Test Fortinet FCP_FGT_AD-7.6 Price - Latest FCP_FGT_AD-7.6 Material

We have strong technical and research capabilities on this career for the reason that we have a professional and specialized expert team devoting themselves on the compiling the latest and most precise FCP_FGT_AD-7.6 exam materials. All questions and answers of FCP_FGT_AD-7.6 learning guide are tested by professionals who have passed the FCP_FGT_AD-7.6 Exam. All the experts we hired have been engaged in professional qualification exams for many years. The hit rate for FCP_FGT_AD-7.6 exam torrent is as high as 99%. You will pass the FCP_FGT_AD-7.6 exam for sure with our FCP_FGT_AD-7.6 exam questions.

Fortinet FCP - FortiGate 7.6 Administrator Sample Questions (Q32-Q37):

NEW QUESTION # 32
An administrator has configured the following settings:

```
config system settings
  set ses-denied-traffic enable
end

config system global
  set block-session-timer 30
end
```

What are the two results of this configuration? (Choose two.)

- A. Session helpers are disabled for denied traffic.
- B. Denied users are blocked for 30 minutes.
- C. A session for denied traffic is created.
- D. The number of logs generated by denied traffic is reduced.

Answer: C,D

Explanation:
set ses-denied-traffic enable → ensures FortiGate creates a session entry even for denied traffic.
set block-session-timer 30 → sets the duration (30 seconds) that denied sessions remain in the session table. This prevents repeated logging for every packet in the same denied flow, thereby reducing the number of logs generated.

NEW QUESTION # 33
Refer to the exhibit. An administrator has created a new firewall address to use as the destination for a static route. Why is the administrator not able to select the new address in the Destination field of the new static route?

- A. In the new firewall address, the FQDN address must first beresolved.
- B. In the new firewall address, Routing configuration must be enabled.
- C. In the new static route, the administrator must select Named Address.
- D. In the new static route, the administrator must first set the interface to port2.

Answer: B

Explanation:
To use an FQDN-based address object as a destination in a static route, the "Routing configuration" option must be enabled in the firewall address settings. Without this, the address cannot be selected for routing.

NEW QUESTION # 34
Refer to the exhibits. An administrator configured both members of an HA cluster at the same time. After one week of monitoring, the administrator wants to verify the HA failover performance.
How can the administrator force a failover?

HQ-NGFW-1 HA configuration

```
HQ-NGFW-1 # config system ha

HQ-NGFW-1 (ha) # show
config system ha
    set group-id 5
    set group-name "Training"
    set mode a-p
    set password ENC nmk7zGYiRrux1
    set hbdev "port7" 0
    set session-pickup enable
    set override disable
    set priority 200
    set monitor "port1"
end
```

HQ-NGFW-2 HA configuration

```
HQ-NGFW-2 (ha) # show
config system ha
    set group-id 5
    set group-name "Training"
    set mode a-p
    set password ENC n40G3dmn0K50s
    set hbdev "port7" 0
    set session-pickup enable
    set override disable
    set priority 100
    set monitor "port1"
end
```

- A. The administrator must reset the HA uptime on HQ-NGFW-1.
- B. The administrator must set the parameter override to enable on HQ-NGFW-2.
- C. The administrator must increase the HA priority on HQ-NGFW-2.
- D. The administrator must set the monitored port to down on HQ-NGFW-1.

Answer: D

Explanation:
Both FortiGates are in an active-passive (a-p) HA cluster with override disabled. This means failover is triggered only if the primary (HQ-NGFW-1) becomes unavailable or monitored interfaces fail. To test failover performance, the administrator can set the monitored interface (port1) down on HQ-NGFW-1, which will force a failover to HQ-NGFW-2.

NEW QUESTION # 35
What are two features of FortiGate FSSO agentless polling mode? (Choose two.)

- A. FortiGate uses the SMB protocol to read the event viewer logs from the DCs.
- B. FortiGate uses the AD server as the collector agent.
- C. FortiGate does not support workstation check.
- D. FortiGate directs the collector agent to use a remote LDAP server.

Answer: A,C

NEW QUESTION # 36
Which two statements are true regarding FortiGate HA configuration synchronization? (Choose two.)

- A. Checksums of devices are compared against each other to ensure configurations are the same.
- B. Incremental configuration synchronization can occur only from changes made on the primary FortiGate device.
- C. Incremental configuration synchronization can occur from changes made on any FortiGate device within the HA cluster.
- D. Checksums of devices will be different from each other because some configuration items are not synced to other HA members.

Answer: A,B

Explanation:
In FortiGate HA (High Availability) configuration, checksums of device configurations are compared to ensure they are synchronized and identical across the cluster. Incremental synchronization can only happen from changes made on the primary device to ensure consistency and integrity across the cluster members.
Changes made on non-primary devices do not initiate synchronization.

NEW QUESTION # 37

......

If you are boring for current jobs and want to jump out of bottleneck, an IT certification will be a good way out for you. VCE4Plus offers the highest passing rate of FCP_FGT_AD-7.6 latest practice exam online to help you restart now. 3-5 years' experience in IT field and a professional certification will help you be qualified for some senior position or management positions. FCP_FGT_AD-7.6 latest practice exam online can be your first step for Fortinet certification and help you pass exam 100%.
