Besides, you can consolidate important knowledge for you personally and design customized study schedule or to-do list on a daily basis.

Salesforce Administer, Extend, and Automate Salesforce Sample Questions (Q48-Q53):

NEW QUESTION # 48

The administrator at Universal Containers does a soft launch of the Salesforce Authenticator app and allows users to optionally use it to log in. The administrator would now like to look at how many users have successfully used it since it was rolled out.

What are two ways the administrator can get this Information?

Choose 2 answers

- A. Create a new view In Identity Verification History, specifying Method.
- B. Export Login History and filter based off of Authentication Method Reference,
- C. Open the Login Access Policies In Setup which shows how many users are using MFA.
- D. Run a session setting report, specifying login methods by user.

Answer: A,B

Explanation:

Salesforce Authenticator is an app that adds an extra layer of security for logging into Salesforce by requiring users to verify their identity using their mobile device after entering their username and password on Salesforce login page. To see how many users have successfully used Salesforce Authenticator since it was rolled out, an administrator can use two methods:

A) Create a new view In Identity Verification History, specifying Method.

Identity Verification History is a tool that shows information about each identity verification event for users in your org, such as the date and time, the verification method used, the IP address, and the status of the verification. By creating a new view in Identity Verification History and specifying the method as Salesforce Authenticator, an administrator can see how many users have used the app to verify their identity when logging in. Reference: https://help.salesforce.com/s/articleView?id=sf.identity_verification_history.htm&type=5

D) Export Login History and filter based off of Authentication Method Reference.

Login History is a tool that shows information about each login attempt for users in your org, such as the date and time, the username, the source IP address, the login type, and the status of the login. By exporting Login History as a CSV file and filtering based on the Authentication Method Reference column, an administrator can see how many users have used Salesforce Authenticator as their authentication method when logging in. Reference: https://help.salesforce.com/s/articleView?id=sf.monitoring_login_history.htm&type=5

NEW QUESTION # 49

Ursa Major Solar has a junction object that connects Docs with Solar Panels. The administrator needs users to be able to see all the solar panels that a Doc is related to. Users already have access to the Doc and the Junction, but not the Solar Panel object.

What access does the user need to be able to see the solar panel records?

- A. Read permission is required on at least one master record.
- B. Access permission is not required on either master record.
- C. Create permission is required on both master records.
- D. Read permission is required on both master records.

Answer: D

NEW QUESTION # 50

An administrator at Cloud Kicks has been asked to clean up old approval delete.

Which two things could prevent the process from being deleted?

Choose 2 answers

- A. There are pending approval requests in the Recycle Bin.
- B. The process is marked as inactive.
- C. The process is marked as active.
- D. There is a report in the Administrative Reports folder.

Answer: A,C

NEW QUESTION # 51

The administrator at Cloud Kicks has been asked to delete a large number of quote line items. They receive a .csv file with the record IDs to be deleted. The administrator uses Data Loader to delete them and selects Use Bulk API. When the job runs, every record shows an 'entity is deleted' error in the error file that is created.

What is the reason for the error?

- A. One of the IDs in the batch referenced a record that was in the recycle bin.
- B. The batch size selected was greater than the 200 record limit.

- C. This Is the standard error message when records are deleted using Bulk API.
- D. Deleting with Data Loader can only be done In Batch API mode.

Answer: A

Explanation:

One of the IDs in the batch referenced a record that was in the recycle bin because deleting records with Bulk API does not delete records permanently but moves them to the recycle bin. Therefore, if a record ID in the batch matches an existing record ID in the recycle bin, an 'entity is deleted' error will occur.

NEW QUESTION # 52

Universal Containers purchased Field Service Lightning Licenses in Production and wants to make these license available in an active development sandbox with the minimum development impact.

How should an administrator create these licenses in the sandbox?

- A. Merge Production and the sandbox using a template.
- **B. Refresh the sandbox from production.**
- C. Submit a Salesforce support case.
- D. Use the Match Production Licenses tool.

Answer: B

NEW QUESTION # 53

.....

In the information era, IT industry is catching more and more attention. In the society which has a galaxy of talents, there is still lack of IT talents. Many companies need IT talents, and generally, they investigate IT talents's ability in according to what IT related authentication certificate they have. So having some IT related authentication certificate is welcomed by many companies. But these authentication certificate are not very easy to get. Salesforce ADX-211 is a quite difficult certification exams. Although a lot of people participate in Salesforce ADX-211 exam, the pass rate is not very high.
