prep, they all have marked change in personal capacity to deal with the SPLK-3002 exam intellectually. The world is full of chicanery, but we are honest and professional in this area over ten years. Even if you are newbie, it does not matter as well. To pass the exam in limited time, you will find it as a piece of cake with the help of our SPLK-3002 study engine!

Splunk IT Service Intelligence Certified Admin Sample Questions (Q26-Q31):

NEW QUESTION # 26

When troubleshooting KPI search performance, which search names in job activity identify base searches?

- A. Indicator - Base - XXXX - Shared Search
- **B. Indicator - Shared - xxxx - ITSI Search**
- C. Indicator - Base - xxxx - ITSI Search
- D. Indicator - XXXX - Base Search

Answer: B

Explanation:

In the context of troubleshooting KPI search performance in Splunk IT Service Intelligence (ITSI), the search names in the job activity that identify base searches typically follow the pattern "Indicator - Shared - xxxx - ITSI Search." These base searches are fundamental components of the KPI calculation process, aggregating and preparing data for further analysis by KPIs. Identifying these base searches in the job activity is crucial for diagnosing performance issues, as these searches can be resource-intensive and impact overall system performance. Understanding the naming convention helps administrators and analysts quickly pinpoint the base searches related to specific KPIs, facilitating more effective troubleshooting and optimization of search performance within the ITSI environment.

NEW QUESTION # 27

When changing a service template, which of the following will be added to linked services by default?

- A. Entity Rules.
- B. Thresholds.
- C. Health score.
- **D. New KPIs.**

Answer: D

Explanation:

C) New KPIs. This is true because when you add new KPIs to a service template, they will be automatically added to all the services that are linked to that template. This helps you keep your services consistent and up-to-date with the latest KPI definitions. The other options will not be added to linked services by default because:

A) Thresholds. This is not true because when you change thresholds in a service template, they will not affect the existing thresholds in the linked services. You need to manually apply the threshold changes to each linked service if you want them to inherit the new thresholds from the template.

B) Entity rules. This is not true because when you change entity rules in a service template, they will not affect the existing entity rules in the linked services. You need to manually apply the entity rule changes to each linked service if you want them to inherit the new entity rules from the template.

D) Health score. This is not true because when you change health score settings in a service template, they will not affect the existing health score settings in the linked services. You need to manually apply the health score changes to each linked service if you want them to inherit the new health score settings from the template.

NEW QUESTION # 28

Which step is required to install ITSI on a single Search Head?

- **A. Use the Splunk -> Manage Apps Dashboard to download and install.**
- B. Run splunk_apply shcluster-bundle
- C. All of the above.
- D. Untar the ITSI package in <splunk home>/etc/apps

Answer: A

Explanation:

To install Splunk IT Service Intelligence (ITSI) on a single Search Head, one of the straightforward methods is to use the Splunk Web interface, specifically the "Manage Apps" dashboard, to download and install ITSI. This method is user-friendly and does not require manual file handling or command-line operations. By navigating to "Manage Apps" in the Splunk Web interface, users can find ITSI in the app repository or upload the ITSI installation package if it has been downloaded previously. From there, the installation process is initiated through the Splunk Web interface, simplifying the setup process. This approach ensures that the installation follows Splunk's standard app installation procedures, helping to avoid common installation errors and ensuring that ITSI is correctly integrated into the Splunk environment.

NEW QUESTION # 29

Which glass table feature can be used to toggle displaying KPI values from more than one service on a single widget?

- A. Service templates.
- B. Service dependencies.
- C. Service swapping.
- D. Ad-hoc search.

Answer: C

Explanation:

Reference:

A glass table is a visualization tool that allows you to monitor the interrelationships and dependencies across your IT and business services. You can add metrics like KPIs, ad hoc searches, and service health scores that update in real time against a background that you design. One of the features of glass tables is service swapping, which enables you to toggle displaying KPI values from more than one service on a single widget. You can use service swapping to compare metrics across different services without creating multiple glass tables or widgets. Reference: Overview of the glass table editor in ITSI, [Configure service swapping on glass tables]

NEW QUESTION # 30

Which of the following is a valid type of Multi-KPI Alert?

- A. Value over time.
- B. Rise over run.
- C. Score over composite.
- D. Status over time.

Answer: D

NEW QUESTION # 31
