test dumps. Our Real4test can provide accurate ZDTE certification training questions based on extensive research and the experience of real world to make you pass ZDTE Certification Exam in a short time. If you purchase our ZDTE exam dumps, we will offer free update service within one year.
