- A. Use a Visualforce page with a custom controller to invoke the Lightning Web Component using a call to an Apex method.
- B. Embed the Lightning Web Component is a Visualforce Component and add directly to the page layout.
- **C. Use the Lightning Out JavaScript library to embed the Lightning Web Component in a Visualforce page and add to the page layout.**
- D. Wrap the Lightning Web Component in an Aura Component and surface the Aura Component as a Visualforce tab.

Answer: C

NEW QUESTION # 190

A team of developers is working on a source-driven project that allows them to work independently, with many different org configurations. Which type of Salesforce orgs should they use for their development?

- A. Developer orgs
- B. Developer sandboxes
- **C. Scratch orgs**
- D. Full Copy sandboxes

Answer: C

Explanation:

Scratch orgs are short-term Salesforce environments that you can spin up to work on a feature. They are source-driven and disposable, meaning you can create and delete them as needed. They are fully configurable, allowing you to emulate different Salesforce editions with different features and settings. You can also install packages and deploy synthetic or dummy data for testing. Scratch orgs are ideal for developing in a source-driven way, as they enable source tracking, which keeps your local source files and

the metadata in your org in sync. You can use Salesforce CLI or an IDE to create, open, and manage scratch orgs. Scratch orgs are different from other types of Salesforce orgs, such as Developer sandboxes, Full Copy sandboxes, and Developer orgs, which are long-term, persistent, and not source-driven. References:

* Scratch Orgs from the Salesforce DX Developer Guide

* Develop in Scratch Orgs from the Lightning Web Components Developer Guide

* Manage Scratch Orgs from the Dev Hub Org from the Salesforce DX Developer Guide

NEW QUESTION # 191

.....
