Moreover, it helps organizations to identify and hire individuals with the necessary knowledge and skills to implement Agile and Scrum practices effectively.

Scrum Professional Scrum Master I Sample Questions (Q35-Q40):

NEW QUESTION # 35

(Why do the Developers need a Sprint Goal?
Choose the best answer.)

- A. A Sprint Goal only gives purpose to Sprint 0.
- B. A Sprint Goal ensures that all of the Product Backlog items selected for the Sprint are implemented.
- C. Sprint Goals are not valuable. Everything is known from the Product Backlog.
- **D. The Developers are more focused with a common yet specific goal.**

Answer: D

Explanation:

The correct answer is D. The Sprint Goal provides the Developers with a common, specific objective that creates focus and coherence during the Sprint. Rather than treating the Sprint as a collection of unrelated backlog items, the Sprint Goal gives the team a shared purpose for the work they are doing. This helps the Developers make trade-offs, collaborate more effectively, and adapt the Sprint Backlog while still moving toward a meaningful outcome.

Option A is incorrect because Scrum does not define Sprint 0 as part of Scrum, and the Sprint Goal applies to every Sprint. Option B is incorrect because the Sprint Goal is highly valuable. The Product Backlog provides ordered possibilities for future work, but the Sprint Goal explains the purpose of the current Sprint. Option C is incorrect because the Sprint Goal does not guarantee that every selected Product Backlog item will be completed. The team may renegotiate scope with the Product Owner as more is learned, while still aiming to achieve the Sprint Goal.

The Sprint Goal supports flexibility. It allows the Developers to adjust their plan during the Sprint without losing direction. That is why Scrum uses a goal-oriented approach rather than only a task-oriented one.

NEW QUESTION # 36

You have six teams using a traditional method to deliver a product. Your management has asked you to start using Scrum. In the initial project there were separate plans and teams for the layers of a software system, i.e. one for the front-end, one for the middle tier, one for the back-end, and one for the interfaces and services. This resembles what is known as component teams. But you have read that it's a good idea to have teams organized by feature.

What are the advantages of keeping component teams while starting Scrum?

- **A. There's less initial disruption than organizing into new teams. As they start, they will discover what works best, and how to potentially re-organize towards this.**
- B. Because they have worked together for some time, they are likely able to start producing shippable Increments faster than new feature teams would.
- C. Component teams generally have the skills needed to create a working Increment of software that provides business value.
- D. There are fewer cross-team dependencies than working in feature teams.

Answer: A

NEW QUESTION # 37

Who starts the Daily Scrum?

- A. The person who has the token.
- **B. Whoever the Development Team decides should start.**
- C. The Scrum Master. This ensures that the Development Team has the meeting and stays within the time-box.
- D. The person who last broke the build.
- E. The person coming in last. This encourages people to be on time and helps to stay within the time-box.

Answer: B

Explanation:

According to the Scrum Guide¹, during each Daily Scrum, each Developer answers three questions:

What did I do yesterday that helped meet our Sprint Goal?

What will I do today to help meet our Sprint Goal?

Do I see any impediment that prevents me or our Development Team from meeting our Sprint Goal?

The Developers can select whatever structure and techniques they want, as long as their Daily Scrum focuses on progress toward achieving their Sprint Goal and producing a usable Increment. The Developers can start with any one person and proceed in any order.

NEW QUESTION # 38

Which three of the following are time-boxed events in Scrum? (Choose the best three answers.)

- A. Release Retrospective.
- B. Sprint 0.
- C. Daily Scrum.
- D. Sprint Testing.
- E. Release Planning.
- F. Sprint Planning.
- G. Sprint Retrospective.

Answer: C,F,G

NEW QUESTION # 39

Who is responsible for managing the progress of work during a Sprint?

- A. The most junior member of the Team.
- B. The Development Team.
- C. The Scrum Master.
- D. The Product Owner.

Answer: B

Explanation:

The correct answer is B, because the Development Team is responsible for managing the progress of work during a Sprint. The Scrum Guide states that "the Development Team tracks this total work remaining at least for every Daily Scrum to project the likelihood of achieving the Sprint Goal. By tracking the remaining work throughout the Sprint, the Development Team can manage its progress."
