

SAA-C03 Exam Online & Exam SAA-C03 Overview

P.S. Free & New SAA-C03 dumps are available on Google Drive shared by BraindumpsPass: https://drive.google.com/open?id=1x2VbWU8q_qBhmM5Fw2YqbLyK4jcabGHr

People who want to pass SAA-C03 exam also need to have a good command of the newest information about the coming SAA-C03 exam. However, it is not easy for a lot of people to learn more about the information about the study materials. Luckily, the SAA-C03 preparation materials from our company will help all people to have a good command of the newest information. Because our company have employed a lot of experts and professors to renew and update the SAA-C03 test training guide for all customer in order to provide all customers with the newest information.

Amazon SAA-C03 (Amazon AWS Certified Solutions Architect - Associate) exam is a certification exam designed to test the skills and knowledge of individuals who want to become an AWS Certified Solutions Architect. SAA-C03 exam is intended for individuals who have experience designing distributed systems on the AWS platform and have a deep understanding of AWS services and their integration with one another. Successful completion of SAA-C03 Exam demonstrates that a candidate has a deep understanding of AWS services and can design scalable, reliable, and cost-efficient solutions.

Exam SAA-C03 Overview | SAA-C03 Valid Learning Materials

This Amazon braindump study package contains SAA-C03 latest questions and answers from the real SAA-C03 exam. These questions and answers are verified by a team of professionals and the content of this SAA-C03 braindump is taken from the real exam. Since we are 100% sure of the content we provide a Money Back Guarantee offer! We believe that SAA-C03 Braindumps can help you pass your SAA-C03 exam with minimal effort.

To become certified, candidates must pass the SAA-C03 exam, which consists of 65 multiple-choice and multiple-response questions that must be completed within 130 minutes. SAA-C03 exam is computer-based and can be taken at a testing center or

remotely. The passing score for the exam is 720 out of 1000.

Amazon SAA-C03 exam tests a wide range of skills and knowledge related to AWS services, such as EC2, S3, RDS, VPC, Route 53, and many more. SAA-C03 Exam also evaluates the candidate's ability to design and deploy cost-effective solutions, security and compliance, and disaster recovery strategies. SAA-C03 exam consists of multiple-choice questions and is timed, with a total duration of 130 minutes. To pass the exam, the candidate must score at least 720 out of 1000 points.

Amazon AWS Certified Solutions Architect - Associate Sample Questions (Q257-Q262):

NEW QUESTION # 257

A company stores its data on premises. The amount of data is growing beyond the company's available capacity. The company wants to migrate its data from the on-premises location to an Amazon S3 bucket. The company needs a solution that will automatically validate the integrity of the data after the transfer. Which solution will meet these requirements?

- **A. Deploy an AWS DataSync agent on premises. Configure the DataSync agent to perform the online data transfer to an S3 bucket.**
- B. Configure an accelerator in Amazon S3 Transfer Acceleration on premises. Configure the accelerator to perform the online data transfer to an S3 bucket.
- C. Create an Amazon S3 File Gateway on premises. Configure the S3 File Gateway to perform the online data transfer to an S3 bucket.
- D. Order an AWS Snowball Edge device. Configure the Snowball Edge device to perform the online data transfer to an S3 bucket.

Answer: A

Explanation:

It allows the company to migrate its data from the on-premises location to an Amazon S3 bucket and automatically validate the integrity of the data after the transfer. By deploying an AWS DataSync agent on premises, the company can use a fully managed data transfer service that makes it easy to move large amounts of data to and from AWS. By configuring the DataSync agent to perform the online data transfer to an S3 bucket, the company can take advantage of DataSync's features, such as encryption, compression, bandwidth throttling, and data validation. DataSync automatically verifies data integrity at both source and destination after each transfer task. Reference:

Deploying an Agent for AWS DataSync

How AWS DataSync Works

NEW QUESTION # 258

A company has several web servers that need to frequently access a common Amazon RDS MySQL Multi-AZ DB instance. The company wants a secure method for the web servers to connect to the database while meeting a security requirement to rotate user credentials frequently.

Which solution meets these requirements?

- A. Store the database user credentials in files encrypted with AWS Key Management Service (AWS KMS) on the web server file system. The web server should be able to decrypt the files and access the database.
- **B. Store the database user credentials in AWS Secrets Manager. Grant the necessary IAM permissions to allow the web servers to access AWS Secrets Manager.**
- C. Store the database user credentials in AWS Systems Manager OpsCenter. Grant the necessary IAM permissions to allow the web servers to access OpsCenter.
- D. Store the database user credentials in a secure Amazon S3 bucket. Grant the necessary IAM permissions to allow the web servers to retrieve credentials and access the database.

Answer: B

Explanation:

Explanation

AWS Secrets Manager helps you protect secrets needed to access your applications, services, and IT resources. The service enables you to easily rotate, manage, and retrieve database credentials, API keys, and other secrets throughout their lifecycle.

<https://docs.aws.amazon.com/secretsmanager/latest/userguide/intro.html>

Secrets Manager enables you to replace hardcoded credentials in your code, including passwords, with an API call to Secrets

Manager to retrieve the secret programmatically. This helps ensure the secret can't be compromised by someone examining your code, because the secret no longer exists in the code. Also, you can configure Secrets Manager to automatically rotate the secret for you according to a specified schedule. This enables you to replace long-term secrets with short-term ones, significantly reducing the risk of compromise.

NEW QUESTION # 259

A company hosts an application used to upload files to an Amazon S3 bucket. Once uploaded, the files are processed to extract metadata which takes less than 5 seconds. The volume and frequency of the uploads varies from a few files each hour to hundreds of concurrent uploads. The company has asked a solutions architect to design a cost-effective architecture that will meet these requirements.

What should the solutions architect recommend?

- **A. Configure an object-created event notification within the S3 bucket to invoke an AWS Lambda function to process the files.**
- B. Configure AWS CloudTrail trails to log S3 API calls. Use AWS AppSync to process the files.
- C. Configure an Amazon Simple Notification Service (Amazon SNS) topic to process the files uploaded to Amazon S3. Invoke an AWS Lambda function to process the files.
- D. Configure Amazon Kinesis Data Streams to process and send data to Amazon S3. Invoke an AWS Lambda function to process the files.

Answer: A

Explanation:

This option is the most cost-effective and scalable way to process the files uploaded to S3. AWS CloudTrail is used to log API calls, not to trigger actions based on them. AWS AppSync is a service for building GraphQL APIs, not for processing files. Amazon Kinesis Data Streams is used to ingest and process streaming data, not to send data to S3. Amazon SNS is a pub/sub service that can be used to notify subscribers of events, not to process files. Reference:

NEW QUESTION # 260

A company has a financial application that produces reports. The reports average 50 KB in size and are stored in Amazon S3. The reports are frequently accessed during the first week after production and must be stored for several years. The reports must be retrievable within 6 hours.

Which solution meets these requirements MOST cost-effectively?

- A. Use S3 Standard. Use an S3 Lifecycle rule to transition the reports to S3 Standard-Infrequent Access (S3 Standard-IA) after 7 days.
- **B. Use S3 Standard. Use an S3 Lifecycle rule to transition the reports to S3 Glacier after 7 days.**
- C. Use S3 Intelligent-Tiering. Configure S3 Intelligent-Tiering to transition the reports to S3 Standard-Infrequent Access (S3 Standard-IA) and S3 Glacier.
- D. Use S3 Standard. Use an S3 Lifecycle rule to transition the reports to S3 Glacier Deep Archive after 7 days.

Answer: B

Explanation:

To store and retrieve reports that are frequently accessed during the first week and must be stored for several years, S3 Standard and S3 Glacier are suitable solutions. S3 Standard offers high durability, availability, and performance for frequently accessed data. S3 Glacier offers secure and durable storage for long-term data archiving at a low cost. S3 Lifecycle rules can be used to transition the reports from S3 Standard to S3 Glacier after 7 days, which can reduce storage costs. S3 Glacier also supports retrieval within 6 hours.

NEW QUESTION # 261

A recent analysis of a company's IT expenses highlights the need to reduce backup costs. The company's chief information officer wants to simplify the on-premises backup infrastructure and reduce costs by eliminating the use of physical backup tapes. The company must preserve the existing investment in the on-premises backup applications and workflows. What should a solutions architect recommend?

- A. Set up AWS Storage Gateway to connect with the backup applications using the NFS interface.
- B. Set up an Amazon EFS file system that connects with the backup applications using the iSCSI interface.
- C. Set up AWS Storage Gateway to connect with the backup applications using the iSCSI-virtual tape library (VTL) interface.
- D. Set up an Amazon EFS file system that connects with the backup applications using the NFS interface.

Answer: C

Explanation:

it allows the company to simplify the on-premises backup infrastructure and reduce costs by eliminating the use of physical backup tapes. By setting up AWS Storage Gateway to connect with the backup applications using the iSCSI-virtual tape library (VTL) interface, the company can store backup data on virtual tapes in S3 or Glacier. This preserves the existing investment in the on-premises backup applications and workflows while leveraging AWS storage services. References:
