Our ACD101 Latest Questions is one of the most wonderful reviewing Appian Associate Developer study training dumps in our industry, so choose us, and together we will make a brighter future.

Appian Associate Developer Sample Questions (Q109-Q114):

NEW QUESTION # 109

You receive a bug ticket that states " After selecting a value for the drop-down field, the value disappears. " You investigate and notice that when you select the drop-down, the proper choice labels display. When you select an option, the value updates properly in the corresponding rule input.

What is the issue and how can you fix this bug?

- A. The user group for the lookup table is incorrect. You need to add the user to the proper group.
- B. The choice labels parameter of the drop-down field is not configured as a list. You need to wrap the value with curly brackets.
- C. The value parameter is improperly configured on the drop-down component. You need to map the value to the proper rule input or variable.

Answer: C

Explanation:

The described bug typically occurs when the value parameter of the drop-down component is not correctly mapped to the corresponding rule input or variable that is supposed to hold the selected value. To fix the issue, you should ensure that the drop-down's value parameter is correctly mapped so that the selected option is retained and displayed properly.

NEW QUESTION # 110

Which statement regarding the use of rule inputs for expression rules is true?

- A. The data type for rule inputs should be set only for Custom Data Types (CDTs).
- B. Only basic data types should be used for rule inputs. Custom Data Types (CDTs) or records should always be queried within the expression rule rather than passed in via rule input.
- C. If the value passed in via rule input may be a list of numbers, the rule input must be configured as an "Array".

Answer: C

NEW QUESTION # 111

You are working on an existing process model with three process variables:

1. pv!vehicleID (integer)
2. pv!vehicle(Custom Data Type (CDT))
3. pv!dealershipName (text)

You have a script task with an output variable, defined as rule!VIM_getVehicle(vehicleID: pv!vehicleID).

The result is saved to pv!vehicle.

The rule VIM_getDealershipName() accepts the dealership ID, which is a field on the vehicle CDT, and returns the dealership name.

What should you update in the process model to set the value for pv!dealershipName?

- A. Add a new script task, and add an input variable defined as rule!VIM_getDealershipName(ac!vehicle.dealershipName) that saves into pv!dealershipName.
- B. Move the existing output variable to the inputs tab, and name it "vehicle". Add output variable defined as rule!VIM_getDealershipName(ac!vehicle.dealershipId) and save that value to pv!dealershipName.
- C. Add another output variable defined as rule!VIM_getDealershipName(pv!vehicle.dealershipId) and save that value to pv!dealershipName.

Answer: C

NEW QUESTION # 112

You need to create a record type with data sync enabled.
What are the supported data sources?

- A. Salesforce, Process Models, Database
- B. Web Services, Process Reports, Database
- C. Web Services, Salesforce, Database

Answer: A

Explanation:

Appian's data sync feature supports synchronization from three primary data sources: Salesforce, Process Models, and Databases. This allows for the creation of record types that can efficiently access and manipulate data from these sources, leveraging Appian's capabilities to provide real-time insights and interactions with external systems and internal processes.

NEW QUESTION # 113

After selecting a record, a user wants to initiate an activity in the context of that selected record.
You start by creating the process model that implements this activity.
What should you do next?

- A. Configure a site page as an action to kick off the process model.
- B. Add the process model as a record related action to that record.
- C. Add the process model as a record list action to that record.

Answer: B

Explanation:

a record related action. This allows the action to be performed in the context of a specific record, making it straightforward for users to initiate processes directly from the record view.
