

100% Valid Google Professional-Cloud-Developer PDF Dumps and Professional-Cloud-Developer Exam Questions

P.S. Free & New Professional-Cloud-Developer dumps are available on Google Drive shared by TestsDumps:
<https://drive.google.com/open?id=1cVdrEw7dN6qT1qqy4poMRdFJ8BacjNTZ>

In accordance to the fast-pace changes of bank market, we follow the trend and provide the latest version of Professional-Cloud-Developer study materials to make sure you learn more knowledge. And since our Professional-Cloud-Developer training quiz appeared on the market, so our professional work team has years' of educational background and vocational training experience, thus our Professional-Cloud-Developer Preparation materials have good dependability, perfect function and strong practicability. So with so many advantages we can offer, why not get moving and have a try on our Professional-Cloud-Developer training materials?

Google Professional-Cloud-Developer Exam is a certification that is designed to validate the skills and knowledge of individuals who are looking to become a Google Certified Professional - Cloud Developer. Google Certified Professional - Cloud Developer certification is designed to test the ability of candidates to develop and deploy applications on Google Cloud using various programming languages and tools.

Reliable Google Professional-Cloud-Developer Test Objectives | Valid Professional-Cloud-Developer Exam Voucher

Professional-Cloud-Developer actual test not only are high-quality products, but also provided you with a high-quality service team.

Our TestsDumps platform is an authorized formal sales platform. Since the advent of Professional-Cloud-Developer prep torrent, our products have been recognized by thousands of consumers. Everyone in Professional-Cloud-Developer exam torrent ' team has gone through rigorous selection and training. We understand the importance of customer information for our customers. And we will strictly keep your purchase information confidential and there will be no information disclosure. At the same time, the content of Professional-Cloud-Developer Exam Torrent is safe and you can download and use it with complete confidence.

Google Certified Professional - Cloud Developer Sample Questions (Q384-Q389):

NEW QUESTION # 384

You are a SaaS provider deploying dedicated blogging software to customers in your Google Kubernetes Engine (GKE) cluster. You want to configure a secure multi-tenant platform to ensure that each customer has access to only their own blog and can't affect the workloads of other customers. What should you do?

- **A. Deploy a namespace per tenant and use Network Policies in each blog deployment.**
- B. Enable Application-layer Secrets on the GKE cluster to protect the cluster.
- C. Use GKE Audit Logging to identify malicious containers and delete them on discovery.
- D. Build a custom image of the blogging software and use Binary Authorization to prevent untrusted image deployments.

Answer: A

Explanation:

<https://cloud.google.com/kubernetes-engine/docs/concepts/multitenancy-overview>

NEW QUESTION # 385

Your API backend is running on multiple cloud providers. You want to generate reports for the network latency of your API. Which two steps should you take? (Choose two.)

- A. Use Stackdriver Debugger to generate report.
- B. Use Zipkin collector to gather data.
- **C. Use Stackdriver Profiler to generate report.**
- D. Use Fluentd agent to gather data.
- **E. Use Stackdriver Trace to generate reports.**

Answer: C,E

NEW QUESTION # 386

Your application is running on Compute Engine and is showing sustained failures for a small number of requests. You have narrowed the cause down to a single Compute Engine instance, but the instance is unresponsive to SSH. What should you do next?

- **A. Enable and check the serial port output.**
- B. Delete the machine and create a new one.
- C. Reboot the machine.
- D. Take a snapshot of the disk and attach it to a new machine.

Answer: A

Explanation:

https://cloud.google.com/compute/docs/troubleshooting/troubleshooting-ssh#debug_with_serial_console

NEW QUESTION # 387

You manage an application that runs in a Compute Engine instance. You also have multiple backend services executing in stand-alone Docker containers running in Compute Engine instances. The Compute Engine instances supporting the backend services are scaled by managed instance groups in multiple regions. You want your calling application to be loosely coupled. You need to be able to invoke distinct service implementations that are chosen based on the value of an HTTP header found in the request. Which

Google Cloud feature should you use to invoke the backend services?

- A. Anthos Service Mesh
- B. Internal HTTP(S) Load Balancing
- C. Service Directory
- **D. Traffic Director**

Answer: D

Explanation:

https://cloud.google.com/traffic-director/docs/overview#traffic_management Advanced traffic management, including routing and request manipulation (based on hostname, path, headers, cookies, and more), enables you to determine how traffic flows between your services. You can also apply actions like retries, redirects, and weight-based traffic splitting for canary deployments. Advanced patterns like fault injection, traffic mirroring, and outlier detection enable DevOps use cases that improve your resiliency.

NEW QUESTION # 388

You recently migrated an on-premises monolithic application to a microservices application on Google Kubernetes Engine (GKE). The application has dependencies on backend services on-premises, including a CRM system and a MySQL database that contains personally identifiable information (PII). The backend services must remain on-premises to meet regulatory requirements. You established a Cloud VPN connection between your on-premises data center and Google Cloud. You notice that some requests from your microservices application on GKE to the backend services are failing due to latency issues caused by fluctuating bandwidth, which is causing the application to crash. How should you address the latency issues?

- **A. Increase the number of Cloud VPN tunnels for the connection between Google Cloud and the on-premises services**
- B. Decrease the network layer packet size by decreasing the Maximum Transmission Unit (MTU) value from its default value on Cloud VPN
- C. Use Memorystore to cache frequently accessed PII data from the on-premises MySQL database
- D. Use Istio to create a service mesh that includes the microservices on GKE and the on-premises services

Answer: A

Explanation:

<https://cloud.google.com/network-connectivity/docs/vpn/concepts/topologies#more-bandwidth> To increase the bandwidth of your HA VPN gateways, add more HA VPN tunnels.

NEW QUESTION # 389

.....

If you don't have enough time to study for your Google Professional-Cloud-Developer exam, TestsDumps provides Google Professional-Cloud-Developer Pdf questions. You may quickly download Google Professional-Cloud-Developer exam questions in PDF format on your smartphone, tablet, or desktop. You can Print Google Professional-Cloud-Developer PDF Questions and answers on paper and make them portable so you can study on your own time and carry them wherever you go.
