After years of hard work, our 3V0-21.23 learning materials can take the leading position in the market. Our highly efficient operating system for learning materials has won the praise of many customers. If you are determined to purchase our 3V0-21.23 learning materials, we can assure you that you can receive an email from our efficient system within 5 to 10 minutes after your payment, which means that you do not need to wait a long time to experience our learning materials. Then you can start learning our 3V0-21.23 Learning Materials in preparation for the exam.

VMware vSphere 8.x Advanced Design Sample Questions (Q42-Q47):

NEW QUESTION # 42

An architect is assigned to report available capacity of a vSphere platform and is provided with the following:

- Read-only access to the platform's virtualization monitoring tool
- Full access to an internally developed and manually updated Configuration Management Database (CMDB) tool
- Access to a document repository containing the go-live design documentation for each application
- Links to vendor best practice documentation for many of the deployed applications
- Access to the company wide in-guest monitoring tool

Information extracted from which two sources will accurately provide the required information? (Choose two.)

- A. Application vendor best practice documentation
- B. Application virtual machine design documents
- C. Virtualization monitoring tools
- D. Support organizations Configuration Management Database (CMDB)
- E. In-guest monitoring tools

Answer: C,E

NEW QUESTION # 43

An architect is designing the access management component of a vSphere-based solution. During a requirements gathering workshop, the customer states that the architecture must use a centralized user authentication solution.

The architect decides that an Open Lightweight Directory Access Protocol (OpenLDAP) solution would meet the requirement. The security team intervenes and requires that the solution use the corporate Active Directory Domain Services solution.

At which point did the architect's design become constrained?

- A. When the architect finished documenting all of the requirements.
- B. When the architect made the design decision to use an OpenLDAP solution for user authentication.
- C. When the customer required the use of the corporate Active Directory Domain Services solution.
- D. When the customer provided the requirement for the use a centralized user authentication solution.

Answer: C

Explanation:

The design became constrained when the customer required the use of the corporate Active Directory Domain Services (AD DS) solution. The security team's intervention and insistence on using the corporate Active Directory effectively limited the options available for the authentication solution, as OpenLDAP was no longer a valid choice. At this point, the solution's scope was restricted to ensure compatibility with the customer's existing Active Directory infrastructure, which imposed a specific requirement on the design.

NEW QUESTION # 44

There is a request for approved virtual machine applications through a new vSphere platform's integrated automation portal. The platform was built following all provided company security guidelines and has been assessed against Sarbanes-Oxley Act of 2002 (SOX) regulations.

The platform has the following characteristics:

- vRealize Operations is being used to monitor all clusters.
- There is a dedicated ESXi cluster, supporting all management services.
- All network traffic is via distributed virtual switches (DVS).
- There is a dedicated ESXi cluster for all line-of-business applications.
- Network traffic is serviced by NSX-T.
- There is a dedicated ESXi cluster for virtual desktop infrastructure (VDI).
- Network traffic is serviced by NSX-T.

The application owner is requesting approval to install a new service that must be protected as per the Payment Card Industry (PCI) Data Security Standard.

Which additional non-functional requirement should the architect include in the design to support the new service?

- A. The vSphere hosting platform and all PCI application virtual machines must be assessed for SOX compliance.
- B. The vSphere hosting platform and all PCI application virtual machine network traffic must be routed via NSX-T.

- C. The vSphere hosting platform and all PCI application virtual machines must be monitored using the vRealize Operations Compliance Pack for Payment Card Industry.
- D. The vSphere hosting platform and all PCI application virtual machines must be assessed against Payment Card Industry (PCI) Data Security Standard compliance.

Answer: C

NEW QUESTION # 45

What do capacity requirements for a vSphere design help determine?

- A. The storage and compute resources needed for the vSphere environment.
- B. The number of system administrators needed to manage the vSphere environment.
- C. The network bandwidth and data transfer speeds.
- D. The expected maximum load the vSphere system can handle.

Answer: D

NEW QUESTION # 46

During a requirements gathering workshop, the customer's Chief Information Security Office (CISO) provides the following requirements that are pertinent to the design of a new vSphere environment:

- All operating system critical patches must be installed within 24 hours of release.
- All virtual machine templates must be updated every three months in line with company policy.

Which requirement classification is being gathered for the design documentation?

- A. Availability
- B. Security
- C. Manageability
- D. Recoverability

Answer: C
