100% Pass 2026 Fortinet FCP_FMG_AD-7.6 Latest Exam Preview

With the intense competition in labor market, it has become a trend that a lot of people, including many students, workers and so on, are trying their best to get a FCP_FMG_AD-7.6 certification in a short time. They all long to own the useful certification that they can have an opportunity to change their present state, including get a better job, have a higher salary, and get a higher station in life and so on, but they also understand that it is not easy for them to get a FCP_FMG_AD-7.6 Certification in a short time. If you are the one of the people who wants to get a certificate, we are willing to help you solve your problem.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q56-

Q61):

NEW QUESTION # 56

A FortiManager administrator has moved a FortiGate device to a new ADOM, but they cannot see the policy or object configurations for that FortiGate.

What should the administrator do to see the policy or object configurations?

- A. Import the policy package manually using the Import Configuration wizard.
- B. Use ADOM shared objects to restore all missing data.
- C. Reset the device and add it to the new ADOM again.
- D. Use ADOM sync to restore the missing configurations.

Answer: A

Explanation:

When a FortiGate device is moved from its original ADOM (Source ADOM) to a new ADOM (Target ADOM), only the Device Database (the device's running configuration) moves with it.

The Policy Package and the Policy/Object configurations are not automatically transferred because they are considered part of the Source ADOM's specific policy logic.

NEW QUESTION # 57

Refer to the exhibit. What will happen if the script is run using the Device Database option?
(Choose two.)

- A. You must install these changes using the Install Wizard to a managed device.
- B. The successful execution of a script on the Device Database will create a new revision history.
- C. The Device Settings Status will be tagged as Modified.
- D. The script history will show successful installation of the script on the remote FortiGate.

Answer: A,C

Explanation:
Once scripts are run on the device database, you can then install the changes on a managed device using the installation wizard.
Since the script changed the device settings in FortiManager, the Config Status shows "Modified" and needs to be installed with Installation Wizard.

NEW QUESTION # 58
Push updates are failing on a FortiGate device located behind a network address translation (NAT) device?
Which two settings should the administrator check to correct this problem? (Choose two.)

- A. Make sure FortiGuard updates and web service are enabled on the FortiGuard service interface.
- B. Make sure the NAT device IP address and the correct ports are configured on FortiManager.
- C. Make sure the Bind to IP address option on the FortiGuard service interface is set to the virtual IP address from the NAT device.
- D. Make sure the virtual IP address and the correct ports are configured on the NAT device.
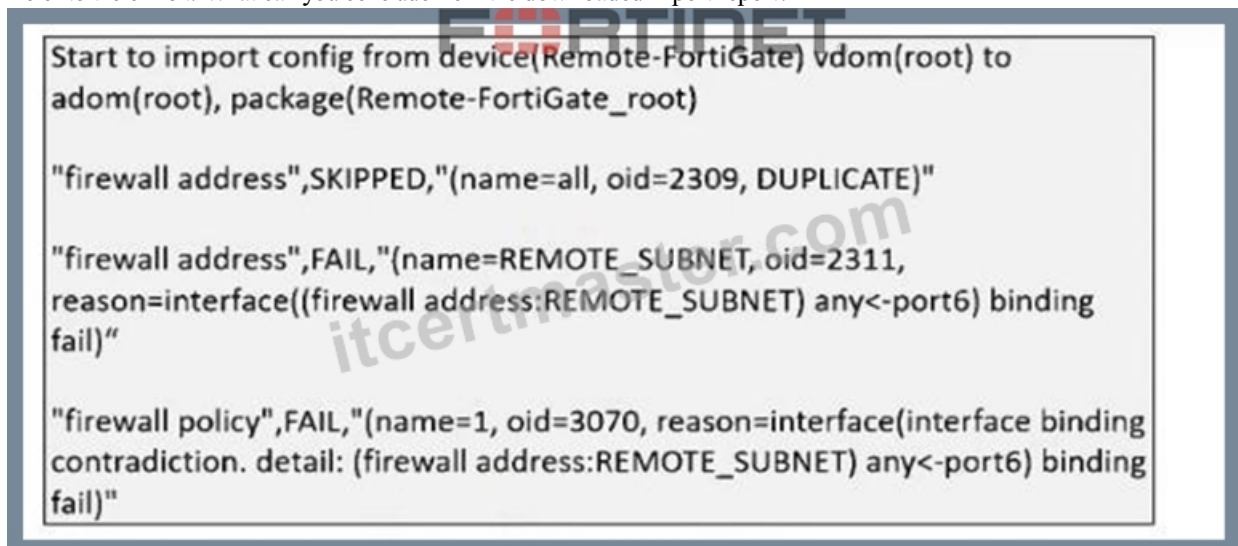

Answer: B,D

Explanation:
FortiManager must have the NAT device's IP address and correct ports configured to communicate properly with the FortiGate behind NAT.
The NAT device must have the correct virtual IP address and ports configured to allow push updates to reach the FortiGate device.

NEW QUESTION # 59
Refer to the exhibit. What can you conclude from the downloaded import report?

```
Start to import config from device(Remote-FortiGate) vdom(root) to
adom(root), package(Remote-FortiGate_root)

"firewall address",SKIPPED,"(name=all, oid=2309, DUPLICATE)"

"firewall address",FAIL,"(name=REMOTE_SUBNET, oid=2311,
reason=interface((firewall address:REMOTE_SUBNET) any<-port6) binding
fail)"

"firewall policy",FAIL,"(name=1, oid=3070, reason=interface(interface binding
contradiction. detail: (firewall address:REMOTE_SUBNET) any<-port6) binding
fail)"
```

- A. FortiManager will change the configuration of REMOTE_SUBNET to match the interface mapping coming in from Remote-FortiGate.
- B. As a result of this policy import process, FortiManager will create a new firewall address called REMOTE_SUBNET in the ADOM database.
- C. FortiManager does not support per-device mapping for firewall addresses.
- D. The administrator will see a new policy package named Remote-FortiGate_root in the FortiManager ADOM database.

Answer: D

Explanation:

The import report shows that a new policy package named Remote-FortiGate_root will be created in the FortiManager ADOM database, but some firewall addresses and policies failed to import due to interface binding conflicts.

NEW QUESTION # 60

Refer to the exhibits. An administrator must replace the source LAN interface in policy ID 2 on their FortiGateRugged-70F. However, when they try to install the policy package, they receive the error shown in the exhibit.

What should the administrator do to resolve the error?

Installation log

View Install Log

Copy device global objects

☐	4	FMG outside access	🖵 port6	🖵 port2	🖵 HQ-FMG-1	🖵 all	🕒 always	SSL no-inspection

Firewall policy package

- A. Use a metadata variable to dynamically assign an interface when this error occurs.
- B. Create a per0device mapping for the LAN interface.
- C. Replace LAN with lan1, which is supported by FortiGateRugged-70F models.
- D. Use the API to assign a system template interface forFortiGateRugged-70F model.

Answer: B

Explanation:
The installation error clearly states that the dynamic interface mapping for "LAN" is undefined for device HQ-NGFW-1 (a FortiGateRugged-70F). In the "Normalized Interface" view, "LAN" is a normalized name, but FortiGateRugged-70F uses "lan1" as the actual interface. To resolve the conflict, the administrator must create a per-device mapping linking the normalized interface "LAN" to "lan1" for the FortiGateRugged-70F device. This allows FortiManager to properly translate the interface name during policy installation.

NEW QUESTION # 61

......

For the FCP_FMG_AD-7.6 web-based practice exam no special software installation is required. because it is a browser-based FCP_FMG_AD-7.6 practice test. The web-based FCP - FortiManager 7.6 Administrator practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows. In the same way, IE, Firefox, Opera and Safari, and all the major browsers support the web-based Fortinet FCP_FMG_AD-7.6 Practice Test. So it requires no special plugins.
