If you still have a trace of enterprise, you really want to start working hard! SPLK-2002 exam questions are the most effective helpers on your path. By using SPLK-2002 study engine, your abilities will improve and your mindset will change. Who does not want to be a positive person? This is all supported by strength! In any case, a lot of people have improved their strength through SPLK-2002 Exam simulating. They now have the opportunity they want. Whether to join the camp of the successful ones, purchase SPLK-2002 study engine, you decide for yourself!

Splunk is a leading provider of software solutions for monitoring, analyzing, and visualizing machine-generated data. The company offers a range of products and services designed to help organizations harness the power of their data to gain valuable insights and make informed business decisions. One of the key offerings from Splunk is the SPLK-2002 (Splunk Enterprise Certified Architect) Certification Exam.

The SPLK-2002 exam is intended for experienced Splunk professionals who have a deep understanding of the platform's architecture and components. SPLK-2002 exam covers a wide range of topics, including data ingestion, search processing, index management, distributed deployment, and security. Candidates must demonstrate their ability to design and implement complex Splunk environments, troubleshoot performance issues, and optimize search queries to support real-world use cases.

The SPLK-2002 Exam is a rigorous test that requires a deep understanding of Splunk Enterprise and its various components. Candidates are expected to be proficient in the use of Splunk Enterprise and have experience in designing and deploying Splunk environments. SPLK-2002 exam consists of 70 multiple-choice questions, and candidates have 2 hours to complete it. To pass the exam, candidates must score a minimum of 70%. Upon successful completion of the exam, candidates will receive the Splunk Enterprise Certified Architect certification, which is valid for 2 years. Splunk Enterprise Certified Architect certification is highly regarded in the industry and is a valuable asset for professionals seeking career advancement in the field of Splunk Enterprise.

## SPLK-2002 Test Collection & Valid SPLK-2002 Real Test

Nowadays there is a growing tendency in getting a certificate. SPLK-2002 study materials offer you an opportunity to get the certificate easily. SPLK-2002 exam dumps are edited by the experienced experts who are familiar with the dynamics of the exam center, therefore SPLK-2002 Study Materials of us are the essence for the exam. Besides we are pass guarantee and money back guarantee. Any other questions can contact us anytime.

## Splunk Enterprise Certified Architect Sample Questions (Q19-Q24):

### NEW QUESTION # 19

When using ingest-based licensing, what Splunk role requires the license manager to scale?

- A. Deployment clients
- **B. There are no roles that require the license manager to scale**
- C. Search peers
- D. Search heads

**Answer: B**

Explanation:

When using ingest-based licensing, there are no Splunk roles that require the license manager to scale, because the license manager does not need to handle any additional load or complexity. Ingest-based licensing is a new licensing model that allows customers to pay for the data they ingest into Splunk, regardless of the data source, volume, or use case. Ingest-based licensing simplifies the licensing process and eliminates the need for license pools, license stacks, license slaves, and license warnings. The license manager is still responsible for enforcing the license quota and generating license usage reports, but it does not need to communicate with any other Splunk instances or monitor their license usage. Therefore, option C is the correct answer. Option A is incorrect because search peers are indexers that participate in a distributed search.

They do not affect the license manager's scalability, because they do not report their license usage to the license manager. Option B is incorrect because search heads are Splunk instances that coordinate searches across multiple indexers. They do not affect the license manager's scalability, because they do not report their license usage to the license manager. Option D is incorrect because deployment clients are Splunk instances that receive configuration updates and apps from a deployment server. They do not affect the license manager's scalability, because they do not report their license usage to the license manager.

### NEW QUESTION # 20

Which Splunk Enterprise offering has its own license?

- A. Splunk Heavy Forwarder
- **B. Splunk Universal Forwarder**
- C. Splunk Forwarder Management
- D. Splunk Cloud Forwarder

**Answer: B**

### NEW QUESTION # 21

Which Splunk server role regulates the functioning of indexer cluster?

- **A. Master Node**
- B. Deployer
- C. Indexer
- D. Monitoring Console

**Answer: A**

### NEW QUESTION # 22

A customer has a four site indexer cluster. The customer has requirements to store five copies of searchable data, with one searchable copy of data at the origin site, and one searchable copy at the disaster recovery site (site4).

Which configuration meets these requirements?

- **A. site\_replication\_factor = origin:1, site4:1, total:5**
- B. site\_search\_factor = origin:2, site4:1, total:3
- C. site\_search\_factor = origin:1, site4:1, total:5
- D. site\_replication\_factor = origin:2, site4:1, total:3

**Answer: A**

Explanation:

The correct configuration to meet the customer's requirements is `site_replication_factor = origin:1, site4:1, total:5`. This means that each bucket will have one copy at the origin site, one copy at the disaster recovery site (site4), and three copies at any other sites. The total number of copies will be five, as required by the customer. The `site_replication_factor` determines how many copies of each bucket are stored across the sites in a multisite indexer cluster1. The `site_search_factor` determines how many copies of each bucket are searchable across the sites in a multisite indexer cluster2. Therefore, option B is the correct answer, and options A, C, and D are incorrect.

1: Configure the site replication factor 2: Configure the site search factor

### NEW QUESTION # 23

In search head clustering, which of the following methods can you use to transfer captaincy to a different member? (Select all that apply.)

- A. Use the Search Head Clustering settings menu from Splunk Web on any member.
- B. Run the `splunk transfer shcluster-captain` command from the member you would like to become the captain.
- C. Use the Monitoring Console.
- D. Run the `splunk transfer shcluster-captain` command from the current captain.

Answer: A,B

Explanation:

Explanation

In search head clustering, there are two methods to transfer captaincy to a different member. One method is to use the Search Head Clustering settings menu from Splunk Web on any member. This method allows the user to select a specific member to become the new captain, or to let Splunk choose the best candidate. The other method is to run the `splunk transfer shcluster-captain` command from the member that the user wants to become the new captain. This method requires the user to know the name of the target member and to have access to the CLI of that member. Using the Monitoring Console is not a method to transfer captaincy, because the Monitoring Console does not have the option to change the captain. Running the `splunk transfer shcluster-captain` command from the current captain is not a method to transfer captaincy, because this command will fail with an error message

### NEW QUESTION # 24

.....

This updated SPLK-2002 exam study material consists of SPLK-2002 PDF dumps, desktop practice exam software, and a web-based practice test. Experts have prepared the SPLK-2002 desktop-based exam simulation software. There are SPLK-2002 Actual Questions in the practice test to give you an exact impression of the Splunk SPLK-2002 original test.
