When you first contact our software, different people will have different problems. Maybe you are not comfortable with our 312-38 exam question and want to know more about our products and operations. As long as you have questions, you can send e-mail to us, we have online staff responsible for ensuring 24-hour service to help you solve all the problems about our 312-38 Test Prep. After you purchase our 312-38 quiz guide, we will still provide you with considerate services. Maybe you will ask whether we will charge additional service fees.

The EC-Council Certified Network Defender CND certification exam is a rigorous, multi-stage process that assesses the candidate's understanding of network defense principles, techniques, and best practices. 312-38 exam consists of a combination of multiple-choice, simulated real-world scenarios, and essay questions. Candidates who pass the exam receive a certificate of completion that demonstrates their proficiency in network defense and their commitment to maintaining a high level of professionalism in the field of cybersecurity.

EC-COUNCIL 312-38 Certification Exam is designed to test the candidate's knowledge and skills in network security. 312-38 exam consists of 100 multiple-choice questions that must be answered within a three-hour time frame. 312-38 exam covers a broad range of topics related to network security, including network protocols, network security controls, and network defense technologies.

Reasonable 312-38 Exam Price & Test 312-38 Questions Answers

Once you accept the guidance of our 312-38 training engine, you will soon master all knowledge about the real exam. Because there are all the keypoints of the subject in our 312-38 training guide. All in all, you will save a lot of preparation troubles of the 312-38 Exam with the help of our study materials. We will go on struggling and developing new versions of the 312-38 study materials. Please pay close attention to our products!

EC-COUNCIL EC-Council Certified Network Defender CND Sample Questions (Q331-Q336):

NEW QUESTION # 331

Arman transferred some money to his friend's account using a net banking service. After a few hours, his friend informed him that he hadn't received the money yet. Arman logged on to the bank's website to investigate and discovered that the amount had been transferred to an unknown account instead. The bank, upon receiving Arman's complaint, discovered that someone had established a station between Arman's and the bank server's communication system. The station intercepted the communication and inserted another account number replacing his friend's account number. What is such an attack called?

- A. DNS Cache Poisoning
- B. DNS Poisoning
- C. Privilege Escalation
- **D. Man-in-the-Middle Attack**

Answer: D

Explanation:

The scenario described is a classic example of a Man-in-the-Middle (MitM) attack. In this type of cyberattack, the attacker secretly intercepts and possibly alters the communication between two parties who believe they are directly communicating with each other. The attacker has inserted themselves between the two parties, in this case, Arman and the bank's server, and has intercepted the communication to redirect the funds to a different account. This type of attack can occur in various forms, such as eavesdropping on or altering the communication over an insecure network service, but it is characterized by the attacker's ability to intercept and modify the data being exchanged without either legitimate party noticing.

NEW QUESTION # 332

To secure his company's network, Tim the network admin, installed a security device that inspected all inbound and outbound network traffic for suspicious patterns. The device was configured to alert him if it found any such suspicious activity. Identify the type of network security device installed by Tim?

- **A. Intrusion Detection System (IDS)**
- B. Honeypot
- C. Firewall
- D. Proxy server

Answer: A

Explanation:

The network security device described is an Intrusion Detection System (IDS). An IDS monitors all inbound and outbound network traffic for suspicious patterns and is configured to alert the network administrator if it detects any such activity. This aligns with the primary function of an IDS, which is to serve as a monitoring system, not necessarily to block traffic like a firewall or act as a decoy like a honeypot. It differs from a proxy server, which would primarily manage and forward web requests on behalf of clients. The IDS operates by analyzing traffic and identifying potential threats based on known signatures or anomalies in network behavior, thereby enabling the network admin to take appropriate action to secure the network¹².

NEW QUESTION # 333

Which among the following filter is used to detect a SYN/FIN attack?

- A. `tcp.flags==0x004`
- B. `tcp.flags==0x001`
- **C. `tcp.flags==0x003`**
- D. `tcp.flags==0x002`

Answer: C

Explanation:

The filter `tcp.flags==0x003` is used to detect SYN/FIN attacks. This filter is designed to identify packets where both the SYN and FIN flags are set, which is an unusual combination and indicative of a potential SYN/FIN attack. In a typical TCP communication, a SYN flag is used to initiate a connection, and a FIN flag is used to gracefully close a connection. Therefore, seeing both flags set in a single packet suggests a malformed or malicious packet, which is characteristic of a SYN/FIN attack.

References: The use of the filter `tcp.flags==0x003` for detecting SYN/FIN attacks is discussed in various cybersecurity resources and aligns with the knowledge required for the Certified Network Defender (CND) certification. This specific filter is mentioned in discussions about network security and intrusion detection techniques¹.

NEW QUESTION # 334

In _____ mechanism, the system or application sends log records either on the local disk or over the network.

- A. Network-based

- B. Pull-based
- C. Host-based
- **D. Push-based**

Answer: D

Explanation:

In a push-based mechanism, the system or application actively sends log records to a designated storage location, which can be on the local disk or over the network. This is in contrast to a pull-based mechanism, where the log records are retrieved by a separate process. The push-based approach ensures that log records are sent immediately and consistently, which is crucial for real-time monitoring and analysis.

NEW QUESTION # 335

Which of the following is the full form of SAINT?

- A. Security Admin Integrated Network Tool
- B. System Admin Integrated Network Tool
- C. System Automated Integrated Network Tool
- **D. System Administrators Integrated Network Tool**

Answer: D

Explanation:

Explanation

NEW QUESTION # 336

.....

If you cannot fully believe our 312-38 exam prep, you can refer to the real comments from our customers on our official website before making a decision. There are some real feelings after they have bought our study materials. Almost all of our customers have highly praised our 312-38 exam guide because they have successfully obtained the certificate. Generally, they are very satisfied with our 312-38 Exam Torrent. Also, some people will write good review guidance for reference. Maybe it is useful for your preparation of the 312-38 exam. In addition, you also can think carefully which kind of study materials suit you best. If someone leaves their phone number or email address in the comments area, you can contact them directly to get some useful suggestions.
