

HPE7-A11 Updated Demo - Exam HPE7-A11 Fee

Many platforms are offering "TestPassed" study material for the HP HPE7-A11 certification exam. But most of them are not valid and people who study with them fail in the HPE Network Campus Access Professional Architect Exam (HPE7-A11) Exam and lose their resources. "TestPassed" offers actual HP HPE7-A11 Exam Questions that will help you pass the exam on the first try and save your money. These HPE7-A11 questions are compiled under the guidance of thousands of professionals from around the world.

Our HPE7-A11 study materials boost the self-learning and self-evaluation functions so as to let the clients understand their learning results and learning process, then find the weak links to improve them. Through the self-learning function the learners can choose the learning methods by themselves and choose the contents which they think are important. Through the self-evaluation function the learners can evaluate their mastery degree of our HPE7-A11 Study Materials and their learning process. The two functions can help the learners adjust their learning arrangements and schedules to efficiently prepare the exam.

Exam HPE7-A11 Fee - Latest HPE7-A11 Exam Tips

With the intense competition in labor market, it has become a trend that a lot of people, including many students, workers and so on, are trying their best to get a HPE7-A11 certification in a short time. They all long to own the useful certification that they can have an opportunity to change their present state, including get a better job, have a higher salary, and get a higher station in life and so on, but they also understand that it is not easy for them to get a HPE7-A11 Certification in a short time. If you are the one of the people who wants to get a certificate, we are willing to help you solve your problem.

HPE Network Campus Access Professional Architect Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

A global cruise line company needs to refresh its current fleet. They will refresh the insides' of the ship to be cost-effective and increase their sustain ability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware. They start with the smallest ship with a maximum of 800 guests. Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft). Each technical room is connected by a single OM2 pair to the IDF, with lengths between

100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running instantOS (less than 300 APs), the customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed. Based on the best practices, what should be recommended as the most cost-effective switch model for the technical rooms?

- A. HPE Aruba Networking 6300M 12p Class8 PoE and 36p Class6 PoE HPE Smart Rate 1G/2.5G/5G and 2p 50G and 2p 10G
- B. HPE Aruba Networking 6200M 36G 12SR5 Class6 PoE 4SFP+
- **C. HPE Aruba Networking 6300M 24p HPE Smart Rate 1 G/2.5G/5G/10G Class6 PoE and 2p 50G and 2p 25G**
- D. HPE Aruba Networking 6200M 24G Class4 PoE 4SFP+

Answer: C

Explanation:

For technical rooms requiring redundant power and an upgrade to 10GbE uplinks to handle increased network traffic, the most cost-effective switch model is the HPE Aruba Networking 6300M 24p HPE Smart Rate 1G/2.5G/5G/10G Class6 PoE and 2p 50G and 2p 25G. This model offers the necessary port density and speed flexibility, with support for high-power PoE devices and uplink capabilities that meet the future-proofing needs for technical rooms on the cruise ships. The switch's redundant power capabilities ensure high availability and resilience for critical technical room infrastructure, aligning with the customer's requirements for sustainability, cost-effectiveness, and preparedness for future hardware refreshes without extensive unused port capacities.

NEW QUESTION # 20

What is the main purpose of an HPE FlexFabric switch in a campus network?

- A. To enable wireless networking
- **B. To optimize the backbone of the network**
- C. To connect end-user devices to the network
- D. To provide power over Ethernet

Answer: B

Explanation:

HPE FlexFabric switches are primarily used in the core or distribution layers of a campus network. These switches are designed to connect multiple network devices across different segments of the network, ensuring high-performance and optimized backbone connections.

NEW QUESTION # 21

What is the recommended bandwidth of a VSX Inter-Switch Link?

- A. It should be equal to the sum of the downlink ports' bandwidth.
- B. It should be equal to the sum of the uplink ports' bandwidth.
- **C. It should be equal or higher than the speed of the uplink.**
- D. It should be the same speed as the one used for VSX Keepalive speed bandwidth.

Answer: C

Explanation:

The VSX Inter-Switch Link (ISL) must support all traffic that may need to traverse between the two VSX peers during convergence or asymmetric forwarding. Aruba recommends sizing the ISL equal to or greater than the uplink speed, ensuring sufficient bandwidth for peak forwarding without creating an ISL bottleneck.

NEW QUESTION # 22

A global furniture retail company called 'No-Stair Inc.' requests you design their new WLAN infrastructure for a global footprint. Each location of 'No-Stair Inc.' has a similar layout: three small manager offices, a warehouse, and a 'retail' area. The 'retail' area and the warehouse together amount to 95% of the location. The IT department of the company is minimally engaged in their LAN refresh so the CTO of the company has shared the information below. Current WLAN infrastructure is based on the 802.11n "WiFi4Less" access-points series (both model 2013-INT (2.4 only internal antenna) and model 2019-EXT (dual-band external antenna only)). These AP models are standalone without any centralized management. Last year 'No-Stair Inc.' ran a project called 'secure'. It ensured that all needed network security was implemented to be fully compliant with their security standards. During this project, they also upgraded the AAA infrastructure to handle the increased AAA requests. No additional Wi-Fi or security requirements are listed for this WLAN refresh, which means that 'No-Stair Inc.' will continue to use bridged SSIDs, with local breakout into different VLANs.

The CTO of 'No-Stair Inc.' understands the need for you to ask additional questions to deliver the design. The questions may be sent in written form and will be answered within two weeks. Which additional question is correct in order to collect needed information for the WLAN design?

- A. Is there a current RF survey report that you can share?
- B. What type of fiber connection is used between the core and access layer switches?
- C. Is there enough cooling in the MDF?
- D. Who is the campus switch vendor?

Answer: A

NEW QUESTION # 23

ACME retail has 38 locations spread out across five US states and two provinces in Canada.

They are looking to grow 20% over the next two years. They have an HQ with a staff of 200 employees. The organization has eight Regional Managers and two VPs who work from home and the road. Stores typically have 17 employees on average per location. The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main location is 240K sq ft (22300 sq m) and the Canadian warehouse is 130K sq ft (12100 sq m). The forklifts on the loading docks are equipped with a wireless tablet on board. A typical store is reportedly about 60,000 sq ft (5575 sq m) and smaller stores are planned at 25,000 sq ft (2320 sq m). The locations need to expand the abilities to vendors that need to add setup displays or interactive kiosks in the stores. The current infrastructure was installed in 2015 and used wireless N technology in a coverage model. The wiring is Cat5, and they are unsure of the fiber connections. The inventory is all placed on the floor when it is delivered to the local store. Inventory control is handled through Zebra barcode scanners, and they have had a lot of issues in getting signals throughout the stores and this makes monthly inventory difficult. The organization has a small help desk to troubleshoot issues that happen at the retail locations and PC support for the office. The company is looking to upgrade away from the current PBX system later this year. With the need to grow and cut costs, they are interested in moving the data to the cloud but need to get almost real-time inventory control for the online service to function.

The network has all been wired over the last ten years, but with the new systems being all wireless, they have seen the trend to offer wireless to all the vendors for their needs but also would be to allow employees, guests, and contractors all to use it. With the new IT director starting next week, the project has been set by the CTO of the company. The marketing group has asked how they can interact with the customers and get more info, while the IT support desk needs to cut staff in half.

The office has an MDF and two IDFs located on floors one and two. The MDF is in the basement, and you have multiple WAN circuits for the HQ links. Each store has a local handoff from the cable company (ethernet) in the middle of the store in the office, so distance for the wiring is not an issue.

The customer has budget concerns but does want something that could last 7+ years.

Which two projects does the customer have in the planning state? (Choose two.)

- A. Inventory Control System
- B. VoIP upgrade
- C. kiosks/display station
- D. new POS system

Answer: A,B

Explanation:

ACME Retail is in the planning stages of upgrading their current PBX system to a VoIP system, as indicated by their intention to move away from the existing PBX system later in the year. This upgrade is part of their overall network infrastructure overhaul to

incorporate modern best practices. Additionally, the company is facing challenges with their current inventory control system, particularly with Zebra barcode scanners having signal issues throughout the stores, making monthly inventory processes difficult. Improving the inventory control system to achieve almost real-time inventory for their online service is a critical aspect of their growth and cost-cutting strategy, hence it's in the planning stage as well.

NEW QUESTION # 24

.....

TestPassed HPE Network Campus Access Professional Architect Exam (HPE7-A11) exam dumps save your study and preparation time. Our experts have added hundreds of HPE Network Campus Access Professional Architect Exam (HPE7-A11) questions similar to the real exam. You can prepare for the HPE Network Campus Access Professional Architect Exam (HPE7-A11) exam dumps during your job. You don't need to visit the market or any store because TestPassed HPE Network Campus Access Professional Architect Exam (HPE7-A11) exam questions are easily accessible from the website.

Exam HPE7-A11 Fee: <https://www.testpassed.com/HPE7-A11-still-valid-exam.html>

You can free download HPE7-A11 sure demo to have a try before you purchase HPE7-A11 complete dumps, Our HPE7-A11 updated study material covers all exam questions of exam center which guarantee candidates to clear exam successfully and obtain certified certification, We are offering excellent and valid HP HPE7-A11 practice questions and exam simulation inside, HP HPE7-A11 Updated Demo We would like to tell you how to buy the most suitable and helpful study materials.

If I wasn't near an outlet when the battery gave up, I was out of commission until a power socket was available, The HPE7-A11 HPE Network Campus Access Professional Architect Exam PDF solved questions would prove to be the Exam HPE7-A11 Fee significant and fundamental source of learning for your certification in reasonable price.

Pass Guaranteed Quiz 2026 HP Professional HPE7-A11 Updated Demo

You can free download HPE7-A11 sure demo to have a try before you purchase HPE7-A11 complete dumps, Our HPE7-A11 updated study material covers all exam questions of exam center Latest HPE7-A11 Exam Tips which guarantee candidates to clear exam successfully and obtain certified certification.

We are offering excellent and valid HP HPE7-A11 practice questions and exam simulation inside, We would like to tell you how to buy the most suitable and helpful study materials.

You can decide which version is what you HPE7-A11 need actually and then buy the version of HPE Network Campus Access Professional Architect Exam exam torrent you want.
