問題 #38

A company's website runs on an Amazon EC2 instance and uses Auto Scaling to scale the environment during peak times. Website users across the world are experiencing high latency due to static content on the EC2 instance, even during non-peak hours. When completion of steps will resolve the latency issue? (Select TWO)

- A. Host the application code on AWS Lambda
- B. Scale vertically by resizing the EC2 instances
- C. Double the Auto Scaling group's maximum number of servers
- **D. Create an Amazon CloudFront distribution to cache the static content**
- **E. Store the application's static content in Amazon S3**

答案：D,E

解題說明：

The combination of steps that will resolve the latency issue is to create an Amazon CloudFront distribution to cache the static content and store the application's static content in Amazon S3. This way, the company can use CloudFront to deliver the static content from edge locations that are closer to the website users, reducing latency and improving performance. The company can also use S3 to store the static content reliably and cost-effectively, and integrate it with CloudFront easily. The other options either do not address the latency issue, or are not necessary or feasible for the given scenario.

問題 #39

A Developer has created an S3 bucket `s3://mycoolapp` and has enabled server access logging that points to the folder `s3://mycoolapp/logs`. The Developer moved 100 KB of Cascading Style Sheets (CSS) documents to the folder `s3://mycoolapp/css`, and then stopped work. When the developer came back a few days later, the bucket was 50 GB. What is the MOST likely cause of this situation?

- A. S3 replication was enabled on the bucket.
- B. The CSS files were not compressed and S3 versioning was enabled.
- **C. Logging into the same bucket caused exponential log growth.**
- D. An S3 lifecycle policy has moved the entire CSS file to S3 Infrequent Access.

答案：C

解題說明：

Explanation

Refer AWS documentation - S3 Server logs

To turn on log delivery, you provide the following logging configuration information:

* The name of the target bucket where you want Amazon S3 to save the access logs as objects. You can have logs delivered to any bucket that you own that is in the same Region as the source bucket, including the source bucket itself. We recommend that you save access logs in a different bucket so that you can easily manage the logs. If you choose to save access logs in the source bucket, we recommend that you specify a prefix for all log object keys so that the object names begin with a common string and the log objects are easier to identify. When your source bucket and target bucket are the same bucket, additional logs are created for the logs that are written to the bucket. This behavior might not be ideal for your use case because it could result in a small increase in your storage billing. In addition, the extra logs about logs might make it harder to find the log that you're looking for.

問題 #40

A Developer is writing a serverless application that requires that an AWS Lambda function be invoked every 10 minutes.

What is an automated and serverless way to trigger the function?

- A. Configure an environment variable named PERIOD for the Lambda function. Set the value to 600.
- B. Deploy an Amazon EC2 instance based on Linux, and edit its /etc/crontab file by adding a command to periodically invoke the Lambda function.
- C. Create an Amazon SNS topic that has a subscription to the Lambda function with a 600-second timer.
- **D. Create an Amazon CloudWatch Events rule that triggers on a regular schedule to invoke the Lambda function.**

答案： D

問題 #41

An application stores images in an S3 bucket. Amazon S3 event notifications are used to trigger a Lambda function that resizes the images. Processing each image takes less than a second.

How will AWS Lambda handle the additional traffic?

- A. Lambda will handle the requests sequentially in the order received.
- B. Lambda will add more compute to each execution to reduce processing time.
- C. Lambda will process multiple images in a single execution.
- **D. Lambda will scale out to execute the requests concurrently.**

答案： D
