BTW, DOWNLOAD part of Dumps4PDF IDP dumps from Cloud Storage: https://drive.google.com/open?id=1_IZyhElgjDpmMmBN7lbqxCCx_ASXkOe

They put all their efforts to maintain the top standard of CrowdStrike IDP exam questions all the time. So you rest assured that with CrowdStrike IDP exam dumps you will get everything thing that is mandatory to learn, prepare and pass the difficult CrowdStrike IDP Exam with good scores. Take the best decision of your career and just enroll in the CrowdStrike IDP certification exam and start preparation with CrowdStrike IDP practice questions without wasting further time.

Students often feel helpless when purchasing test materials, because most of the test materials cannot be read in advance, students often buy some products that sell well but are actually not suitable for them. But if you choose IDP practice test, you will certainly not encounter similar problems. All the materials in IDP Exam Torrent can be learned online or offline. You can use your mobile phone, computer or print it out for review. With IDP practice test, if you are an office worker, you can study on commute to work, while waiting for customers, and for short breaks after work.

IDP Top Questions | Valid IDP Test Practice

The IDP learning materials are of high quality, mainly reflected in the adoption rate. As for our IDP exam question, we guaranteed a higher passing rate than that of other agency. More importantly, we will promptly update our IDP quiz torrent based on the progress of the letter and send it to you. 99% of people who use our IDP Quiz torrent has passed the exam and successfully obtained their

certificates, which undoubtedly show that the passing rate of our IDP exam question is 99%. So our IDP study guide is a good choice for you.

CrowdStrike IDP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Falcon Identity Protection Fundamentals: Introduces the four menu categories (monitor, enforce, explore, configure), subscription differences between ITD and ITP, user roles, permissions, and threat mitigation capabilities.
Topic 2	<ul style="list-style-type: none"> Risk Management with Policy Rules: Covers creating and managing policy rules and groups, triggers, conditions, enabling disabling rules, applying changes, and required Falcon roles.
Topic 3	<ul style="list-style-type: none"> Risk Assessment: Covers entity risk categorization, risk and event analysis dashboards, filtering, user risk reduction, custom insights versus reports, and export scheduling.
Topic 4	<ul style="list-style-type: none"> Configuration and Connectors: Addresses domain controller monitoring, subnet management, risk settings, MFA and IDaaS connectors, authentication traffic inspection, and country-based lists.
Topic 5	<ul style="list-style-type: none"> Threat Hunting and Investigation: Focuses on identity-based detections and incidents, investigation pivots, incident trees, detection evolution, filtering, managing exclusions and exceptions, and risk types.
Topic 6	<ul style="list-style-type: none"> User Assessment: Examines user attributes, differences between users endpoints entities, risk baselining, risky account types, elevated privileges, watchlists, and honeytoken accounts.
Topic 7	<ul style="list-style-type: none"> Falcon Fusion SOAR for Identity Protection: Explores SOAR workflow automation including triggers, conditions, actions, creating custom templated scheduled workflows, branching logic, and loops.
Topic 8	<ul style="list-style-type: none"> Multifactor Authentication (MFA) and Identity-as-a-service (IDaaS) Configuration Basics: Focuses on accessing and configuring MFA and IDaaS connectors, configuration fields, and enabling third-party MFA integration.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

The Enforce section of Identity Protection is used to:

- A. Configure domains, appliances, subnets, connectors, risk configuration, and settings
- B. View all identity-based detections and identity-based incidents in the environment
- C. Define policy rules that determine what actions to take in response to certain triggers observed in the environment
- D. Gain an overview of the domain and indicate whether the domain follows best security practice

Answer: C

Explanation:

The Enforce section of Falcon Identity Protection is dedicated to policy-based identity enforcement.

According to the CCIS curriculum, this section allows administrators to define and manage Policy Rules and Policy Groups that specify how the platform should respond when identity-related conditions are detected.

These rules evaluate triggers such as risky authentication behavior, privilege misuse, compromised credentials, or elevated risk scores, and then execute actions like blocking access, enforcing MFA, or initiating Falcon Fusion workflows. Enforce is therefore the execution layer of Falcon's identity security model.

The other options correspond to different sections of the platform:

Configuration tasks are handled in Configure.

Detections and incidents are reviewed in Monitor or Explore.

Domain posture overviews are displayed in Domain Security Overview.

Because Enforce directly controls what actions are taken in response to identity risk, Option B is the correct and verified answer.

NEW QUESTION # 48

To enforce conditional access policies with Identity Verification, an MFA connector can be configured for different authentication methods such as:

- A. Page
- B. Pull
- C. Alarm
- **D. Push**

Answer: D

Explanation:

Falcon Identity Protection integrates with third-party MFA providers through MFA connectors to support conditional access and identity verification. The CCIS documentation explains that these connectors allow organizations to enforce MFA challenges based on identity risk, authentication behavior, or policy conditions.

One of the supported MFA authentication methods is Push, where a notification is sent to a registered device or application for user approval. Push-based MFA is widely used due to its balance of usability and security and is fully supported by Falcon Identity Protection when integrated with compatible MFA providers.

The other options are not valid MFA authentication methods within Falcon:

* Page and Pull are not recognized MFA mechanisms.

* Alarm is related to alerting, not authentication.

By enabling push-based MFA through an MFA connector, organizations can dynamically enforce identity verification in alignment with Zero Trust principles. Therefore, Option B is the correct and verified answer.

NEW QUESTION # 49

When creating an API client, which scope with Write permissions must be enabled prior to using Identity Protection API?

- **A. Identity Protection GraphQL**
- B. Identity Protection Assessment
- C. Identity Protection Health
- D. There is no need for Write permissions in order to use IDP API

Answer: A

Explanation:

To interact with Falcon Identity Protection using GraphQL, the API client must be created with the appropriate permission scopes. According to the CCIS curriculum, the Identity Protection GraphQL scope with Write permissions must be enabled prior to using the Identity Protection API.

This scope allows the API client to execute GraphQL queries and mutations related to identity detections, incidents, users, and risk data. Even when performing read-only operations, CrowdStrike requires the GraphQL Write scope to authorize GraphQL query execution within the Falcon platform.

The other options are incorrect because:

* Identity Protection Assessment and Health are read-only data scopes.

* The statement that Write permissions are not required is explicitly false per CCIS documentation.

Because GraphQL access requires the Identity Protection GraphQL (Write) scope, Option D is the correct and verified answer.

NEW QUESTION # 50

Where in the Identity Protection module can one view the monitoring status of domain controllers?

- A. System Notifications
- B. Connectors
- C. Settings
- **D. Domains**

Answer: D

Explanation:

In Falcon Identity Protection, the Domains page is where administrators can view the monitoring and health status of domain controllers. The CCIS curriculum explains that this page provides visibility into which domain controllers are actively reporting authentication traffic, their inspection status, and whether Authentication Traffic Inspection (ATI) is enabled.

This view is essential for validating coverage and ensuring that Falcon Identity Protection has sufficient visibility into domain authentication activity. Administrators can quickly identify gaps, such as domain controllers that are not reporting or are misconfigured, and take corrective action.

The other options serve different purposes:

- * Settings manage general configuration.
- * System Notifications display alerts and messages.
- * Connectors manage integrations such as MFA and IDaaS.

Because domain controller visibility and monitoring health are managed at the domain level, Option C (Domains) is the correct and verified answer.

NEW QUESTION # 51

Which of the following would cause an identity-based incident type to change?

- A. An exclusion added to the incident
- B. A user linked detections to the incident in the console
- C. A user changed the incident type in the console
- **D. Detections related to the incident**

Answer: D

Explanation:

In Falcon Identity Protection, identity-based incidents are dynamic and can evolve over time as additional detections are associated with them. According to the CCIS curriculum, an incident's type is automatically recalculated based on the detections related to the incident, not by manual user actions.

As new identity-based detections are generated—such as credential misuse, lateral movement attempts, or abnormal authentication behavior—the platform continuously reassesses the incident. If the newly added detections indicate a different or more severe attack pattern, Falcon may automatically change the incident type to better reflect the observed threat activity.

Manual actions such as adding exclusions or linking detections do not directly change the incident type.

Similarly, users cannot manually override an incident's classification. The classification logic is driven entirely by Falcon's analytics engine to ensure consistent, objective threat categorization.

This automated behavior is emphasized in CCIS training to highlight Falcon's ability to adapt incident context as attacks progress, making Option D the correct answer.

NEW QUESTION # 52

.....

As you see, all of the three versions are helpful for you to get the IDP certification: the PDF, Software and APP online. So there is another choice for you to purchase the comprehensive version which contains all the three formats, it is the Value Pack. Besides, the price for the Value Pack is quite favorable. And no matter which format of IDP study engine you choose, we will give you 24/7 online service and one year's free updates on the IDP practice questions.
