クライアントにSalesforce-MuleSoft-Associate学習準備で一流のサービスを提供します。これには、販売の前後のサービス、24時間のオンラインカスタマーサービスと長距離支援、返金サービス、更新サービスが含まれます。

す。クライアントは、私たちの試してみると、クライアントは、彼らはいつでも私たちの顧客サービスに連絡することができ、販売後の私たちの製品について問題がある場合は、販売前に自由にSalesforce-MuleSoft-Associateガイド素材をダウンロードすることができます。私たちSalesforceは、Salesforce Certified MuleSoft Associateトレーニングクイズについて、クライアントの質問や疑問を返信し、その問題を解決するため、24時間オンライン顧客サービスを提供しています。

Salesforce Certified MuleSoft Associate 認定 Salesforce-MuleSoft-Associate 試験問題 (Q40-Q45):

質問 # 40

Which role is primarily responsible for building API implementations as part of a typical MuleSoft integration project?

- A. Integration Architect
- B. Operations
- C. API Designer
- **D. API Developer**

正解: D

解説:

In a typical MuleSoft integration project, the role of building API implementations is primarily assigned to an API Developer. Here's a detailed explanation:

API Developer:

Responsibilities: Focuses on implementing the technical aspects of APIs, including coding, testing, and deploying API endpoints.

Skills: Requires proficiency in MuleSoft Anypoint Platform, MuleSoft connectors, and API development best practices.

Typical Tasks:

API Implementation: Writing code to implement API logic and data processing.

Integration: Connecting APIs to backend systems, databases, and external services.

Testing: Developing and executing unit and integration tests to ensure API functionality and reliability.

MuleSoft Role Descriptions: API Developer

API Development Lifecycle: Building APIs

質問 # 41

In preparation for a digital transformation initiative an organization is reviewing related IT integration projects that failed for various reasons According to MuleSoft's surveys of global IT leaders, what is a common cause of IT project failure that this organization may likely discover in its assessment?

- A. Reliance on an Integration-Platform-as-a-Service (iPaaS)
- B. Following an Agile delivery methodology
- **C. Lack of alignment around business outcomes**
- D. Spending too much time on enablement

正解: C

解説:

One common cause of IT project failure identified by MuleSoft's surveys of global IT leaders is the lack of alignment around business outcomes. Here's a detailed explanation:

Lack of Alignment:

Definition: This occurs when IT projects are not clearly linked to the organization's strategic goals and business objectives.

Impact: Misalignment can lead to projects that do not deliver the intended business value, resulting in wasted resources and failed initiatives.

Common Causes:

Poor Communication: Lack of effective communication between business stakeholders and IT teams can lead to misunderstandings and misaligned priorities.

Undefined Objectives: Projects without clearly defined business outcomes and success metrics struggle to demonstrate value and justify investments.

Solution:

Business-IT Collaboration: Foster strong collaboration between business and IT to ensure projects are aligned with strategic goals.

Outcome-Focused Planning: Define clear business outcomes and success criteria at the outset of each project.

MuleSoft Surveys: State of IT Digital Transformation

Causes of IT Project Failure: Common Reasons for Project Failure

質問 # 42

Which component of Anypoint Platform belongs to the platform control plane'?

- A. Runtime Fabric
- **B. API Manager**
- C. Runtime Replica
- D. Anypoint Connectors

正解: B

解説:

In Anypoint Platform, the control plane is responsible for managing and controlling the various components and services that make up the platform. API Manager is part of the control plane, providing centralized management of APIs. Here's a detailed explanation:
Control Plane:

Definition: The control plane in Anypoint Platform is responsible for the management, monitoring, and control of APIs, applications, and other platform resources.

Components: Includes tools for API management, analytics, security, and governance.

API Manager:

Purpose: Allows users to manage API policies, monitor API usage, and secure APIs. It provides a centralized interface for managing the entire lifecycle of APIs.

Features:

Policy Enforcement: Apply security policies, rate limiting, and other governance rules.

Analytics and Monitoring: Track API performance, usage statistics, and detect anomalies.

Access Control: Manage user access and permissions for APIs.

MuleSoft Documentation: API Manager

Anypoint Platform Overview: Anypoint Platform

質問 # 43

An integration team follows MuleSoft's recommended approach to full lifecycle API development. Which activity should this team perform during the API implementation phase?

- A. Validate the API specification
- B. Design the API specification
- **C. Use the API specification to build the MuleSoft application**
- D. Use the API specification to monitor the MuleSoft application

正解: C

解説:

MuleSoft recommends a full lifecycle API development approach which includes several phases such as design, implementation, testing, deployment, and management. During the API implementation phase, the primary activity is to use the API specification to build the MuleSoft application. Here's a detailed explanation:

API Design:

Create API Specification: Initially, an API specification is created using RAML or OAS (OpenAPI Specification) to define the API's structure, endpoints, request/response formats, and security requirements.

API Implementation:

Build Mule Application: Using the API specification as a blueprint, the development team implements the MuleSoft application. This involves creating flows, integrating with backend systems, and ensuring the API functions as specified.

APIKit: MuleSoft provides APIKit, a tool that automatically generates Mule flows based on the API specification, speeding up the development process.

Testing: During implementation, unit tests (using MUnit) and integration tests are created to ensure the API behaves as expected.

Validation and Monitoring:

Validate Against Specification: Throughout the implementation phase, the API is continuously validated against the original specification to ensure compliance.

Deployment and Monitoring: Post-implementation, the API is deployed, and tools like Anypoint Monitoring are used to monitor its performance and usage.

MuleSoft Documentation: Full Lifecycle API Management

質問 # 44

A developer is examining the responses from a RESTful web service that is compliant with the Hypertext Transfer Protocol (HTTP/1.1) as defined by the Internet Engineering Task Force (IETF).

In this HTTP/1.1-compliant web service, which class of HTTP response status codes should be specified to indicate when client requests are successfully received, understood and accepted by the web service?

- A. 5xx
- B. 3xx
- C. 4xx
- **D. 2xx**

正解: D

解説:

In HTTP/1.1, response status codes are categorized to indicate the result of a client's request. Here's a detailed explanation of the 2xx class of HTTP response status codes:

2xx Success Codes:

Definition: The 2xx class of status codes indicates that the client's request was successfully received, understood, and accepted by the server.

Common Codes:

200 OK: The request has succeeded.

201 Created: The request has been fulfilled and resulted in a new resource being created.

202 Accepted: The request has been accepted for processing, but the processing is not complete.

204 No Content: The server successfully processed the request, but there is no content to return.

Importance:

Client Acknowledgment: These codes inform the client that their request was processed successfully, enabling appropriate client-side actions.

RESTful Standards: Adhering to these standards ensures consistent and predictable API behavior.

IETF RFC 7231: HTTP/1.1 Semantics and Content

HTTP Status Codes: HTTP Status Code Definitions
