

NSE5_FNC_AD-7.6 높은 통과율 시험덤프자료 - NSE5_FNC_AD-7.6 최신버전 시험덤프 공부

Fortinet NSE5_FNC_AD-7.6 시험준비를 어떻게 해야할지 고민중이세요? 이 블로그의 이 글을 보는 순간 고민은 버리셔도 됩니다. DumpTOP는 IT업계의 많은 분들께Fortinet NSE5_FNC_AD-7.6시험을 패스하여 자격증을 취득하는 목표를 이루게 도와드렸습니다. 시험을 쉽게 패스한 원인은 저희 사이트에서 가장 적중율을 높은 자료를 제공해드리기 때문입니다.덤프구매후 1년무료 업데이트를 제공해드립니다.

우리 DumpTOP사이트에서 제공되는Fortinet인증NSE5_FNC_AD-7.6시험덤프의 일부분인 데모 즉 문제와 답을 다운 받으셔서 체험해보면 우리DumpTOP에 믿음이 갈 것입니다. 우리DumpTOP의 제품을 구매하신다고 하면 우리는 최선을 다하여 여러분들한테 최고의 버전을 제공함으로 한번에Fortinet인증NSE5_FNC_AD-7.6시험을 패스하도록 하겠습니다. IT시험이라고 모두 무조건 외우고 장악하고 많은 시간을 투자해야만 된다는 사상을 깨게 될 것입니다.

>> NSE5_FNC_AD-7.6 높은 통과율 시험덤프자료 <<

최신버전 NSE5_FNC_AD-7.6 높은 통과율 시험덤프자료 완벽한 시험 최신 버전 덤프

우리 DumpTOP에는 최신의Fortinet NSE5_FNC_AD-7.6학습가이드가 있습니다. DumpTOP의 부지런한 IT전문가들이 자기만의 지식과 끊임없는 노력과 경험으로 최고의Fortinet NSE5_FNC_AD-7.6합습자료로Fortinet NSE5_FNC_AD-7.6인증시험을 응시하실 수 있습니다.Fortinet NSE5_FNC_AD-7.6인증시험은 IT업계에서의 비중은 아주 큼니다. 시험신청하시는 분들도 많아지고 또 많은 분들이 우리DumpTOP의Fortinet NSE5_FNC_AD-7.6자료로 시험을 패스했습니다. 이미 패스한 분들의 리뷰로 우리DumpTOP의 제품의 중요함과 정확함을 증명하였습니다.

최신 Fortinet Certification NSE5_FNC_AD-7.6 무료 샘플문제 (Q37-Q42):

질문 # 37

An administrator wants to continually monitor endpoints for the existence of a specific registry key and the status of a required security service.

Which two requirements must be in place for the administrator to use FortiNAC-F compliance monitors? (Choose two.)

- A. Persistent agent
- B. Remediation admin scan
- C. Custom scan
- D. MDM integration

정답: A,C

설명:

Compliance monitors require the persistent agent to continuously evaluate endpoint conditions such as registry keys and service status. A custom scan must be defined to specify the exact registry key and security service checks that the monitor will assess on the endpoint.

질문 # 38

Refer to the exhibits. What would happen if the highlighted port with connected hosts was placed in both the Forced Registration and Forced Remediation port groups?

Ports tab

Status	Device	Label	IP Address	Connection State	Default VLAN	Current VLAN	Admin Status	Operational Status
	Building 1 Switch	IF#5	192.168.10.6	Not Connected			On	Link Up
	Building 1 Switch	IF#5	192.168.10.6	Registered Host			On	Link Up
	Building 1 Switch	IF#7	192.168.10.6	Not Connected			On	Link Up
	Building 1 Switch	IF#8	192.168.10.6	Not Connected			On	Link Up
	Building 1 Switch	IF#9	192.168.10.6	Not Connected			On	Link Down
	Building 1 Switch	IF#10	192.168.10.6	Registered Host			On	Link Up
	Building 1 Switch	IF#11	192.168.10.6	Not Connected			On	Link Down
	Building 1 Switch	IF#12	192.168.10.6	Not Connected			On	Link Down
	Building 1 Switch	IF#13	192.168.10.6	Multiple Hosts			On	Link Up
	Building 1 Switch	IF#14	192.168.10.6	Not Connected			On	Link Down

Adapters tab

Status	Host Status	IP Address	Physical Address	All IPs	Connection	Hosts
			00:06:D6:AC:7F:17		Wired Infrastructure	Multiple Hosts
			00:11:2F:CB:81:52		Wired Infrastructure	

- A. Both types of enforcement would be applied
- **B. Only the higher ranked enforcement group would be applied.**
- C. Multiple enforcement groups could not contain the same port.
- D. Enforcement would be applied only to rogue hosts

정답: B

설명:

In FortiNAC-F, Port Groups are used to apply specific enforcement behaviors to switch ports.

When a port is assigned to an enforcement group, such as Forced Registration or Forced Remediation, FortiNAC-F overrides normal policy logic to force all connected adapters into that specific state. The exhibit shows a port (IF#13) with "Multiple Hosts" connected, which is a common scenario in environments using unmanaged switches or hubs downstream from a managed switch port.

According to the FortiNAC-F Administrator Guide, it is possible for a single port to be a member of multiple port groups. However, when those groups have conflicting enforcement actions--such as one group forcing a registration state and another forcing a remediation state--FortiNAC-F utilizes a ranking system to resolve the conflict. In the FortiNAC-F GUI under Network > Port Management > Port Groups, each group is assigned a rank. The system evaluates these ranks, and only the higher ranked enforcement group is applied to the port. If a port is in both a Forced Registration group and a Forced Remediation group, the group with the numerical priority (rank) will dictate the VLAN and access level assigned to all hosts on that port.

This mechanism ensures consistent behavior across the fabric. If the ranking determines that

"Forced Registration" is higher priority, then even a known host that is failing a compliance scan (which would normally trigger Remediation) will be held in the Registration VLAN because the port-level enforcement takes precedence based on its rank.

"A port can be a member of multiple groups. If more than one group has an enforcement assigned, the group with the highest rank (lowest numerical value) is used to determine the enforcement for the port. When a port is placed in a group with an enforcement, that enforcement is applied to all hosts connected to that port, regardless of the host's current state."

질문 # 39

What must an administrator configure to allow FortiNAC-F to process incoming syslog messages that are not supported by default?

- A. A Log Receiver
- B. A Syslog Service Connector
- **C. A Security Event Parser**

- D. A Security Action

정답: C

설명:

FortiNAC-F provides a robust engine for processing security notifications from third-party devices.

For standard integrations, such as FortiGate or Check Point, the system comes pre-loaded with templates to interpret incoming data. However, when an administrator needs FortiNAC-F to process syslog messages from a vendor or device that is not supported by default, they must configure a Security Event Parser.

The Security Event Parser acts as the translation layer. It uses regular expressions (Regex) or specific field mappings to identify key data points within a raw syslog string, such as the source IP address, the threat type, and the severity. Without a parser, FortiNAC-F may receive the syslog message but will be unable to "understand" its contents, meaning it cannot generate the necessary Security Event required to trigger automated responses. Once a parser is created, the system can extract the host's IP address from the message, resolve it to a MAC address via L3 polling, and then apply the appropriate security rules. This allows for the integration of any security appliance capable of sending RFC-compliant syslog messages.

"FortiNAC parses the information based on pre-defined security event parsers stored in FortiNAC's database... If the incoming message format is not recognized, a new Security Event Parser must be created to define how the system should extract data fields from the raw syslog message. This enables FortiNAC to generate a security event and take action based on the alarm configuration."

질문 # 40

An organization has FortiNAC-F deployed and is using layer 3 isolation networks across multiple sites with firewalls.

At a minimum, which three protocols must be allowed between the isolation networks and FortiNAC-F? (Choose three.)

- A. DNS
- B. DDNS
- C. HTTP/HTTPS
- D. DHCP
- E. NTP

정답: A,C,D

설명:

DHCP must be allowed so endpoints in the isolation network can obtain an IP address. DNS must be permitted so isolated hosts can resolve the FortiNAC-F hostname or required resources.

HTTP/HTTPS must be allowed to enable redirection and communication with the FortiNAC-F captive portal for registration and authentication.

질문 # 41

When configuring FortiNAC-F to manage FortiGate VPN users, an endpoint compliance policy must be created for the integration. Why is the endpoint compliance policy necessary for this type of integration?

- A. To validate the VPN client being used
- B. To confirm the installed endpoint certificate
- C. To validate the VPN user credentials
- D. To designate the required agent type

정답: D

설명:

The integration of FortiNAC-F with FortiGate VPN requires a specific policy workflow to bridge the gap between initial user authentication and full network access. When a user connects to the VPN, the FortiGate typically provides the User ID and IP address, but FortiNAC-F requires a MAC address to uniquely identify and manage the endpoint's record.

According to the FortiGate VPN Integration Guide, the Endpoint Compliance Policy is a mandatory component of this setup because it is used to designate the required agent type.

Because a VPN connection is Layer 3, FortiNAC cannot "see" the MAC address through traditional SNMP or L2 polling. The compliance policy instructs the system to present a Captive Portal to the remote user, requiring them to download and run either the Persistent or Dissolvable Agent. The agent then reports the device's MAC address back to FortiNAC, allowing the system to correlate the VPN session with a host record.

Once the agent is running and the MAC is known, FortiNAC-F can evaluate the device's security posture (if scanning is configured)

and send the necessary FSSO tags back to the FortiGate to lift the initial network restrictions. Without the compliance policy to enforce the agent requirement, the connection would remain in an isolated "IP-only" state with no unique hardware identity.

"The Endpoint Compliance Policy is necessary to control the agent requirement for VPN users.

Create a default VPN Endpoint Compliance Policy to distribute an agent via captive portal for isolated machines. This policy allows the administrator to designate the required agent type (Persistent or Dissolvable) that will be used to collect the hardware (MAC) address and perform health scans on the remote endpoint."
