- Perform actions from the Admin console: This topic delves into troubleshooting customer concerns, setting up a trial, pushing applications, and performing device actions from the Admin console.

Google Professional ChromeOS Administrator Exam Sample Questions (Q105-Q110):

NEW QUESTION # 105

What is needed for an admin to remote desktop to a user or managed guest session devices with the Admin console?

- A. The admin must be in the same OU as the remote device
- B. The user must share the session pin with the admin
- C. Both the admin and the remote device must be on the same network
- **D. The user must accept the connection request**

Answer: D

Explanation:

To initiate a remote desktop session to a ChromeOS device using the Admin console, the administrator needs the user's consent. The remote desktop feature works by sending a connection request to the user's device, which they must explicitly accept before the session can start. This ensures user privacy and prevents unauthorized access.

NEW QUESTION # 106

You have been tasked with selecting a 3rd party IdP to allow logging into ChromeOS devices. Your ChromeOS devices are displaying an "Unable to sign in to Google" message. How should you troubleshoot this?

- A. Apply the SSO certificate to the ChromeOS device
- B. Check Multi-Factor Authentication for the user account in the Google Admin console
- **C. Ensure the Identity provider is using an SAML compliant connection**
- D. Disable the SSO connection in the Google Admin console

Answer: C

Explanation:

The error message "Unable to sign in to Google" in the context of 3rd party IdP login typically points towards an issue with the SAML (Security Assertion Markup Language) connection. SAML is the standard protocol used for authentication between ChromeOS devices and external identity providers.

Here's a breakdown of troubleshooting steps:

* Verify SAML Compliance: The most critical step is to ensure that the 3rd party IdP is configured correctly to use SAML 2.0 and is adhering to the required SAML attributes and formatting.

* Check IdP Configuration: Review the SAML configuration settings in both the Google Admin console (under Security > Set up single sign-on (SSO) with a third party IdP) and the 3rd party IdP's administration portal. Ensure that the entity IDs, SSO URLs, and certificate information match exactly.

* Test SAML Connection: Use a SAML testing tool (e.g., SAML Tracer) to simulate the login process and inspect the SAML assertions. This can help pinpoint any errors or inconsistencies in the SAML response.

* Google Admin Console Logs: Check the Google Admin console logs for any relevant error messages related to the SAML authentication process.

* Contact IdP Support: If the issue persists, reach out to the support team of your 3rd party IdP for further assistance. They may have specific troubleshooting steps or logs to help diagnose the problem.

* Set up single sign-on (SSO) with a third party IdP: <https://support.google.com/a/answer/60224>

NEW QUESTION # 107

Which remote command is required to remove a device from management policy updates?

- A. Reset
- **B. Deprovision**

- C. Disable
- D. Powerwash

Answer: B

Explanation:

The "Deprovision" command is specifically designed to remove a ChromeOS device from management policy updates. This means the device will no longer receive updates, configurations, or restrictions pushed from the Google Admin console.

Here's what happens when you deprovision a device:

- * Policy Removal: All enterprise policies and configurations are removed from the device.
 - * Management Removal: The device is disassociated from the Google Admin console and no longer considered managed.
 - * Data Wipe (Optional): You can choose to wipe the device's data during deprovisioning to ensure no company data remains.
- Other options like "Reset," "Disable," or "Powerwash" may have different effects:
- * Reset: Resets the device to factory settings but might not remove management if not done through the Admin console.
 - * Disable: Prevents the user from signing in but doesn't remove policies or management.
 - * Powerwash: Factory resets the device, removing all user data and configurations, including management.

NEW QUESTION # 108

Which email address should an admin use when setting up an online trial of ChromeOS?

- A. Organization email address
- B. Google email address
- C. Personal email address
- D. Temporary email address

Answer: A

Explanation:

When setting up an online trial for ChromeOS or related Google services, it is essential to use an organization email address. This ensures that the trial is associated with the correct domain and is managed centrally.

Using personal or temporary addresses can result in configuration issues or lack of proper administrative control.

Verified Answer from Official Source:

The correct answer is verified from the Google Chrome Enterprise Setup Guide, which advises using an official organizational email when registering for trials.

"To begin a ChromeOS trial, sign up using your organization's email address to ensure the trial is associated with your business domain." Using an organization email address ensures the trial setup aligns with enterprise management and integrates correctly with existing Google Workspace configurations.

Objectives:

- * Properly initiate ChromeOS trials for enterprise use.
- * Maintain organizational control over trial configurations.

NEW QUESTION # 109

What are two ways customers can open a support case for ChromeOS? Choose 2 answers

- A. Contact the device manufacturer
- B. File case through Customer Care Portal
- C. Chat support via the Admin console
- D. Send an email to ChromeOS support
- E. File feedback on the device with Alt + Shift + I

Answer: A,B

Explanation:

* B. Contact the device manufacturer: ChromeOS devices are manufactured by various companies like Acer, HP, Lenovo, etc. Each manufacturer provides its own support channels, including phone, email, or chat support. Customers can contact the manufacturer for hardware-related issues or specific device configurations.

* D. File a case through the Customer Care Portal: Google provides a customer care portal where customers can submit support cases online. This portal allows users to describe their issues, attach relevant files, and track the progress of their case.

Why other options are incorrect:

writeablog.net, elearning.eauquardho.edu.so, Disposable vapes
