## NEW QUESTION # 171

The screenshot displays the Cisco Secure Cloud Analytics interface. The top navigation bar includes 'Cloud Analytics', 'Monitor', 'Investigate', 'Report', and 'Settings'. A 'Read-Only Mode' banner states: 'Read-Only Mode: Read-only accounts can view any part of the site, but cannot make updates or changes.'

The main content area is titled 'Role Violation'. It includes an 'Alert Type Details' section with the following information:

- Description:** Device is identified with a particular role (e.g., Windows Workstation), but was observed acting in a new role (e.g., SSH server). This alert uses the Role Violation observation and may indicate the device is compromised.
- Next Steps:** Reference the supporting observations and determine whether the new role behavior is intended and part of the normal course of business. If it is not, quarantine the entity. If it is intended, snooze the alert.
- MITRE Tactics:** Persistence
- MITRE Techniques:** Create or Modify System Processes
- Alert Type Priority:** High

The 'Alert Rule Details' section shows:

- Status:** Open
- ID:** 7849
- Latest Observation:** 2023-06-01 13:00:00 GMT+1
- First Observation:** 2022-08-10 02:10:00 GMT+1
- Detected At:** 2022-08-10 02:57:35 GMT+1

The 'Device Outline' section provides details for the device 'ip-10-201-0-15.us-east-2.compute.internal':

- Last updated:** yesterday 2023-05-31
- Name:** ip-10-201-0-15.us-east-2.comp...
- IPs:** 10.201.0.15
- Hostnames:** ip-10-201-0-15.us-east-2.compute.internal
- Roles:** Time Server, Domain Controller, DNS Server, Remote Desktop Server, Windows Server
- Subnets:** 10.0.0.0/8 (Default RFC1918)
- Open Alerts:** 3
- Int Connections:** 265
- Ext Connections:** 37
- Sensors:** cti-ehXXXXb
- Sensor Types:** CTF
- Exporters:** 172.16.16.1, 198.16.133.22

The 'Supporting Observations' section shows a 'Role Violation' alert with the following details:

- Observation Name:** Role Violation
- Time:** 2023-06-01T12:00:00Z
- Creation Time:** 2023-06-01T12:00:00Z
- Role:** Domain Controller
- Violating Tag:** FTPClient
- Violating Ports:** 20, 21, 115, 152, 989, 990
- Source:** 11239
- Session Info:**
  - Start Datetime:** 2023-06-01T13:00:00Z
  - End Datetime:** 2023-06-01T23:59:00Z
  - IP:** 11239
  - Connected Port:** 20, 21, 115, 152, 989, 990

Refer to the exhibit. An engineer is troubleshooting an incident by using Cisco Secure Cloud Analytics. What is the cause of the issue?

- A. An FTP client was installed on a workstation.
- B. An FTP client was installed on a domain controller.
- C. An attacker installed an SSH server on the host.
- D. An attacker opened port 22 on the host.

Answer: B

Explanation:

The screenshot from Cisco Secure Cloud Analytics shows a Role Violation alert. According to the "Supporting Observations" pane, the device with IP 10.201.0.15 is assigned the role of Domain Controller but has demonstrated traffic behavior matching an FTP client, connecting to ports 20, 21, 115, 152, 989, and 990.

This discrepancy triggered the alert.

Cisco SCAZT documentation emphasizes that devices acting outside their expected network roles (e.g., a domain controller acting as an FTP client) indicate potential compromise or misuse. Role-based anomaly detection is part of Visibility and Assurance

mechanisms where baseline behaviors are continuously monitored and flagged when changes occur outside expected policy or operational norms.

#### NEW QUESTION # 172

What role does OIDC play in web and mobile applications?

- A. It defines how applications should be developed
- B. It specifies the physical security measures for devices
- **C. It serves as a protocol for user authentication using an identity provider**
- D. It provides a mechanism for encrypting application data

**Answer: C**
