

Free C-BW4H-2505 Practice - C-BW4H-2505 Well Prep

2026 Latest PracticeMaterial C-BW4H-2505 PDF Dumps and C-BW4H-2505 Exam Engine Free Share:
https://drive.google.com/open?id=1fhXnGfg3kGnk572pVQcuXJ_-iDZMtiLy

As we all know, passing the exam just one time can save your money and time, our C-BW4H-2505 exam dumps will help you pass the exam just one time. C-BW4H-2505 exam materials are edited by professional experts, and they are quite familiar with the exam center, therefore quality can be guaranteed. In addition, C-BW4H-2505 exam materials cover most of knowledge points for the exam, and you can have a good command of the major knowledge points. We offer you free demo to have a try, and you can try before buying. Online and offline service are available, if you have any questions for C-BW4H-2505 Training Materials, you can consult us.

SAP C-BW4H-2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Native SAP HANA Modeling: This section evaluates the ability of SAP Consultants to describe and apply native modeling options in SAP HANA. It emphasizes understanding how to build optimized data structures directly within the HANA platform.
Topic 2	<ul style="list-style-type: none">SAP BW4HANA Project and the Modeling Process: This section of the exam assesses how Data Engineers guide and contribute to SAP BW4HANA projects. It includes knowledge of modeling workflows, project lifecycle stages, and collaboration strategies within project teams.
Topic 3	<ul style="list-style-type: none">InfoObjects and InfoProviders: This section tests the knowledge of Data Engineers in working with InfoObjects and InfoProviders in SAP BW4HANA. It involves handling data structures used for organizing, storing, and accessing analytical data.
Topic 4	<ul style="list-style-type: none">SAP Analytics Tools and SAP Analytics Cloud: This section evaluates the skills of SAP Consultants in using tools like SAP Analytics Cloud, Lumira, and Analysis for Office to visualize and interpret data. It focuses on the consultant's ability to apply business intelligence tools within the SAP ecosystem.

Topic 5	<ul style="list-style-type: none"> • Data Acquisition into SAP BW • 4HANA: This section tests how Data Engineers manage data integration into SAP BW • 4HANA from multiple sources. It covers essential knowledge of tools and processes used for data extraction, transformation, and loading into the SAP environment.

SAP C-BW4H-2505 Well Prep, Valid C-BW4H-2505 Exam Objectives

C-BW4H-2505 questions & answers are valid, covering the whole chapter in the actual test and the key points. You can take C-BW4H-2505 pdf torrent as your study reference. After you get the C-BW4H-2505 exam dumps, do not worry about the update, because one year free update is provided to you. Please pay attention to your payment email and check if there is any C-BW4H-2505 Updated Dumps. Dear, if you have any questions about C-BW4H-2505 study torrent, you can contact us by email or online chat as you like. In addition, we have money back guarantee, in case of failure, we will give you full refund.

SAP Certified Associate - Data Engineer - SAP BW/4HANA Sample Questions (Q28-Q33):

NEW QUESTION # 28

Where is the button that automatically generates a process chain?

- A. In the SAP GUI transaction for Process Chain Maintenance
- **B. In the editor of a data flow object**
- C. In the app called Process Chain Editor
- D. In the editor of a data transfer process

Answer: B

NEW QUESTION # 29

Which external hierarchy properties can be changed in the query definition? Note: There are 3 correct answers to this question.

- **A. Sort direction**
- **B. Exp to level**
- C. Time dependency
- **D. Position of child nodes**
- E. Display text nodes

Answer: A,B,D

NEW QUESTION # 30

Which SAP BW/4HANA objects support the feature of generating an external SAP HANA View? Note: There are 2 correct answers to this question.

- **A. BW query**
- **B. Open ODS view**
- C. Semantic group object
- D. Composite Provider

Answer: A,B

Explanation:

In SAP BW/4HANA, certain objects support the generation of external SAP HANA views, enabling seamless integration with SAP HANA's in-memory capabilities and allowing consumption by other tools or applications outside of SAP BW/4HANA. Below is an explanation of the correct answers:

A). BW query A BW query in SAP BW/4HANA can generate an external SAP HANA view. This feature allows the query to be exposed as a calculation view in SAP HANA, making it accessible for reporting tools like SAP Analytics Cloud (SAC), SAP BusinessObjects, or custom applications. By generating an external HANA view, the BW query leverages SAP HANA's performance optimization while maintaining the analytical capabilities of SAP BW/4HANA.

* SAP BW/4HANA Query Designer includes functionality to expose queries as external HANA views. This is documented in the SAP BW/4HANA Query Design Guide and is part of the broader integration between SAP BW/4HANA and SAP HANA.

B). Open ODS view Open ODS views are designed to provide direct access to data stored in SAP HANA tables or other sources. They inherently support the generation of external SAP HANA views, as they are tightly integrated with SAP HANA's modeling capabilities. Open ODS views act as a bridge between SAP BW/4HANA and SAP HANA, allowing data to be consumed directly by external tools or applications via HANA views.

Reference: The Open ODS view functionality is a core feature of SAP BW/4HANA, as described in the SAP BW/4HANA Modeling Guide. It is specifically designed to leverage SAP HANA's native capabilities, including the generation of external views.

Incorrect Options C. Composite Provider Composite Providers in SAP BW/4HANA combine data from multiple sources (e.g., InfoProviders, Open ODS views, or HANA tables) into a unified structure for reporting. However, Composite Providers do not directly support the generation of external SAP HANA views. While they can be used within SAP BW/4HANA for reporting purposes, their architecture does not include the ability to expose themselves as HANA views.

Reference: The SAP BW/4HANA Modeling Guide explicitly states that Composite Providers are internal to SAP BW/4HANA and do not generate external HANA views.

D). Semantic group object Semantic group objects are used to organize and manage metadata in SAP BW/4HANA. They do not represent physical data structures or support the generation of external SAP HANA views. Instead, they serve as logical containers for grouping related objects, such as InfoObjects or queries, for easier navigation and maintenance.

Reference: The SAP BW/4HANA Administration Guide describes semantic groups as organizational tools rather than data modeling or integration components.

Conclusion The two SAP BW/4HANA objects that support the feature of generating an external SAP HANA view are:

BW query

Open ODS view

These objects enable seamless integration with SAP HANA's in-memory database and allow external tools to consume data modeled in SAP BW/4HANA. This capability underscores the tight integration between SAP BW/4HANA and SAP HANA, leveraging the strengths of both platforms for advanced analytics and reporting.

NEW QUESTION # 31

What are the reasons for implementing Composite Providers? Note: There are 2 correct answers to this question.

- A. To directly expose an SAP HANA table from an external schema
- B. To provide an interface for using BW queries
- C. To persist combined data for reporting
- D. To provide a virtual data mart layer that combines existing BW models

Answer: C,D

Explanation:

Composite Providers in SAP BW/4HANA (part of the SAP Data Engineer - Data Fabric landscape) are essential components used to combine data from multiple sources into a unified view for reporting and analytics. They serve as a flexible tool for creating complex data models by integrating various BW objects, such as InfoProviders, Open ODS views, and external sources. Below is a detailed explanation of why Composite Providers are implemented:

* Explanation: Composite Providers can be configured to persist data by materializing the combined data into a physical table. This is particularly useful when you need to store intermediate results or optimize query performance for frequently accessed reports. Persisting data ensures faster access times and reduces the load on underlying systems.

* In SAP BW/4HANA, Composite Providers allow users to define whether the data should be persisted or remain virtual. This flexibility supports both real-time reporting and optimized batch processing scenarios.

Option B: To directly expose an SAP HANA table from an external schema Explanation: This option is incorrect because Composite Providers are not designed to directly expose SAP HANA tables from external schemas. Instead, they focus on combining data from BW objects or other sources within the BW/4HANA environment. If you need to expose an external HANA table, you would typically use Open ODS views or other integration mechanisms.

Reference: SAP documentation emphasizes that Composite Providers are primarily used for combining BW models rather than exposing external HANA tables.

Option C: To provide an interface for using BW queries Explanation: This option is incorrect because Composite Providers themselves do not directly provide an interface for BW queries. Instead, BW queries are built on top of InfoProviders, including Composite Providers. The role of a Composite Provider is to combine data, while BW queries are used to define the analytical logic and presentation layer.

Reference: According to SAP Data Engineer - Data Fabric guidelines, BW queries are created separately and consume the data exposed by Composite Providers or other InfoProviders.

Option D: To provide a virtual data mart layer that combines existing BW models
Explanation: One of the primary purposes of Composite Providers is to create a virtual data mart layer. This allows users to combine existing BW models (e.g., InfoCubes, DataStore Objects, Open ODS views) without physically moving or duplicating data. By leveraging virtualization, Composite Providers enable real-time access to data while maintaining flexibility and reducing redundancy.

Reference: SAP BW/4HANA promotes the use of Composite Providers as part of its virtual data modeling capabilities, aligning with the principles of SAP Data Fabric to integrate and harmonize data across diverse sources.

U

NEW QUESTION # 32

Which layer of the layered scalable architecture (LSA++) of SAP BW/4HANA is designed as the main storage for harmonized consistent data?

- A. Open Operational Data Store layer
- B. Virtual Data Mart layer
- C. Data Acquisition layer
- **D. Flexible Enterprise Data Warehouse Core layer**

Answer: D

Explanation:

The Layered Scalable Architecture (LSA++) of SAP BW/4HANA is a modern data warehousing architecture designed to simplify and optimize the data modeling process. It provides a structured approach to organizing data layers, ensuring scalability, flexibility, and consistency in data management. Each layer in the LSA++ architecture serves a specific purpose, and understanding these layers is critical for designing an efficient SAP BW/4HANA system.

* LSA++ Overview: The LSA++ architecture replaces the traditional Layered Scalable Architecture (LSA) with a more streamlined and flexible design. It reduces complexity by eliminating unnecessary layers and focusing on core functionalities. The main layers in LSA++ include:

* Data Acquisition Layer: Handles raw data extraction and staging.

* Open Operational Data Store (ODS) Layer: Provides operational reporting and real-time analytics.

* Flexible Enterprise Data Warehouse (EDW) Core Layer: Acts as the central storage for harmonized and consistent data.

* Virtual Data Mart Layer: Enables virtual access to external data sources without physically storing the data.

* Flexible EDW Core Layer: The Flexible EDW Core layer is the heart of the LSA++ architecture. It is designed to store harmonized, consistent, and reusable data that serves as the foundation for reporting, analytics, and downstream data marts. This layer ensures data quality, consistency, and alignment with business rules, making it the primary storage for enterprise-wide data.

* Other Layers:

* Data Acquisition Layer: Focuses on extracting and loading raw data from source systems into the staging area. It does not store harmonized or consistent data.

* Open ODS Layer: Provides operational reporting capabilities and supports real-time analytics.

However, it is not the main storage for harmonized data.

* Virtual Data Mart Layer: Enables virtual access to external data sources, such as SAP HANA views or third-party systems. It does not store data physically.

* Option A: Open Operational Data Store layer This option is incorrect because the Open ODS layer is primarily used for operational reporting and real-time analytics. While it stores data, it is not the main storage for harmonized and consistent data.

* Option B: Data Acquisition layer This option is incorrect because the Data Acquisition layer is responsible for extracting and staging raw data from source systems. It does not store harmonized or consistent data.

* Option C: Flexible Enterprise Data Warehouse Core layer This option is correct because the Flexible EDW Core layer is specifically designed as the main storage for harmonized, consistent, and reusable data. It ensures data quality and alignment with business rules, making it the central repository for enterprise-wide analytics.

* Option D: Virtual Data Mart layer This option is incorrect because the Virtual Data Mart layer provides virtual access to external data sources. It does not store data physically and is not the main storage for harmonized data.

* SAP BW/4HANA Modeling Guide: The official documentation highlights the role of the Flexible EDW Core layer as the central storage for harmonized and consistent data. It emphasizes the importance of this layer in ensuring data quality and reusability.

* SAP Note 2700850: This note explains the LSA++ architecture and its layers, providing detailed insights into the purpose and functionality of each layer.

* SAP Best Practices for BW/4HANA: SAP recommends using the Flexible EDW Core layer as the foundation for building enterprise-wide data models. It ensures scalability, flexibility, and consistency in data management.

Key Concepts: Verified Answer Explanation: SAP Documentation and References: Practical Implications:

When designing an SAP BW/4HANA system, it is essential to:

- * Use the Flexible EDW Core layer as the central repository for harmonized and consistent data.
- * Leverage the Open ODS layer for operational reporting and real-time analytics.
- * Utilize the Virtual Data Mart layer for accessing external data sources without physical storage.

By adhering to these principles, you can ensure that your data architecture is aligned with best practices and optimized for performance and scalability.
