Topic 5	<ul style="list-style-type: none">• Technology Components for HTTP-based Communication: In this section of the exam, the topics covered include how to administer ICM and install and configure SAP Web Dispatcher.

SAP Certified Technology Consultant - SAP S/4HANA System Administration Sample Questions (Q56-Q61):

NEW QUESTION # 56

You are preparing an installation of an AS ABAP-based SAP system. You already downloaded all software that Maintenance Planner can calculate. What else must you download?

- A. SPAM/SAINT update
- B. SAP Host Agent
- C. SAP kernel
- **D. SAPCAR**

Answer: D

Explanation:

When preparing for the installation of an AS ABAP-based SAP system, after downloading all software components calculated by the Maintenance Planner, it is essential to download SAPCAR (D). SAPCAR (SAP Compression and Archive tool) is a command-line utility used to compress and decompress SAP software packages and patches, which are typically delivered in .SAR or .CAR file formats. This tool is crucial for extracting the installation and update files that are required for setting up the SAP system.

NEW QUESTION # 57

Which parameters are mandatory when using the HDBLCM tool to install the SAP HANA database system in batch mode? Note: There are 2 correct answers to this question.

- A. Password of user sapadm
- B. Data and log path
- C. SAP HANA System ID (SID)
- D. Installation path

Answer: A,C

- A. R3load
- B. tp
- C. RDDNEWPP
- D. RDDIMPDP
- E. R3trans

Answer: B,D,E

NEW QUESTION # 59

You want to create an ABAP task list in a development system to transport it to the production system What must you do?

Note: There are 2 correct answers to this question.

- A. Assign the task list to a package
- B. Assign the task list to a workbench transport request.
- C. Assign the task list to a customizing transport request.
- D. Activate the task list

Answer: A,C

NEW QUESTION # 60

When performing a local client copy, which client copy profiles are available? Note: There are 3 correct answers to this question

- A. Customizing Including Cross-Client Customizing
- B. All Client-Specific Data w/o Change Documents
- C. Application Data and User Master Data
- D. Customizing, User Master Records and User Variants
- E. User Master Records and Authorization Profiles

Answer: B,D,E

Explanation:

Local client copy in SAP S/4HANA is a process used to copy data within the same SAP system from one client to another. The client copy profiles determine the type of data that will be copied. The available profiles include:

* A. Customizing, User Master Records, and User Variants: This profile allows for the copying of customization settings, user master records (which include user login details and authorizations), and user-specific settings and variants for reports and screens. This profile is typically used when setting up a new client that needs to inherit specific configurations and user settings from an existing client.

* C. User Master Records and Authorization Profiles: This profile focuses on copying only the user master data and their associated authorization profiles. It's particularly useful when the aim is to replicate user access rights and roles without transferring other system data or customizations.

* E. All Client-Specific Data w/o Change Documents: This comprehensive profile copies all data specific to a client, excluding change documents. Change documents log changes made to certain objects in the system and might not always be necessary or desirable to copy, especially in testing or

* sandbox environments where the focus is on the current state rather than the change history.

These profiles provide the flexibility to perform client copies tailored to specific needs, whether for testing, training, or system setup purposes, ensuring that only the required data is transferred.
