NEW QUESTION # 101
A developer is asked to develop a new AppExchange application. A feature of the program creates Survey records when a Case reaches a certain stage and is of a certain Record Type. This feature needs to be configurable, as different Salesforce instances require Surveys at different times. Additionally, the out-of-the- box AppExchange app needs to come with a set of best practice settings that apply to most customers.
What should the developer use to store and package the custom configuration settings for the app?

- A. Process Builder
- B. Custom Settings
- C. Custom Metadata
- D. Custom Objects

Answer: C

NEW QUESTION # 102
A custom field Exec_Count_c of type Number is created on an Account object. An account record with value of "1" for a: Exec_Count_c is saved. A workflow field update is defined on the Exec_Count_c field, to increment its value every time an account record is created or updated. The following trigger is defined on the account: trigger ExecOrderTrigger on Account (before insert, before update, after insert, after update) { for (Account accountInstance: Trigger.New) { if (Trigger . isBefore) { accountInstance . Exec_Count_c +=l; System. debug (accountInstance . Exec_Count_c); } } } What is printed from the System.debug statement?
Output from System.debug in every iteration is separated with a delimiter.

- A. 2,2,3,3
- B. 2,2,4,4
- C. 1,2,3,4
- D. 1,2,3,3

Answer: B

NEW QUESTION # 103
What is the most efficient way in Visualforce to show information based on data filters defined by an end-user for a large volume of data?

- A. Use filter conditions in a SOQL query to limit data based on data filters.
- B. Use an Apex controller to refine raw data based on data filters and store the result in a static variable.

Salesforce Platform Developer II Sample Questions (Q110-Q115):

NEW QUESTION # 110
Which statement is true regarding savepoints?

- A. Savepoints are not limited by DML statement governor limits.
- B. Reference to savepoints can cross trigger invocations.
- C. Static variables are not reverted during a rollback.
- D. You can roll back to any savepoint variable created in any order.

Answer: C

Explanation:
When rolling back to a savepoint, any DML operations that occurred after that savepoint are undone, but static variables are not reverted. Therefore, when a rollback occurs, the state of all static variables at the time of the rollback remains the same as it was just before the rollback.

NEW QUESTION # 111
A developer is working on an integration between Salesforce and an external system. The integration requires sending a large amount of data to the external system, which can cause long response times and timeouts.
To optimize the performance and avoid timeouts, which technique should be used?

- A. Increase the timeout limit in the callout options,
- B. Implement an asynchronous callout using the Continuation class,
- C. Use a chained batch Apex to split the data into smaller batches.
- D. Use the @future annotation to make the callout asynchronous.

Answer: D

NEW QUESTION # 112
What is the <apex:actionSupport> tag used for in Visualforce pages?

- A. To trigger controller actions in response to DOM element events.
- B. To provide help and support content for buttons and links.
- C. To create a Javascript function that can trigger a controller action
- D. To trigger a second action when a button or link is clicked.

Answer: A

NEW QUESTION # 113

A developer gets an error saying 'Maximum Trigger Depth Exceeded.'
What is a possible reason to get this error message?

- A. There are numerous DML operations in the trigger logic.
- B. A flow trigger was included too many times.
- C. A trigger is recursively invoked more than 16 times.
- D. The SOQL governor limits are being hit.

Answer: C

Explanation:
The most likely reason to get the error message 'Maximum Trigger Depth Exceeded' is that a trigger is recursively invoked more than 16 times. This means that the trigger is causing an update on the same object that it is triggered on, which in turn fires the trigger again, creating an infinite loop. To avoid this, the developer should use a static variable or a collection to track the records that have already been processed by the trigger and prevent them from being updated again. The SOQL governor limits, the number of DML operations, and the inclusion of a flow trigger are not directly related to this error message, although they might also cause other performance issues or exceptions. NEW QUESTION # 114

A developer needs to add code to a Lightning web component's configuration file so the component only renders for a desktop size form factor when on a record page. What should the developer add to the component's record page target configuration to meet this requirement?

- A. <lightningLayout> </lightningLayout>
- B. <design> ...
- C. <supportedFormFactors> <supportedFormFactor type="Large"/> </supportedFormFactors>
- D. <property name="formFactor" value="Large"> ...

Answer: C

Explanation:
In a Lightning Web Component's configuration file (.js-meta.xml), the <supportedFormFactors> tag allows the developer to specify which device form factors the component supports. To restrict the component to only render on desktop devices, the developer must specify the type="Large".
The structure is:
XML
<targetConfigs>
<targetConfig targets="lightning__RecordPage">
<supportedFormFactors>
<supportedFormFactor type="Large"/>
</supportedFormFactors>
</targetConfig>
</targetConfigs>
If supportedFormFactors is not specified, the component defaults to supporting both Small (phone) and Large (desktop) form factors. Options B, C, and D are incorrect syntax for defining form factor support in LWC metadata.
