Splunk SPLK-1003 Cert - Valid SPLK-1003 Exam Camp Pdf

Itcertmaster exam study material is essential for candidates who want to appear for the Splunk SPLK-1003 certification exams and clear it to validate their skill set. This preparation material comes with Up To 1 year OF Free Updates And Free Demos. Place your order now and get Real SPLK-1003 Exam Questions with these offers.

Splunk SPLK-1003 certification exam is designed to test the skills and knowledge of professionals who are responsible for managing and administering Splunk Enterprise deployments. Splunk Enterprise Certified Admin certification is ideal for IT professionals who want to demonstrate their expertise in using Splunk to collect, analyze, and visualize machine-generated data. SPLK-1003 Exam covers a range of topics, including installation and configuration, data input and parsing, search and reporting, and troubleshooting and monitoring.

Splunk Enterprise Certified Admin Sample Questions (Q64-Q69):

NEW QUESTION # 64
When indexing a data source, which fields are considered metadata?

- A. time, sourcetype, source
- B. sourcetype, source, host
- C. source, host, time
- D. host, raw, sourcetype

Answer: B

NEW QUESTION # 65
A request has been made to restrict lookup files up to 500 megabytes for replication. Anything larger should not be replicated.

Which of the following parameters provides the correct control for this scenario?

- A. includeReplicatedLookupSize
- B. excludeReplicatedLookupSize
- C. maxMemoryBundleSize
- D. maxBundleSize

Answer: B

Explanation:
In Splunk Enterprise, when knowledge bundles (which include lookup files, configurations, and other knowledge objects) are replicated between search heads and indexers, administrators can control the maximum size of lookup files that are eligible for replication.
The correct parameter to use is excludeReplicatedLookupSize, defined in distsearch.conf. This parameter specifies a maximum file size (in megabytes) beyond which lookup files are excluded from bundle replication. By setting this to 500, any lookup file larger than 500 MB will not be replicated to search peers.
This is especially important for performance optimization and preventing unnecessary network load during search head to indexer communication.
Example configuration (distsearch.conf):

```
[replicationSettings]
excludeReplicatedLookupSize = 500
```

Reference (Splunk Documentation):
* distsearch.conf.spec and example # excludeReplicatedLookupSize
* Splunk Enterprise Distributed Search Manual # "Control knowledge bundle replication between search heads and indexers"
* Splunk Admin Manual # "Prevent large lookup files from being replicated"

NEW QUESTION # 66
Which of the following is an appropriate description of a deployment server in a non-cluster environment?

- A. Allows management of local Splunk instances, requires Enterprise license, handles job of sending configurations packaged as apps. can automatically restart remote Splunk instances.
- B. Allows management of remote Splunk instances, requires no license, handles job of sending configurations, can automatically restart remote Splunk instances.
- C. Allows management of remote Splunk instances, requires Enterprise license, handles job of sending configurations, can manually restart remote Splunk instances.
- D. Allows management of remote Splunk instances, requires Enterprise license, handles job of sending configurations, can automatically restart remote Splunk instances.

Answer: D

Explanation:
Reference:
https://docs.splunk.com/Documentation/Splunk/8.2.2/Updating/Deploymentserverarchitecture
"A deployment client is a Splunk instance remotely configured by a deployment server".

NEW QUESTION # 67
When would the following command be used?

- A. To verify the integrity of a SmartStore index.
- B. To verify the integrity of a SmartStore bucket.
- C. To verify the integrity of a local bucket.
- D. To verify' the integrity of a local index.

Answer: C

Explanation:
To verify the integrity of a local bucket. The command ./splunk check-integrity -bucketPath [bucket path] [- verbose] is used to verify the integrity of a local bucket by comparing the hashes stored in the l1Hashes and l2Hash files with the actual data in the bucket1. This command can help detect any tampering or corruption of the data.

NEW QUESTION # 68
How is data handled by Splunk during the input phase of the data ingestion process?

- A. Data is initially written to disk.
- B. Data is measured by the license meter.
- C. Data is broken up into events.
- D. Data is treated as streams.

Answer: D

Explanation:
Explanation
https://docs.splunk.com/Documentation/Splunk/8.0.5/Deploy/Datapipeline
"In the input segment, Splunk software consumes data. It acquires the raw data stream from its source, breaks in into 64K blocks, and annotates each block with some metadata keys."

NEW QUESTION # 69
......

We offer free demos and updates if there are any for your reference beside real SPLK-1003 real materials. By downloading the free demos you will catch on the basic essences of our SPLK-1003 guide question and just look briefly at our practice materials you can feel the thoughtful and trendy of us. About difficult or equivocal points, our experts left notes to account for them. To fill the void, we simplify the procedures of getting way, just place your order and no need to wait for arrival of our SPLK-1003 Exam Dumps or make reservation in case people get them all, our practice materials can be obtained with five minutes.
