

300-430 Simulated Test - 300-430 Exam Questions Fee

P.S. Free 2026 Cisco 300-430 dumps are available on Google Drive shared by Prep4sures: <https://drive.google.com/open?id=1wOjsJA6mz9quPnthgNuE0kfMzRI2NRf>

For the office worker, they are both busy in the job or their family; for the students, they possibly have to learn or do other things. But if they use our 300-430 test prep, they won't need so much time to prepare the exam and master exam content in a short time. What they need to do is just to spare 1-2 hours to learn and practice every day and then pass the exam with 300-430 Test Prep easily. It costs them little time and energy.

Cisco 300-430 exam tests an individual's knowledge and skills in various areas related to enterprise wireless networks. These include wireless site surveys, wireless infrastructure implementation, wireless network design, and wireless security implementation. 300-430 Exam also covers advanced topics such as location services, mobility, and network optimization.

Contemporarily, social competitions stimulate development of modern science, technology and business, which revolutionizes our society's recognition to 300-430 exam and affect the quality of people's life. According to a recent report, those who own more than one skill certificate are easier to be promoted by their boss. To be out of the ordinary and seek an ideal life, we must master an extra skill to get high scores and win the match in the workplace. Our 300-430 Exam Question can help make your dream come true. What's more, you can have a visit of our website that provides you more detailed information about the 300-430 guide torrent.

Cisco Implementing Cisco Enterprise Wireless Networks Sample Questions (Q195-Q200):

NEW QUESTION # 195

An engineer is performing a Cisco Hyperlocation accuracy test and executes the `cmxloc start` command on Cisco CMX. Which two parameters are relevant? (Choose two.)

- A. client description
- B. client MAC address
- C. AP name
- D. WLC IP address
- E. X, Y real location

Answer: B,E

Explanation:

```
[cmxadmin@cmx ~]$ cmxloc start
MAC address: 40:98:ad:71:e8:b9
```

MAC Address	X	Y	Comp Type	Location	Last Located	Current Server Time
40:98:ad:71:e8:b9	23.87	30.88	FUSION	SJ>Cisco>Floor1	2018-07-13T20:01:29.942+0200	2018-07-13T20:01:31.760+0200

https://www.cisco.com/c/en/us/td/docs/wireless/controller/technotes/88/b_ap_4800_hyperlocation_deployment_guide.html

NEW QUESTION # 196

When configuring a Cisco WLC, which CLI command adds a VLAN with VLAN ID of 30 to a FlexConnect group named BranchA-FCG?

- A. config flexconnect group BranchA-FCG vlan add 30
- B. config flexconnect group BranchA-FCG vlan 30 add
- C. config flexconnect BranchA-FCG vlan 30 add
- D. config flexconnect BranchA-FCG vlan add 30

Answer: A

NEW QUESTION # 197

An engineer manages the wireless network for a government agency. The wireless network is used for access to the corporate network. The wireless network must include the latest wIPS/wIDS detection definitions. Which action does the engineer take to ensure that this requirement is met?

- A. Update the Cisco WLC software.
- B. Update the Cisco MSE software.
- C. Configure Cisco Prime Infrastructure to push new definitions to the APs.
- D. Configure the Cisco WLC to repoll the Cisco MSE for update definitions.

Answer: B

Explanation:

In a Cisco wireless infrastructure, Wireless Intrusion Prevention System (wIPS) and Wireless Intrusion Detection System (wIDS) signatures and definitions are primarily handled by the Cisco Mobility Services Engine (MSE) or Cisco DNA Spaces (in newer deployments). These definitions include the logic and patterns used to detect rogue devices, spoofing, DoS attacks, and more.

NEW QUESTION # 198

An engineer completed the basic installation for two Cisco CMX servers and is in the process of configuring high availability, but it fails.

Which two statements about the root of the issue are true? (Choose two.)

- A. The Cisco CMX instances are installed in the same subnet.
- B. The types of the primary and secondary Cisco CMX installations differ.
- C. The sizes of the primary and secondary Cisco CMX installations differ.
- D. The delay between the primary and secondary instance is 200 ms.
- E. Both Cisco CMX installations are virtual.

Answer: B,C

Explanation:

Pre-requisites for HA

Both the primary and the secondary server should be of the same size and the same type (VM or physical appliance).

Both the primary and the secondary server should have the same Cisco CMX version.

Both the primary and the secondary server should be connected on the same subnet.

Both the primary and the secondary server should be connected on the same subnet if Layer 2 HA is required.

Both the primary and the secondary server should be IP connected with delay of less than 250ms if Layer 3 HA is used.

From Cisco CMX release 10.6.2, NTP server settings must be configured on both Primary and Secondary server instance before HA pairing starts. We recommend that you use the same NTP server on both Primary and Secondary. As a Cisco CMX admin you can also use a dedicated NTP for Primary and Secondary.

https://www.cisco.com/c/en/us/td/docs/wireless/mse/10-6/cmx_config/b_cg_cmx106/managing_cisco_cmx_system_settings.html

NEW QUESTION # 199

A wireless network has two RF groups where Cisco WLCs are joined. APs are associated with different controllers using the round-robin approach. Rogue containment must be deployed in all controllers, but the network must not be affected by any RRM neighbor packets sent by friendly APs. Which AP authentication protection type must be enabled?

- A. AP Security
- B. AP Wireless Protection Rules
- **C. AP Authentication**
- D. AP Access Control

Answer: C

Explanation:

In a wireless network with multiple controllers and APs, AP Authentication is the appropriate protection type to ensure that rogue containment is deployed without being affected by RRM (Radio Resource Management) neighbor packets sent by friendly APs. AP Authentication ensures that only authorized APs are allowed to join the network, preventing rogue APs from connecting. AP Authentication verifies the identity of APs attempting to join the network, ensuring they are legitimate and authorized. This prevents rogue APs from being added to the network and ensures that RRM neighbor packets are only sent by trusted APs.

NEW QUESTION # 200
