Examcollection JN0-336 Questions Answers - JN0-336 Preparation

For candidates who are going to attend the exam, the pass rate may be an important consideration while choose the JN0-336 exam materials. With pass rate more than 98.75%, we can ensure you pass the exam successfully if you choose us. JN0-336 exam torrent will make your efforts pay off. We also pass guarantee and money back guarantee if you fail to pass the exam, and your money will be returned to your payment count. In addition, JN0-336 Study Materials provide you with free update for 365 days, and the

update version will be sent to your email automatically.

Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q84-Q89):

NEW QUESTION # 84
You are preparing a proposal for a new customer who has submitted the following requirements for a vSRX deployment:
-- globally distributed,
-- rapid provisioning,
-- scale based on demand,
-- and low CapEx.
Which solution satisfies these requirements?

- A. VMWare ESXi
- B. Juniper ATP Cloud
- C. Network Director
- D. AWS

Answer: D

Explanation:
The solution that satisfies the requirements for a vSRX deployment is AWS. AWS (Amazon Web Services) is a cloud computing platform that provides on-demand services such as infrastructure, platform, software, and database as a service. AWS is globally distributed, meaning that it has data centers in multiple regions around the world. AWS also allows rapid provisioning, meaning that you can launch vSRX instances in minutes using preconfigured Amazon Machine Images (AMIs) or custom templates. AWS also enables scaling based on demand, meaning that you can adjust the number and size of vSRX instances according to your network traffic and performance needs. AWS also has low CapEx (capital expenditure), meaning that you only pay for what you use and do not need to invest in hardware or maintenance costs.

NEW QUESTION # 85
You are asked to ensure that if the session table on your SRX Series device gets close to exhausting its resources, that you enforce a more aggress.ve age-out of existing flows.
In this scenario, which two statements are correct? (Choose two.)

- A. The high-watermark configuration specifies the percentage of how much of the session table can be allocated before applying a more aggressive age-out timer
- B. The early-ageout configuration specifies the timeout value, in seconds, that will be applied once the high-watermark value is met.
- C. The early-ageout configuration specifies the timeout value, in seconds, that will be applied once the low-watermark value is met.
- D. The high-watermark configuration specifies the percentage of how much of the session table is left before disabling a more aggressive age- out timer.

Answer: A,B

Explanation:
The early-ageout configuration specifies the timeout value, in seconds, that will be applied once the high- watermark value is met. The high-watermark configuration specifies the percentage of how much of the session table can be allocated before applying a more aggressive age-out timer. This ensures that the session table does not become full and cause traffic issues, and also ensures that existing flows are aged out quickly when the table begins to get close to being full.

NEW QUESTION # 86
You are currenty using a third-party threat analyzer. You want your SRX Series device to send decrypted SSE traffic to......
In this scenario, which feature should you configure on the SRX device?

- A. SSL decryption mirroring
- B. IPS IPanotify action
- C. JSA vulnerability assessment
- D. Phase 2 proxy ID

Answer: B,C

NEW QUESTION # 87

Which two statements are true about the vSRX? (Choose two.)

- A. It does not have VMXNET3 vNIC support.
- B. It has VMXNET3 vNIC support.
- C. UNIX is the base OS.
- D. Linux is the base OS.

Answer: B,D

NEW QUESTION # 88

You are configuring logging for a security policy.
In this scenario, in which two situations would log entries be generated? (Choose two.)

- A. every 60 seconds
- B. every 10 minutes
- C. at session initialization
- D. at session close

Answer: C,D

Explanation:
Log entries would be generated in two situations: at session initialization and at session close. At session initialization, the log entry would include details about the connection, such as the source and destination IP addresses, the service being used, and the action taken by the security policy. At session close, the log entry would include details about the connection, such as the duration of the session, the bytes sent/received, and the action taken by the security policy. For more information, you can refer to the Juniper Security documentation at
