P.S. Free 2026 Salesforce Analytics-Arch-201 dumps are available on Google Drive shared by Test4Cram: [https://drive.google.com/open?id=177kkAPhf2fineRNxC1oGCp95LG\\_\\_Zbvq](https://drive.google.com/open?id=177kkAPhf2fineRNxC1oGCp95LG__Zbvq)

Test4Cram offers Salesforce Analytics-Arch-201 exam dumps that every candidate can rely on to get success on the first take. The registration fee for the Analytics-Arch-201 real certification test is considerably expensive. That is why a Test4Cram has launched a budget-friendly Salesforce Analytics-Arch-201 updated study material compared to other brands in the market. We also save you money with up to 1 year of free Salesforce Analytics-Arch-201 Exam Questions updates. For customer satisfaction, a free demo version of the Salesforce Certified Tableau Architect (Analytics-Arch-201) exam product is also available so that users may check its authenticity before even buying it. Don't miss this opportunity of buying an updated and affordable Salesforce Certified Tableau Architect (Analytics-Arch-201) exam product.

## Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li></ul>

Topic 2	<ul style="list-style-type: none"> <li>• <b>Design a Tableau Infrastructure:</b> This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Monitor and Maintain a Tableau Deployment:</b> This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li> </ul>

## Vce Analytics-Arch-201 Torrent & Analytics-Arch-201 Simulation Questions

Do you want to get more respects from other people? Do you long to become a powerful people? Our Analytics-Arch-201 exam torrent is compiled by professional experts that keep pace with contemporary talent development and makes every learner fit in the needs of the society. If you choose our Analytics-Arch-201 Study Materials, you will pass Analytics-Arch-201 exam successful in a short time. There is no doubt that our Analytics-Arch-201 exam question can be your first choice for your relevant knowledge accumulation and ability enhancement.

### Salesforce Certified Tableau Architect Sample Questions (Q70-Q75):

#### NEW QUESTION # 70

A rapidly expanding retail company is planning to deploy Tableau for its nationwide operations. What is the most important factor to consider for ensuring the scalability of the Tableau deployment?

- **A. Choosing a deployment model that can scale with increasing data volume and user count**
- B. Using a single server regardless of increasing data and user requirements
- C. Limiting the number of users to control system load
- D. Focusing only on current data requirements without considering future growth

**Answer: A**

Explanation:

Choosing a deployment model that can scale with increasing data volume and user count This option ensures that as the company grows, the Tableau deployment can accommodate increasing data volumes and a higher number of users, which is crucial for a rapidly expanding business. Option A is incorrect because limiting the number of users can hinder operational efficiency and business growth. Option B is incorrect as it fails to consider future growth, which is essential for a scalable and future-proof deployment. Option D is incorrect because relying on a single server for an expanding operation can lead to performance issues and does not support scalability.

#### NEW QUESTION # 71

After configuring a reverse proxy for Tableau Server on a Windows system, users report that they are unable to access the Tableau Server. What is the first troubleshooting step?

- **A. Checking the reverse proxy configuration for correct forwarding rules and SSL termination settings**
- B. Upgrading the reverse proxy software to the latest version
- C. Reconfiguring Tableau Server to bypass the reverse proxy

- D. Increasing the memory allocation to Tableau Server to handle proxy traffic

**Answer: A**

Explanation:

Checking the reverse proxy configuration for correct forwarding rules and SSL termination settings When users are unable to access Tableau Server after setting up a reverse proxy, the first step should be to check the reverse proxy configuration. This includes verifying that the forwarding rules are correctly directing traffic to Tableau Server and that SSL termination (if used) is properly configured. Misconfigurations in these areas are common causes of accessibility issues in such setups. Option A is incorrect because bypassing the reverse proxy is not a solution to the problem and would negate the purpose of the proxy. Option C is incorrect as upgrading the proxy soft-ware, while potentially beneficial, is not the first step before checking the current configuration. Option D is incorrect because increasing memory allocation to Tableau Server does not address issues related to reverse proxy configurations.

#### NEW QUESTION # 72

When troubleshooting Kerberos authentication issues related to SPNs in Tableau Server, what common problem should be investigated first?

- A. Verifying that the SPNs are correctly set for the Tableau Server service account
- B. Ensuring that the network firewall allows Kerberos traffic to pass through
- C. Checking if the Kerberos tickets are expiring too quickly
- D. Confirming that all users have Kerberos enabled on their client machines

**Answer: A**

Explanation:

Verifying that the SPNs are correctly set for the Tableau Server service account A common issue in Kerberos authentication related to SPNs is incorrect or missing SPN configuration for the Tableau Server service account. The first step in troubleshooting should be to verify that the SPNs are correctly set and associated with the service account running Tableau Server. Incorrect SPN settings can prevent Kerberos from authenticating the server properly. Option A is incorrect because while ticket expiration is a factor in Kerberos, it is less likely to be the primary issue compared to incorrect SPN settings. Option C is incorrect as firewall settings, while important, are not the first aspect to check when SPN-related Kerberos issues are suspected. Option D is incorrect because the client machines having Kerberos enabled is less likely to be the root cause of SPN-related issues in Tableau Server.

#### NEW QUESTION # 73

In the context of interpreting Tableau Server installation logs, what is a key aspect to look for when diagnosing an installation failure?

- A. The number of users accessing the server during the installation
- B. User access levels and permissions at the time of installation
- C. Error codes or messages that indicate the specific nature of the installation failure
- D. Network bandwidth and latency during the installation process

**Answer: C**

Explanation:

Error codes or messages that indicate the specific nature of the installation failure When diagnosing an installation failure in Tableau Server, it is crucial to look for error codes or messages within the installation logs. These codes or messages can provide specific insights into what went wrong during the installation process, enabling targeted troubleshooting and resolution of the issue. Option A is incorrect because user access levels and permissions, while important, are not typically the primary focus when diagnosing an installation failure from the logs. Option B is incorrect as network bandwidth and latency are less likely to be detailed in installation logs and are not usually the primary causes of installation failures. Option D is incorrect because the number of users accessing the server during installation is unlikely to be a factor in installation failures and is not typically recorded in installation logs.

#### NEW QUESTION # 74

In configuring a Tableau Server deployment, you decide to assign a background process to a specific node. What is the primary reason for dedicating a node to the background process?

- A. To enable easier maintenance and updates of the background process without affecting other services
- B. To allow direct access to the database server from the background node
