Professional-Cloud-Architect考試資訊 & Professional-Cloud-Architect權威考題

誰想要獲得Google Professional-Cloud-Architect認證？我們所知道的該考試是非常具有挑戰性的，隨著最新的Professional-Cloud-Architect考古題上線，您將更方便快捷的獲得認證。如果您不相信我們，可以先下載我們的免費PDF試用版的Professional-Cloud-Architect問題和答案，我們將保證您100%成功。對於擁有高品質的Google Professional-Cloud-Architect題庫是絕對值得信賴的，為了配合當真正的考試，我們的專家在不斷的更新我們的問題和答案。如果使用我們的Professional-Cloud-Architect考古題沒有通過考試，我們將無條件的退款。

最新的 Google Cloud Certified Professional-Cloud-Architect 免費考試真題 (Q64-Q69):

問題 #64

Your company operates nationally and plans to use GCP for multiple batch workloads, including some that are not time-critical. You also need to use GCP services that are HIPAA-certified and manage service costs. How should you design to meet Google best practices?

- A. Provisioning preemptible VMs to reduce cost. Discontinue use of all GCP services and APIs that are not HIPAA-compliant.
- B. Provision standard VMs to the same region to reduce cost. Disable and then discontinue use of all GCP services and APIs that are not HIPAA-compliant.
- C. Provision standard VMs in the same region to reduce cost. Discontinue use of all GCP services and APIs that are not HIPAA-compliant.
- D. Provisioning preemptible VMs to reduce cost. Disable and then discontinue use of all GCP and APIs that are not HIPAA-

compliant.

答案： D

解題說明：

<https://cloud.google.com/compute/docs/instances/preemptible>

If your apps are fault-tolerant and can withstand possible instance preemptions, then preemptible instances can reduce your Compute Engine costs significantly. For example, batch processing jobs can run on preemptible instances. If some of those instances stop during processing, the job slows but does not completely stop. Preemptible instances complete your batch processing tasks without placing additional workload on your existing instances and without requiring you to pay full price for additional normal instances.

問題 #65

Your company just finished a rapid lift and shift to Google Compute Engine for your compute needs. You have another 9 months to design and deploy a more cloud-native solution. Specifically, you want a system that is no-ops and auto-scaling. Which two compute products should you choose? Choose 2 answers

- A. Compute Engine with managed instance groups
- **B. Google App Engine Standard Environment**
- **C. Google Kubernetes Engine with containers**
- D. Compute Engine with containers
- E. Compute Engine with custom instance types

答案： B,C

解題說明：

B: With Container Engine, Google will automatically deploy your cluster for you, update, patch, secure the nodes.

Kubernetes Engine's cluster autoscaler automatically resizes clusters based on the demands of the workloads you want to run.

C: Solutions like Datastore, BigQuery, AppEngine, etc are truly NoOps.

App Engine by default scales the number of instances running up and down to match the load, thus providing consistent performance for your app at all times while minimizing idle instances and thus reducing cost.

Note: At a high level, NoOps means that there is no infrastructure to build out and manage during usage of the platform. Typically, the compromise you make with NoOps is that you lose control of the underlying infrastructure.

問題 #66

Your BigQuery project has several users. For audit purposes, you need to see how many queries each user ran in the last month.

- A. Use Cloud Audit Logging to view Cloud Audit Logs, and create a filter on the query operation to get the required information.
- B. Use 'bq show' to list all jobs. Per job, use 'bq ls' to list job information and get the required information.
- **C. In the BigQuery interface, execute a query on the JOBS table to get the required information.**
- D. Connect Google Data Studio to BigQuery. Create a dimension for the users and a metric for the amount of queries per user.

答案： C

解題說明：

Explanation

問題 #67

You are using a single Cloud SQL instance to serve your application from a specific zone. You want to introduce high availability. What should you do?

- A. Create a read replica instance in a different region
- **B. Create a failover replica instance in a different region**
- C. Create a read replica instance in the same region, but in a different zone
- D. Create a failover replica instance in the same region, but in a different zone

答案： B

解題說明：

Explanation

問題 #68

For this question, refer to the TerramEarth case study

You analyzed TerramEarth's business requirement to reduce downtime, and found that they can achieve a majority of time saving by reducing customers' wait time for parts. You decided to focus on reduction of the 3 weeks aggregate reporting time. Which modifications to the company's processes should you recommend?

- A. Migrate from FTP to streaming transport, migrate from CSV to binary format, and develop machine learning analysis of metrics.
- B. Migrate from FTP to SFTP transport, develop machine learning analysis of metrics, and increase dealer local inventory by a fixed factor.
- C. Migrate from CSV to binary format, migrate from FTP to SFTP transport, and develop machine learning analysis of metrics.
- D. Increase fleet cellular connectivity to 80%, migrate from FTP to streaming transport, and develop machine learning analysis of metrics.

答案： A

問題 #69

.....

現在很多IT專業人士都一致認為Google Professional-Cloud-Architect 認證考試的證書就是登上IT行業頂峰的第一塊墊腳石。因此Google Professional-Cloud-Architect認證考試是一個很多IT專業人士關注的考試。
