## Quiz 2026 HashiCorp Terraform-Associate-003: HashiCorp Certified: Terraform Associate (003) (HCTA0-003) – Valid Reliable Test Voucher

If you choose to buy the iPassleader's training plan, we can make ensure you to 100% pass your first time to attend HashiCorp Certification Terraform-Associate-003 Exam. If you fail the exam, we will give a full refund to you.

### HashiCorp Certified: Terraform Associate (003) (HCTA0-003) Sample Questions (Q207-Q212):

#### NEW QUESTION # 207

Which are forbidden actions when the terraform state file is locked? Choose three correct answers.

- A. Terraform state list
- **B. Terraform validate**
- C. Terraform for
- **D. Terraform destroy**
- **E. Terraform apply**
- F. Terraform validate

**Answer: B,D,E**

Explanation:

Explanation

The terraform state file is locked when a Terraform operation that could write state is in progress. This prevents concurrent state operations that could corrupt the state. The forbidden actions when the state file is locked are those that could write state, such as terraform apply, terraform destroy, terraform refresh, terraform taint, terraform untaint, terraform import, and terraform state \*. The terraform validate command is also forbidden, because it requires an initialized working directory with the state file. The allowed actions when the state file is locked are those that only read state, such as terraform plan, terraform show, terraform output, and terraform console. References = [State Locking] and [Command: validate]

### NEW QUESTION # 208

You have developed a new cloud-based service that uses proprietary APIs and want to use Terraform to create, manage, and delete users from the service. How can Terraform interact with the service?

- A. Develop and publish a custom provider to interact with the service using its proprietary APIs.
- B. Terraform can manage users for any service that is hosted on a public cloud provider.

**Answer: A**

Explanation:

Detailed Explanation:

\* Rationale for Correct Answer (B): Terraform interacts with external systems through providers.

Since this is a new proprietary service with its own API, Terraform does not support it by default. You would need to develop a custom provider that implements Terraform's provider interface and interacts with the proprietary APIs to manage resources like users.

\* Analysis of Incorrect Option:

\* A. Any service hosted on a public cloud provider: Not true. Terraform can only manage services that have providers (official or custom). Just being "hosted on a public cloud" doesn't guarantee Terraform support.

\* Key Concept: Terraform providers act as the bridge between Terraform and external APIs. For unsupported services, a custom provider must be developed.

Reference: Terraform Exam Objective - Manage Terraform Resources and Providers.

### NEW QUESTION # 209

Which of the following command would be use to access all of the attributes and details of a resource managed by Terraform?

- A. Terraform state list
- B. Terraform get provider\_type\_name
- C. Terraform state list provider\_type\_name
- D. Terraform state show ' provider\_type\_name

**Answer: D**

Explanation:

This is the command that you would use to access all of the attributes and details of a resource managed by Terraform, by providing the resource address as an argument. For example, terraform state show 'aws\_instance.example' will show you all the information about the AWS instance named example.

### NEW QUESTION # 210

The \_\_\_\_\_ determines how Terraform creates, updates, or delete resources.

- A. Terraform core
- B. Terraform provider
- C. Terraform configuration
- D. Terraform provisioner

**Answer: B**

Explanation:

This is what determines how Terraform creates, updates, or deletes resources, as it is responsible for understanding API interactions

with some service and exposing resources and data sources based on that API.

### NEW QUESTION # 211

You can reference a resource created with `for_each` using a Splat ( `*` ) expression.

- A. True
- B. False

**Answer: B**

Explanation:

Explanation

You cannot reference a resource created with `for_each` using a splat ( `*` ) expression, as it will not work with resources that have non-numeric keys. You need to use a `for` expression instead to iterate over the resource instances.

### NEW QUESTION # 212

.....

There is no denying that no exam is easy because it means a lot of consumption of time and effort. Especially for the upcoming Terraform-Associate-003 exam, although a large number of people to take the exam every year, only a part of them can pass.
