Huawei HCIP-AI-EI Developer V2.5 Sample Questions (Q50-Q55):

NEW QUESTION # 50

The development of large models should comply with ethical principles to ensure the legal, fair, and transparent use of data.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

Ethical AI development requires ensuring that large models are trained and deployed in a way that respects laws, fairness, and transparency. This includes preventing bias, ensuring user privacy, protecting intellectual property, and being transparent about data usage and decision-making processes.

Exact Extract from HCIP-AI EI Developer V2.5:

"The development and deployment of large models must follow ethical principles to ensure legal, fair, and transparent use of data, avoiding bias and misuse." Reference:HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Ethical AI Practices

NEW QUESTION # 51

What are the adjacency relationships between two pixels whose coordinates are (21,13) and (22,12)?

- A. 8-adjacency
- B. No adjacency relationship
- C. 4-adjacency
- D. Diagonal adjacency

Answer: A,D

Explanation:

Pixel adjacency describes how pixels are connected:

* 4-adjacency:Pixels share a side (up, down, left, right).

* Diagonal adjacency:Pixels touch at a corner.

* 8-adjacency:Combination of 4-adjacency and diagonal adjacency.

Given coordinates (21,13) and (22,12), the pixels differ by 1 in both x and y directions, meaning they meet at a corner - this is diagonal adjacency. Since 8-adjacency includes both side and diagonal adjacency, they are also 8-adjacent.

Exact Extract from HCIP-AI EI Developer V2.5:

"In 8-adjacency, pixels are considered neighbors if they are connected horizontally, vertically, or diagonally.

Diagonal adjacency occurs when pixels touch at a corner."

NEW QUESTION # 52

Which of the following statements about the functions of layer normalization and residual connection in the Transformer is true?

- A. Residual connections and layer normalization help prevent vanishing gradients and exploding gradients in deep networks.
- B. Layer normalization accelerates model convergence and does not affect model stability.
- C. Residual connections primarily add depth to the model but do not aid in gradient propagation.
- D. In shallow networks, residual connections are beneficial, but they aggravate the vanishing gradient problem in deep networks.

Answer: A

Explanation:

In Transformers:

* Residual connections help preserve gradient flow through deep networks, mitigating vanishing

/exploding gradient issues.

* Layer normalization stabilizes training by normalizing across features, improving convergence speed and training stability. Thus, A is correct, while B, C, and D are incorrect.

Exact Extract from HCIP-AI EI Developer V2.5:

"Residual connections and layer normalization stabilize deep network training, prevent gradient issues, and accelerate convergence."

NEW QUESTION # 53

If a scanned document is not properly placed, and the text is tilted, it is difficult to recognize the characters in the document. Which of the following techniques can be used for correction in this case?

- A. Grayscale transformation
- B. **Rotational transformation**
- C. **Affine transformation**
- D. Perspective transformation

Answer: B,C

Explanation:

When text in scanned images is tilted, rotational transformation can correct the angle of the text to align horizontally. Affine transformation can correct tilt and skew by applying linear transformations such as rotation, scaling, and translation while preserving parallelism of lines. Perspective transformation (A) is used for correcting trapezoidal distortions, while grayscale transformation (B) only adjusts pixel intensity, not orientation.

Exact Extract from HCIP-AI EI Developer V2.5:

"Text skew correction can be achieved using rotation and affine transformations, aligning text baselines and improving OCR accuracy." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: Image Transformation

NEW QUESTION # 54

Huawei Cloud ModelArts is a one-stop AI development platform that supports multiple AI scenarios. Which of the following scenarios are supported by ModelArts?

- A. **Object detection**
- B. **Image classification**
- C. **Speech recognition**
- D. **Video analytics**

Answer: A,B,C,D

Explanation:

ModelArts provides an integrated environment for data labeling, model training, deployment, and management, supporting various AI application scenarios:

- * Image classification for categorizing visual content.
- * Object detection for locating and identifying multiple objects in images or video frames.
- * Speech recognition for converting speech to text.
- * Video analytics for automated video content analysis.

Exact Extract from HCIP-AI EI Developer V2.5:

"ModelArts supports a wide range of AI tasks including image classification, object detection, speech recognition, and intelligent video analytics." Reference: HCIP-AI EI Developer V2.5 Official Study Guide - Chapter: ModelArts Overview
