

New AB-731 Exam Test, Valid AB-731 Exam Pattern

BONUS!!! Download part of itPass4sure AB-731 dumps for free: <https://drive.google.com/open?id=1PBwtOugFUnKSAK3xq4A4hHrbeJE3rIVK>

A lot of effort, commitment, and in-depth AI Transformation Leader (AB-731) exam questions preparation is required to pass this Microsoft AB-731 exam. For the complete and comprehensive AI Transformation Leader (AB-731) exam dumps preparation you can trust valid, updated, and AB-731 Questions which you can download from the itPass4sure platform quickly and easily.

Microsoft AB-731 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Identify the Business Value of Generative AI Solutions: Covers core generative AI concepts, cost drivers, and business challenges, along with techniques like prompt engineering and RAG that enhance AI value through better data quality, security, and machine learning practices.
Topic 2	<ul style="list-style-type: none">Identify Benefits, Capabilities, and Opportunities for Microsoft's AI Apps and Services: Focuses on mapping Microsoft's AI ecosystem including Microsoft 365 Copilot, Copilot Studio, and Azure AI Foundry Tools to real business use cases, while leveraging built-in scalability, security, and safety benefits.
Topic 3	<ul style="list-style-type: none">Identify an Implementation and Adoption Strategy for Microsoft's AI Apps and Services: Covers responsible AI principles, governance, and organizational adoption planning, including AI councils, champion programs, and an understanding of Copilot and Azure AI licensing models.

>> New AB-731 Exam Test <<

100% Pass 2026 Microsoft New AB-731 Exam Test

Our company is a professional certification exam materials provider, we have occupied in this field for over ten years, and we have rich experiences in offering exam materials. AB-731 exam materials are edited by professional experts, and they possess the skilled

knowledge for the exam, therefore the quality can be guaranteed. In addition, we are pass guarantee and money guarantee for AB-731 Exam Materials, if you fail to pass the exam, we will give you refund. We provide you with free update for 365 days for you after purchasing, and the update version for AB-731 training materials will be sent to your email automatically.

Microsoft AI Transformation Leader Sample Questions (Q29-Q34):

NEW QUESTION # 29

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Content filtering controls can prevent AI-generated responses from exposing confidential and sensitive information.	<input type="radio"/>	<input type="radio"/>
AI-generated content can unintentionally reveal sensitive information if the generative AI model has access to unsecured data sources.	<input type="radio"/>	<input type="radio"/>
To prevent data exposure, only the prompts used by users must be protected by using policies.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Answer Area

Statements	Yes	No
Content filtering controls can prevent AI-generated responses from exposing confidential and sensitive information.	<input checked="" type="radio"/>	<input type="radio"/>
AI-generated content can unintentionally reveal sensitive information if the generative AI model has access to unsecured data sources.	<input checked="" type="radio"/>	<input type="radio"/>
To prevent data exposure, only the prompts used by users must be protected by using policies.	<input type="radio"/>	<input checked="" type="radio"/>

Explanation:

Answer Area

* Content filtering controls can prevent AI-generated responses from exposing confidential and sensitive information. Answer: Yes

* AI-generated content can unintentionally reveal sensitive information if the generative AI model has access to unsecured data sources. Answer: Yes

* To prevent data exposure, only the prompts used by users must be protected by using policies. Answer:

No

* Yes - Content filtering (and related safety controls) can help reduce the chance that responses contain policy-violating or sensitive outputs by detecting and blocking certain categories of content. While filtering is not a perfect guarantee, it is a recognized control to prevent or reduce exposure risk in outputs (for example, blocking regulated data patterns, disallowed content categories, or unsafe disclosures).

* Yes - If a model (or the solution's retrieval layer) can access poorly governed repositories-such as broadly shared folders, misconfigured SharePoint sites, or unsecured databases-then the system can surface sensitive information in responses even without malicious intent. This is why access control, data classification, and permission hygiene are critical prerequisites for deploying AI assistants grounded in organizational content.

* No - Protecting only user prompts is insufficient. Data exposure can occur through multiple paths: retrieved documents, generated outputs, logs/telemetry, training/fine-tuning data, and connector/index configuration. Preventing exposure requires layered controls: data governance (labels, DLP, least privilege), secure connectors, output filtering, auditing, and user training-not prompt policy alone.

NEW QUESTION # 30

Your company discovers that several employees use personal ChatGPT accounts to assist with work tasks.

You are concerned about proprietary data being shared externally. You need to evaluate the business value of rolling out Microsoft 365 Copilot. Which capability is a key benefit of using Copilot instead of a personal ChatGPT account?

- A. accessing internal data in accordance with existing Microsoft 365 policies
- B. analyzing and producing reports based on complex data
- C. generating ideas and solving issues

- D. drafting documents, emails, presentations, and marketing materials

Answer: A

Explanation:

The core business concern in the scenario is data leakage -employees using consumer tools where corporate data could be pasted, stored, or processed outside the organization's governance boundary. The key differentiator of Microsoft 365 Copilot is that it's designed to work inside your Microsoft 365 tenant and to respect the organization's existing security, compliance, identity, and data access controls. Therefore, D is the best answer: Copilot accesses internal work data (Microsoft Graph-connected content such as mail, files, chats, meetings) in accordance with existing Microsoft 365 policies and permissions -meaning it can only surface content the user is already allowed to access, and it operates under enterprise-grade controls (authentication, auditing, compliance boundaries, and admin governance).

Options B and C describe general generative AI capabilities that personal ChatGPT can also provide (brainstorming, drafting, rewriting). A can be done in multiple tools as well, and it is not the primary "enterprise value" difference tied to the stated risk. The scenario's driver is governance: reducing the likelihood of proprietary data leaving controlled systems while still enabling productivity. Rolling out Copilot addresses that by providing "work-safe" AI anchored to organizational content and managed through the same tenant controls your company already uses.

NEW QUESTION # 31

Your company sells hiking and camping gear online. You need a generative AI solution that can interact with customers and ask questions about their needs. What should you include in the solution?

- A. a recommendation engine
- B. computer vision
- C. a chatbot
- D. predictive AI

Answer: C

Explanation:

The requirement is an interactive generative AI experience that can converse with customers and ask clarifying questions (for example: "What climate are you hiking in?", "How many people will share the tent?", "What's your budget?", "Do you prioritize weight or comfort?"). The best solution component for that conversational, question-and-answer interaction is a chatbot (A), powered by a generative AI model.

A chatbot provides the dialog framework: maintaining conversational context across turns, prompting the user for missing requirements, and responding in natural language. This makes it suitable for customer support, guided shopping assistance, troubleshooting, and pre-sales Q & A-especially when customers don't know exactly what they need and benefit from a guided conversation.

The other options don't match the core requirement. Predictive AI (B) forecasts outcomes (like demand or churn) and isn't inherently conversational. Computer vision (C) analyzes images (like recognizing products from photos) and doesn't address asking questions in dialogue. A recommendation engine (D) can be useful in ecommerce, but it typically suggests items based on behavior or attributes; it doesn't by itself provide a conversational flow that asks users questions and adapts responses in natural language. In practice, you can combine a chatbot with a recommendation engine behind the scenes-but the "include in the solution" component that directly satisfies interactive questioning is the chatbot.

NEW QUESTION # 32

Hotspot Question

Select the answer that correctly completes the sentence.

Answer Area

Microsoft 365 Copilot can be used to

- monitor network traffic and alerts in real time.
- create a Microsoft Word document.
- create a list in Microsoft SharePoint.
- modify administrative permissions for Microsoft SharePoint files.

Answer:

Explanation:

Answer Area

Microsoft 365 Copilot can be used to

Explanation:

Box: create a Microsoft Word document

Microsoft 365 Copilot can be used to _____.

Microsoft 365 Copilot can be used to create, draft, and refine Microsoft Word documents through several methods:

Draft from Scratch: You can start a new blank document and use the Draft with Copilot box (accessible via the Copilot icon or Alt + I) to enter a natural language prompt, such as "Write a sales proposal for a new product".

Reference Existing Files: You can ask Copilot to draft a new document based on up to three existing files (like a PowerPoint or another Word doc) by using the Reference a file button or typing / followed by the filename in the prompt box.

Chat-to-Document: Using the Copilot Agent in Word, you can start a project in a chat interface to ideate and then seamlessly transition that content into a structured Word document.

Template Creation: Within the Microsoft 365 Copilot app, you can select "Create" to start a document from a pre-defined template.

NEW QUESTION # 33

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft Foundry provides a unified platform for developers and data professionals to create custom end-to-end AI solutions.	<input type="radio"/>	<input type="radio"/>
Microsoft Foundry provides a unified platform for low-code developers and business users to create custom end-to-end AI solutions.	<input type="radio"/>	<input type="radio"/>
You need a Microsoft 365 Copilot license to access Microsoft Foundry services.	<input type="radio"/>	<input type="radio"/>

Answer:

Explanation:

Explanation:

Answer Area

* Microsoft Foundry provides a unified platform for developers and data professionals to create custom end-to-end AI solutions.

answer: Yes

* Microsoft Foundry provides a unified platform for low-code developers and business users to create custom end-to-end AI solutions. answer: No

* You need a Microsoft 365 Copilot license to access Microsoft Foundry services. Answer: No

* Yes - Microsoft Foundry is positioned by Microsoft as a unified AI platform for building, deploying, and scaling AI apps and agents, with enterprise governance in a single environment. Microsoft explicitly describes Foundry as enabling developers (and, in broader descriptions, data professionals

/enterprises) to build and operate AI solutions end-to-end, which aligns with the statement.

* No - While Foundry can streamline AI development workflows and may include experiences that reduce complexity, the statement specifically targets low-code developers and business users creating custom end-to-end AI solutions. In Microsoft's ecosystem, that "low-code/business-user" agent/app- building lane is more directly associated with tools like Copilot Studio/Power Platform, whereas Foundry is primarily presented as the platform for developers and technical teams building and governing AI solutions. Therefore, as written, the statement is not the best characterization.

* No - Access to Microsoft Foundry services is not gated by a Microsoft 365 Copilot license. Foundry is part of the Azure AI platform experience (formerly Azure AI Studio) and is accessed through Azure, using Azure subscription-based service consumption. Microsoft 365 Copilot licensing is for Microsoft 365 Copilot experiences, not a prerequisite to use Foundry services.

NEW QUESTION # 34

.....

The Microsoft AB-731 certification exam is a valuable asset for beginners and seasonal professionals. If you want to improve your career prospects then AB-731 certification is a step in the right direction. Whether you're just starting your career or looking to advance your career, the Microsoft AB-731 Certification Exam is the right choice.
