

# ActualtestPDF SolarWinds Observability-Self-Hosted-Fundamentals Dumps - Improve Your Exam Preparation Quickly

P.S. Free 2026 SolarWinds Observability-Self-Hosted-Fundamentals dumps are available on Google Drive shared by ActualtestPDF: <https://drive.google.com/open?id=1LzRjyNbbP9sJMrU0zurXu6wl63xNxcWJ>

Maybe you want to keep our Observability-Self-Hosted-Fundamentals exam guide available on your phone. Don't worry, as long as you have a browser on your device, our App version of our Observability-Self-Hosted-Fundamentals study materials will perfectly meet your need. That is to say that we can apply our App version on all kinds of electronic devices, such as IPAD, computer and so on. And this version of our Observability-Self-Hosted-Fundamentals Practice Engine can support a lot of systems, such as Windows, Mac, Android and so on.

Although it is difficult for you to prepare for Observability-Self-Hosted-Fundamentals exam, once you obtain the targeted exam certification, you will have a vast development prospect in IT industry. So what we can do is to help you not waste your efforts on the exam preparation. The Reliability and authority of Observability-Self-Hosted-Fundamentals Exam software on our ActualtestPDF has been recognized by majority of our customers, which will be found when you download our free demo. We will try our best to help you pass Observability-Self-Hosted-Fundamentals exam successfully.

## Unparalleled Observability-Self-Hosted-Fundamentals Guide - SolarWinds Observability Self-Hosted Fundamentals Guide

Our online version of Observability-Self-Hosted-Fundamentals learning guide does not restrict the use of the device. You can use the computer or you can use the mobile phone. You can choose the device you feel convenient at any time. Once you have used our Observability-Self-Hosted-Fundamentals exam training in a network environment, you no longer need an internet connection the next time you use it, and you can choose to use Observability-Self-Hosted-Fundamentals Exam Training at your own right. Our Observability-Self-Hosted-Fundamentals exam training do not limit the equipment, do not worry about the network, this will reduce you many learning obstacles, as long as you want to use Observability-Self-Hosted-Fundamentals test guide, you can enter the learning state.

## SolarWinds Observability-Self-Hosted-Fundamentals Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Customization and User Experience: This domain addresses platform customization through dashboards and views, managing user accounts and permissions, implementing custom properties, and organizing resources using groups.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• SolarWinds Platform Troubleshooting Tools: This domain covers troubleshooting tools including AppStack and PerfStack for correlating performance data, and Intelligent Mapping for visualizing network topology to identify and resolve issues.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• Node Management: This domain focuses on managing monitored nodes including handling node statuses and working with agents for monitoring and data collection from endpoints.</li></ul>

## SolarWinds Observability Self-Hosted Fundamentals Sample Questions (Q57-Q62):

### NEW QUESTION # 57

A group has been created to monitor a set of nodes. When additional nodes are added for monitoring, how can they be automatically placed in the group?

- A. create a custom property and dynamic query to add them to a group
- B. create a custom property and add nodes to a static group
- C. create a custom property and use an alert to add them
- D. create a custom property and add the nodes manually to a group

**Answer: A**

Explanation:

Automation is a cornerstone of efficient node management in the SolarWinds Platform. To avoid the manual labor of updating groups every time a new device is commissioned, the platform utilizes Dynamic Queries.

According to the SolarWinds Platform Administrator Guide, the best-practice workflow for automated grouping involves two steps. First, an administrator should create a custom property (e.g., City or ApplicationName). When new nodes are added via the "Add Node" wizard or Network Discovery, they are tagged with a specific value for that property. Second, the group's membership is defined by a dynamic query rather than a static list. For example, a group could be configured with a rule that states: "Add any node where City is equal to London".

Once this is configured, the platform's backend services periodically scan for any new nodes that match the criteria. As soon as a new server is added and its custom property is set, it is automatically added to the group without any further human intervention. This ensures that dashboards, alerts, and reports that rely on that group always reflect the current state of the infrastructure. Option D is incorrect because while alerts can trigger actions, they are not the standard architectural mechanism for group membership management.

### NEW QUESTION # 58

Alerts A and B were assigned the same trigger action through the action manager. What describes what happens when the action is modified while editing alert A's configuration?

- A. alert B is unaffected by modification
- B. trigger action is updated in manager
- C. modification is unable to be saved
- D. alert B is automatically updated

**Answer: B**

Explanation:

The SolarWinds Platform utilizes a centralized Action Manager to handle alert notifications and remediations efficiently. According to the SolarWinds Platform Alerting Guide, alert actions (such as sending an email, executing a script, or posting to a Slack channel) are often treated as reusable objects. When multiple alerts (Alert A and Alert B) share the same action from the Action Manager, they

are essentially pointing to a single configuration entry in the database.

If an administrator edits Alert A and modifies the parameters of that shared trigger action, the change is not isolated to just that alert's workflow. Instead, the trigger action is updated in the manager. Because Alert B is linked to that same action ID, it will immediately reflect the updated configuration the next time it triggers.

This behavior is designed to simplify administration; for example, if a primary on-call email address changes, an admin only needs to update the action once rather than editing every individual alert. However, it requires caution: if a user intended to change the action for Alert A only, they should instead "Copy" the action or create a new one to avoid inadvertently altering the behavior of Alert B and all other alerts sharing that centralized action.

#### NEW QUESTION # 59

CPU utilization is being monitored on a critical Windows server and is set to notify when utilization exceeds 90%. Notification parameters are set to disregard those brief spikes over 90% and focus on sustained periods above 90%. What should be configured to accomplish the notification goal?

- A. change polling method on the server from WMI to agent polling
- **B. set node to change CPU status if threshold is met for multiple polling cycles**
- C. change polling interval to match length of time for an alert to fire
- D. set node to inherit CPU thresholds and alert to fire when threshold is met

**Answer: B**

Explanation:

To prevent "alert noise" caused by temporary performance spikes, the SolarWinds Platform allows for threshold persistence. According to the SolarWinds Platform Administrator Guide, simply setting a threshold at 90% would trigger an alert the moment a single poll returns a high value.

The correct configuration to ensure only sustained high utilization triggers an action is to set the node to change CPU status if the threshold is met for multiple polling cycles. This is found in the "Edit Node" properties under the Thresholds section. For example, if the polling interval is 2 minutes and you set the condition to "10 minutes" (or 5 consecutive polls), the CPU status will only transition to Warning or Critical after the utilization has stayed above 90% for that entire duration. This filtering happens at the node/status level, ensuring that the alert engine only fires when there is a legitimate, sustained performance bottleneck rather than a transient spike caused by a routine background process.

#### NEW QUESTION # 60

A non-administrator user reports they are unable to create Intelligent Maps in the web console. What is the reason for the block?

- **A. user has not been given permission to add images**
- B. user has not been given the creator role in maps
- C. user has not been given the manage views permission
- D. user has not been given default set of user permissions

**Answer: A**

Explanation:

The ability to create and manage Intelligent Maps in the SolarWinds Platform is tied to a specific set of granular user permissions.

While a user may have general rights to view the console, creating a map involves placing entities onto a canvas and, frequently, utilizing background images or custom icons. According to the SolarWinds Platform documentation on Map Management, a critical prerequisite for full map creation functionality is the permission to add images (D).

In the user account settings under Settings > All Settings > Manage Accounts, there is a specific toggle for "Allow Map Management" or "Allow Editing." However, if the underlying platform permission for "Add Images" is not enabled, the user will find the map creation wizard restricted or non-functional. This is because Intelligent Maps rely on the platform's shared image library to store the metadata and visual components of the map. Without the right to write to this library (Add Images), the user is blocked from saving new map definitions to the database. This permission is often disabled by default for standard users to prevent the web server's storage from being filled with unauthorized or non-work-related image files.

#### NEW QUESTION # 61

Which two of the following customizations can be made on a report layout? (Choose two.)

- A. font of the report content
- B. width of the report
- C. position of page number
- D. logo on the report

**Answer: B,D**

Explanation:

The SolarWinds Platform web-based report builder provides specific layout options to ensure reports are professional and readable. According to the SolarWinds Platform Reporting Guide, customization of a report's visual structure is handled through the Layout tab.

\* Logo on the report (B): Administrators can upload a custom company logo to appear in the header of the report. This ensures that exported PDFs and web views align with corporate branding standards.

\* Width of the report (D): The layout editor allows users to define the report width, typically choosing between a fixed pixel width (often used to ensure a consistent look on printed paper or PDF) or a percentage-based fluid width that adjusts to the browser window.

While the platform allows for some styling, granular control over the font of the report content (Option A) is generally limited to global CSS or predefined themes rather than individual report layout settings. Similarly, the position of the page number (Option C) is usually a fixed element of the report's footer template and is not a standard customizable field within the primary web-based report layout wizard.

## NEW QUESTION # 62

.....

There are no threshold limits to attend the Observability-Self-Hosted-Fundamentals test such as the age, sexuality, education background and your job conditions, and anybody who wishes to improve their volume of knowledge and actual abilities can attend the test. Our Observability-Self-Hosted-Fundamentals study materials contain a lot of useful and helpful knowledge which can help you find a good job and be promoted quickly. Our Observability-Self-Hosted-Fundamentals Study Materials are compiled by the senior experts elaborately and we update them frequently to follow the trend of the times.
