

# C1000-189 Latest Test Braindumps | C1000-189 Pass4sure Pass Guide

BTW, DOWNLOAD part of DumpsActual C1000-189 dumps from Cloud Storage: [https://drive.google.com/open?id=1EiR3J7MUZ9vfRGudJj\\_okIT8QJOQ\\_Rg5](https://drive.google.com/open?id=1EiR3J7MUZ9vfRGudJj_okIT8QJOQ_Rg5)

Our company has authoritative experts and experienced team in related industry. To give the customer the best service, all of our company's C1000-189 learning materials are designed by experienced experts from various field, so our C1000-189 Learning materials will help to better absorb the test sites. One of the great advantages of buying our product is that can help you master the core knowledge in the shortest time. At the same time, our C1000-189 learning materials discard the most traditional rote memorization methods and impart the key points of the qualifying exam in a way that best suits the user's learning interests, this is the highest level of experience that our most authoritative think tank brings to our C1000-189 Learning Materials users. Believe that there is such a powerful expert help, our users will be able to successfully pass the qualification test to obtain the qualification certificate.

Unlike other kinds of exam files which take several days to wait for delivery from the date of making a purchase, our C1000-189 study materials can offer you immediate delivery after you have paid for them. The moment you money has been transferred to our account, and our system will send our C1000-189 training dumps to your mail boxes so that you can download C1000-189 exam questions directly. It is fast and convenient out of your imagination.

## C1000-189 Pass4sure Pass Guide - C1000-189 Reliable Exam Simulations

Though there are three versions of the C1000-189 practice braindumps: the PDF, Software and APP online, i love the PDF version the most for its printable advantage which is unique and special. After printing, you not only can bring the C1000-189 study materials with you wherever you go, but also can make notes on the paper at your liberty, which may help you to understand the contents of our C1000-189 Learning Materials. Do not wait and hesitate any longer, your time is precious!

## IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q18-Q23):

## NEW QUESTION # 18

When are issues or incidents triggered in Instana while using .Net sensor?

- A. During regular maintenance
- B. When a sensor goes offline
- **C. Based on failing health signatures or custom metric thresholds**
- D. When a user logs in

**Answer: C**

Explanation:

Instana triggers Issues and Incidents based on dynamic health signatures and custom metric thresholds established for .NET applications. The official documentation clarifies: "Issues are generated automatically when health signatures fail or when custom metric thresholds are breached for .NET sensors, indicating performance or reliability degradation." This includes transaction latency, error rates, resource exhaustion, or process failure detection. Health signatures are built-in, algorithmic checks using expected baselines and historical data. Custom thresholds may be established by users for business-specific metrics (e.g., request time or throughput), further enriching early warning detection. Offline sensors or regular maintenance only lead to downtime or muted alerts, not issues/incidents. User logins reflect authentication flow monitoring and do not prompt system-wide issues in Instana's event model unless login failure ties to health impacts.

## NEW QUESTION # 19

When installing the Instana host agent on Kubernetes, which option is valid?

- A. Binary
- B. Homebrew
- C. RPM
- **D. Operator**

**Answer: D**

Explanation:

The Instana Operator is the officially recommended and supported method for deploying the Instana host agent on Kubernetes clusters. The IBM Instana Observability documentation states, "The recommended method to install the Instana agent on Kubernetes clusters is via the Instana Operator, which uses Custom Resources to simplify lifecycle management." The Operator pattern in Kubernetes automates not just installation, but also upgrades, configuration, and management of agents across the entire cluster. This ensures security and reliability because the Operator reacts to cluster changes and can self-heal agent deployments. Other install options such as Homebrew, direct binary, or RPM are for traditional VM or bare-metal hosts-not for orchestrated container environments like Kubernetes. Only with the Operator does Instana support automated scaling, configuration through CRDs, and native Kubernetes best practices. Helm charts are also often involved in configuring the Operator, further streamlining agents' deployment in public, private, or hybrid cloud clusters.

## NEW QUESTION # 20

Which action triggers an event when a Synthetic PoP is uninstalled?

- A. Modify the default settings of the "Synthetic pop status" event to detect uninstallation.
- **B. Rely on the "Synthetic pop status" built-in event, which automatically triggers when a PoP is uninstalled.**
- C. Create a customized event using the Offline event detection system rule.
- D. Manually trigger the "Synthetic pop status" event after PoP uninstallation.

**Answer: B**

Explanation:

IBM Instana documentation describes automated event management for Synthetic Points of Presence (PoP). When a Synthetic PoP is uninstalled or goes offline, Instana's event model will automatically trigger the "Synthetic pop status" event. The verified statement found in the latest docs: "The 'Synthetic pop status' built-in event automatically triggers when a Synthetic PoP is uninstalled or taken offline, notifying administrators for actionable response." No manual intervention or custom rule creation is needed (A, B), and default event logic already covers all offline or removal states so configuration changes (D) aren't necessary. This ensures real-time visibility for operational teams to maintain synthetic coverage, immediately alerting when synthetic endpoint monitoring is compromised or reconfigured. Built-in event automation is an Instana best practice, limiting operational complexity and maintaining

compliance.

### NEW QUESTION # 21

What is the default context in which an action script sensor runs?

- A. Logged in Instana user
- B. Service agent
- C. Instana agent
- D. Container

**Answer: C**

Explanation:

Within Instana, action script sensors execute administrative or diagnostic commands in context of the runtime environment that hosts the Instana agent. The current IBM documentation specifies: "Action scripts are executed by the Instana agent process on the monitored host using the permissions and context of that agent." The agent serves as a self-contained runtime capable of executing defined scripts, invoking system-level or application-specific logic safely within its host boundary. This design enhances automation and extensibility while respecting host-level security because the execution does not escalate privileges beyond the agent's service account. Instana ensures that scripts running within the agent context inherit its environment variables and operational limits, guaranteeing consistency and preventing user-specific execution inconsistencies. Other answer options (service agent, container, or logged-in user) do not reflect the actual architectural control documented by IBM, where the primary host agent controls all action-based script invocations.

### NEW QUESTION # 22

Which protocol is used by the Grafana Plugin for Instana to fetch data?

- A. SOP
- B. HTTP
- C. JDBC
- D. gRPC

**Answer: B**

Explanation:

When integrating Grafana with Instana, the plugin communicates using RESTful interactions over the HTTP protocol. IBM's integration guide clearly explains: "The Instana DataSource Plugin for Grafana communicates with the Instana backend via HTTP-based REST APIs to query metrics and event data." This ensures secure TLS-encrypted data transport and allows compatibility with Grafana's native data source management features. HTTP is chosen due to its simplicity, standardization, and suitability for web API integrations, allowing Grafana to query time-series data from Instana and automatically populate dashboards. The plugin retrieves metrics, trace-level summaries, and service health states over HTTP GET and POST requests. Other options such as gRPC are used only internally between microservices, SOP is not a standard communication protocol, and JDBC is limited to databases. The HTTP choice makes integration straightforward across networked environments, requiring only API tokens or basic authentication per Instana API access configuration.

### NEW QUESTION # 23

.....

The APP online version of our C1000-189 real exam boosts no limits for the equipment being used and it supports any electronic equipment and the off-line use. If only you open it in the environment with the network for the first time you can use our C1000-189 Training Materials in the off-line condition later. It depends on the client to choose the version they favor to learn our C1000-189 study materials.
