Wenn Sie die neuesten und genauesten Prüfungsfragen zur SAP C-S4TM-2023 Zertifizierungsprüfung von Pass4Test wählen, ist der Erfolg nicht weit entfernt.

SAP C-S4TM-2023 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• SAP Transportation Management Overview and Fundamentals: This topic covers the general processes and functional areas of SAP Transportation Management, including external and embedded systems. It also discusses transportation tasks and their management.
Thema 2	• Freight Order Management: Carrier selection, tendering, freight documents, and integrations are covered here. This topic also includes communication with external and internal parties, a key aspect of freight order management.
Thema 3	• Charge Calculation & Freight Settlement: Setup, integration, and cost distribution are the key sub-topics here. This topic also covers freight contracts and strategic procurement and selling.

C-S4TM-2023 Fragenpool & C-S4TM-2023 Exam Fragen

Pass4Test ist eine Website, die Bedürfnisse der Kunden abdecken kann. Diejenigen, die unsere Simulationssoftware zur SAP C-S4TM-2023 IT-Zertifizierungsprüfung benutzt und die Prüfung bestanden haben, sind unsere Stammgäste geworden. Pass4Test stellt Ihnen die fortschrittliche Ausbildungstechnik zur Verfügung, die Ihnen beim Bestehen der SAP C-S4TM-2023 Zertifizierungsprüfung hilft.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management C-S4TM-2023 Prüfungsfragen mit Lösungen (Q78-Q83):

78. Frage

Which transactions can you use to run the path finder? Note: There are 2 correct answers to this question.

- A. Explanation tool
- B. Transportation network cockpit
- C. Carrier selection
- D. Edit freight order

Antwort: A,B

Begründung:

In SAP S/4HANA Transportation Management, the path finder is a tool used to analyze and visualize transportation routes and networks, helping planners understand possible paths for freight. According to the SAP documentation:

* Transportation network cockpit (C): This transaction provides a comprehensive interface for managing transportation planning, including the ability to run the path finder to analyze routes and connections within the transportation network.

* Explanation tool (D): The explanation tool allows users to analyze the results of planning activities, including running the path finder to understand the routes considered by the optimizer or manual planning.

The other options are incorrect:

* Carrier selection (A) focuses on selecting carriers based on criteria like cost or priority, not on running the path finder.

* Edit freight order (B) is used to modify freight order details but does not directly support running the path finder.

SAP S/4HANA Cloud Private Edition, Transportation Management Study Guide: Unit 3 - Transportation Planning, Section on Path Finder and Transportation Network Cockpit.

SAP Help Portal: Transportation Management - Transportation Network Cockpit ().

79. Frage

You have two sales orders with three items each for the same customer with the same delivery date. No incompatibilities exist. The following customizing settings are defined:

* Build freight units automatically

* Freight unit building rule strategy is "consolidate as much as possible" What is the minimum number of freight units that are created?

- A. 0
- B. 1
- C. 2
- D. 3

Antwort: B

Begründung:

In SAP S/4HANA Transportation Management, freight units are created based on sales order items, with the freight unit building rule strategy determining consolidation. With the settings "Build freight units automatically" and "consolidate as much as possible," the system combines items into the fewest possible freight units, provided no incompatibilities exist. According to the SAP documentation:

* Two sales orders with three items each result in six items total.

* Since the items are for the same customer, have the same delivery date, and have no incompatibilities, the "consolidate as much as

possible" strategy combines all six items into one freight unit (A), assuming other criteria (e.g., same source/destination) are met. The other options are incorrect:

- * B (3) and C (6) assume less consolidation (e.g., one freight unit per sales order or item).
- * D (2) assumes one freight unit per sales order, which is not the maximum consolidation.

Reference:

SAP S/4HANA Cloud Private Edition, Transportation Management Study Guide: Unit 1 - Transportation Management Overview and Fundamentals, Section on Freight Unit Building Rules.

80. Frage

What functionality is available with Basic Shipping in SAP S/4HANA Supply Chain for transportation management? Note: There are 3 correct answers to this question.

- **A. Transportation planning based on inbound deliveries**
- B. Transportation planning based on forwarding orders
- **C. Transportation planning based on outbound deliveries**
- **D. Transportation execution without event management**
- E. Transportation planning based on sales orders

Antwort: A,C,D

Begründung:

Basic Shipping in SAP S/4HANA Supply Chain for Transportation Management provides limited transportation management functionality compared to Advanced Shipping. According to the SAP documentation, the following features are available:

* Transportation execution without event management (A): Basic Shipping supports execution processes like freight order creation and carrier assignment but does not include event management capabilities.

* Transportation planning based on inbound deliveries (B): Basic Shipping allows planning for inbound deliveries, enabling transportation requirements to be managed for goods receipt.

* Transportation planning based on outbound deliveries (C): Basic Shipping supports planning for outbound deliveries, covering the shipping process from warehouses to customers.

The other options are incorrect:

* Transportation planning based on forwarding orders (D) is part of Advanced Shipping, typically used in logistics service provider scenarios.

* Transportation planning based on sales orders (E) is not directly supported in Basic Shipping, as sales orders trigger order-based transportation requirements in Advanced Shipping.

81. Frage

You are using SAP S/4HANA without geographical services.

How can you determine the geographical coordinates for a location? Note: There are 2 correct answers to this question.

- A. The location coordinates are determined based on manual entry.
- **B. The location coordinates are determined at region or country level.**
- **C. The location coordinates are determined at street level.**
- D. The location coordinates cannot be determined.

Antwort: B,C

Begründung:

Transportation Management Overview and Fundamentals

82. Frage

To which of the following can you assign a dimensional weight profile?

- A. Calculation base
- **B. Calculation profile**
- C. Charge profile
- D. Charge type

Antwort: B

83. Frage

.....
