

# VMware 2V0-15.25 Exam | 2V0-15.25 Valid Test Experience - Instant Download of 2V0-15.25 Latest Exam Pattern

2026 Latest Exams 4sures 2V0-15.25 PDF Dumps and 2V0-15.25 Exam Engine Free Share: <https://drive.google.com/open?id=1N99Wv5qu1ZxamFMXPIIQ9Dc5d6lSoUW5>

For the 2V0-15.25 learning materials of our company, with the skilled experts to put the latest information of the exam together, the test dumps is of high quality. We have the reliable channels to ensure that the 2V0-15.25 Learning Materials you receive are the latest on. We also have the professionals to make sure the answers and questions are right. Therefore just using the 2V0-15.25 at ease, you won't regret for this.

## VMware 2V0-15.25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Install, Configure, Adminstrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>• Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li></ul>

## High Pass-Rate 2V0-15.25 Valid Test Experience - Easy and Guaranteed 2V0-15.25 Exam Success

The language of our 2V0-15.25 study torrent is easy to be understood and the content has simplified the important information. Our

product boosts the function to simulate the exam, the timing function and the self-learning and the self-assessment functions to make the learners master the 2V0-15.25 guide torrent easily and in a convenient way. Based on the plenty advantages of our product, you have little possibility to fail in the exam. We guarantee to you that we provide the best 2V0-15.25 study torrent to you and you can pass the exam with high possibility and also guarantee to you that if you fail in the exam unfortunately we will provide the fast and simple refund procedures.

## VMware Cloud Foundation 9.0 Support Sample Questions (Q15-Q20):

### NEW QUESTION # 15

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

\* The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.

\* VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Deploy a new VCF workload domain.
- B. Trigger an inventory synch in VCF Operations fleet management.
- C. Deploy an additional VCF workload domain cluster.
- D. Add the SDDC Manager integration for the VCF instance.

**Answer: D**

### NEW QUESTION # 16

An administrator configures a new VMware Cloud Foundation (VCF) instance in a remote site using a vSAN Express Storage Architecture (ESA) for the workload domain cluster. vSAN ESA is configured with Auto- Policy Management and is designed to tolerate a single failure. The cluster experiences a hardware failure and on investigation, the administrator discovers that the affected objects did not re-protect and remain in a "Reduced availability with no rebuild" state.

How can the administrator explain why the vSAN objects did not rebuild as expected?

- A. The storage devices are not certified for vSAN.
- B. The existing disk groups need to be expanded to support additional capacity.
- C. The number of ESX hosts doesn't support rebuilds during an outage.
- D. The storage policy needs to be modified to support forced provisioning.

**Answer: C**

Explanation:

In VMware Cloud Foundation 9.0, using vSAN Express Storage Architecture (ESA) with Auto-Policy Management, the system automatically selects the correct storage policy based on the cluster size and desired failure protection. When the administrator configures tolerance for a single failure (FTT=1 using RAID-1 mirroring), vSAN ESA requires sufficient remaining hosts during a failure event to reprotect objects.

A minimum of 3 ESA-capable hosts is required for RAID-1, and re-protection after a failure requires enough hosts with available capacity to place new replica components. In small ESA clusters (e.g., 3 or 4 nodes), if one host fails, the remaining hosts may not meet the placement rules for automatic rebuild to restore compliance. ESA enforces strict placement rules to maintain consistent performance and resilience; if vSAN determines that object layout compliance cannot be restored without violating these rules, it enters Reduced availability with no rebuild state.

This behavior is expected and documented: rebuilds cannot occur if the cluster does not have sufficient hosts or free capacity to recreate absent components. The administrator's ESA configuration behaved correctly given the cluster size limitation, making B the correct answer.

### NEW QUESTION # 17

An administrator recently deployed a new three-node VMware vSAN Express Storage Architecture (ESA) cluster to an existing workload domain. After creating a number of Virtual Machines (VMs), the administrator discovers that storage is being consumed a

lot quicker than expected.

While investigating the issue, the administrator discovers that the datastore default policy has been set to RAID-1 by Auto-Policy Management rather than the expected RAID-5.

What is a possible cause?

- A. The vSAN storage policy has Force Provisioning enabled.
- **B. The vSAN ESA cluster must have a minimum of four hosts.**
- C. The vSAN ESA cluster has Host Rebuild Reserved enabled.
- D. The RAID-5 policy is only supported on a vSAN ESA storage cluster.

**Answer: B**

Explanation:

In vSAN Express Storage Architecture (ESA), Auto-Policy Management determines which default storage policies can be used based on the number of hosts in the cluster. RAID-5 and RAID-6 policies require a minimum number of hosts to satisfy fault domain and component placement rules.

For vSAN ESA, the minimum hosts required are:

\* RAID-1 (FTT=1) # minimum 3 hosts

\* RAID-5 (FTT=1) # minimum 4 hosts

\* RAID-6 (FTT=2) # minimum 6 hosts

In this scenario, the administrator deployed a three-host ESA cluster. Since RAID-5 requires at least four ESA-capable hosts, vSAN Auto-Policy Management automatically falls back to RAID-1, the highest level of resilience possible with the available cluster size.

This results in significantly higher storage consumption, which matches exactly what the administrator observed.

Option A is incorrect because RAID-5 is fully supported on ESA-but only with enough hosts.

Option C (Force Provisioning) does not change the default policy selected.

Option D (Host Rebuild Reserve) does not control RAID policy selection.

#### NEW QUESTION # 18

An administrator attempts to add a new user (provideradmin05) within the VMware Cloud Foundation (VCF) Automation Provider Management Portal, however provideradmin05 cannot be found for import.

The following information is provided:

\* The existing VCF Fleet uses VMware Identity Broker (VIDB) for single sign-on.

\* VIDB uses Active Directory as the identity provider.

\* A group named VCFA\_ProviderAdmins was created in Active Directory, populated with the appropriate user accounts and synchronized with VIDB.

\* Five days later provideradmin05 was added to VCFA\_ProviderAdmins.

What will resolve this issue?

- **A. In VCF Operations, manually resync the directory.**
- B. In the VCF Automation Provider Management Portal, import provideradmin05 as an LDAP user.
- C. In VCF Operations, disable VCF SSO for VCF Automation.
- D. In the VCF Automation Provider Management Portal, enable the Advanced Rights Bundle Mode.

**Answer: A**

Explanation:

VMware Cloud Foundation (VCF) 9.x uses VMware Identity Broker (VIDB) as the central identity provider for the entire VCF fleet. VIDB synchronizes user and group metadata from the connected enterprise identity source, in this case Active Directory. When a user is added to an AD group after the group was already synced into VIDB, VIDB does not automatically resync group membership on demand unless a directory synchronization is performed.

In this scenario, the group VCFA\_ProviderAdmins was synchronized five days earlier. When the new user provideradmin05 was later added to the AD group, VIDB-and therefore the VCF Automation Provider Management Portal-does not recognize that new user until a manual directory resynchronization occurs from VCF Operations.

This operation forces VIDB to:

\* Requery Active Directory

\* Update group membership information

\* Repopulate available users for import into VCF Automation

Options B and D are incorrect because they do not influence Identity Broker directory synchronization. Option C (disable VCF SSO) would break authentication and is not a valid solution.

### NEW QUESTION # 19

An administrator has received reports of high CPU ready times on several Virtual Machines (VMs) running within a VMware Cloud Foundation (VCF) with error "Failed to scan the image. The scan specification (scan\_spec) is invalid." What is the cause of this error?

- A. A component was removed from the image.
- B. A device driver is incompatible with the included firmware.
- C. The cluster was not assigned a default image.
- D. A vendor add-on was not provided in the image.

**Answer: A**

Explanation:

The error message com.vmware.esx.settings.daemon.software.scan\_spec (reconstructed from the type settings\_daemon.software.scan\_spec) is a specific failure generated by the vSphere Lifecycle Manager (vLCM) compliance engine on the ESXi host.

\* Cause - Removed Component: This error is a documented known issue in vSphere 8.x/VCF 5.x+, specifically occurring when an administrator has removed a component from the Cluster Image that the system validates as "required" or "structural" for the host's hardware configuration (common with hosts using DPUs or specific OEM add-ons).

\* The Scenario: The mention of "High CPU ready times" likely implies the administrator attempted to streamline the host image by removing a perceived "bloatware" component (like a vendor monitoring agent or unused driver) to improve performance.

\* The Result: When vLCM attempts to build the "Scan Specification" (scan\_spec) to validate the host against this modified image, the internal struct validation fails because the removed component creates an invalid dependency state, throwing the Invalid field software\_spec... or scan\_spec exception.

### NEW QUESTION # 20

.....

Decades of painstaking efforts have put us in the leading position of 2V0-15.25 training materials compiling market, and the excellent quality of our 2V0-15.25 guide torrent and high class operation system in our company have won the common recognition from many international customers for us. With the high class operation system, we can assure you that you can start to prepare for the 2V0-15.25 Exam with our study materials only 5 to 10 minutes after payment since our advanced operation system will send the 2V0-15.25 exam torrent to your email address automatically as soon as possible after payment.
