The results of your C_SIGDA_2403 Exam will be analyzed and a statistics will be presented to you. So you can see how you have done and know which kinds of questions of the C_SIGDA_2403 exam are to be learned more.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q61-Q66):

NEW QUESTION # 61

Why does extracted data typically need to be transformed?Note: There are 2correct answers to this question.

- A. To create a log file that includes all events
- B. To ensure all extracted data is correct
- C. To uniform and standardize the extracted data
- D. To visualize dependencies between cases

Answer: B,C

Explanation:

The transformation of extracted data is a critical step in process mining and analysis, primarily to ensure uniformity and accuracy. Uniforming and standardizing the extracted data is necessary to facilitate its analysis across different systems and processes, ensuring consistency in metrics and interpretations. Ensuring the correctness of all extracted data is also crucial to maintain the integrity of the analysis, as any inaccuracies can lead to flawed insights and decisions. Visualizing dependencies between cases and creating a log file with all events, while important, do not directly relate to the reasons why extracted data typically needs to be transformed.References:SAP Signavio Process Intelligence Documentation

NEW QUESTION # 62

What are the different decision types when using an Exclusive Gateway in SAP Signavio Process Governance?Note: There are 2 correct answ-ers to this que-stion.
