Appian Senior Developer Sample Questions (Q67-Q72):

NEW QUESTION # 67
You need to create a web API so that an external system can start a process in your app.
Which two statements are true about using a service account to authenticate the system? (Choose two.)

- A. The service account must be configured from within the web API object.
- B. The service account must be granted access to that web API via group management.
- C. The service account must be a user in the Service Accounts group.
- D. The service account is created as any other object in Appian.

Answer: B,C

Explanation:
The service account must be granted access to the web API, typically via group management, to allow authenticated calls.
The service account must be a user in the Service Accounts group to be used for authentication in integrations such as web APIs.

NEW QUESTION # 68
You need to implement a Gender dropdown, where the choice labels may need to be altered in the future. The transactional database tables rely on this data for reporting, so the data must be accurate.
What is the recommended action?

- A. Create an expression rule and modify it as per the business requirement.
- B. Create a constant and modify it as needed per the business requirement.
- C. Create these entries in a table and reference them through a query entity rule as per the business requirement.

Answer: C

Explanation:
Storing the dropdown entries in a database table and referencing them through a query entity rule ensures data integrity, flexibility for future changes, and accuracy for reporting purposes.

NEW QUESTION # 69
You're creating an application which has integrations with multiple systems using different protocols.
Match each process model component or node to the appropriate protocol.
Note: Each protocol will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

Answer:

Explanation:

NEW QUESTION # 70
You're refining a story for a centralized distribution center that extends the current application by allowing inventory managers to review orders.
These orders are created through a record action that various workshops access from a shared Appian site.
Which consideration best suits this use case?

- A. How will you handle errors resulting from a failed integration as a result of the workshops using an external system to place orders?
- B. What are the personas that will be utilizing this application so that an Appian group structure can be developed and maintained?
- C. What components have already been built relating to this piece of functionality so that you can reuse them and speed up development?

Answer: C

Explanation:
Identifying the personas (such as inventory managers and workshop users) ensures you can design and maintain an appropriate Appian group structure for managing access and permissions, which is critical for a centralized application accessed by multiple roles.

NEW QUESTION # 71
You run a report on different employee transactions by using a View.
You encounter the following error: "a!queryEntity: An error occurred while retrieving the data." What is the most likely root cause of this error?

- A. The view contains a large number of rows, requiring more time to fetch the data.
- B. The view doesn't have a column mapped as a primary key in its corresponding CDT.
- C. The rule contains a missing syntax.

Answer: B

Explanation:
The most likely root cause is that the view doesn't have a column mapped as a primary key in its corresponding CDT. Appian requires a primary key mapping for querying views to ensure data integrity and identification.

NEW QUESTION # 72
